Scheme and Subjects for the

Orissa Civil Services

Examination
SCHEDULE – II
[(Vide Rule 4(3)]

The Scheme of Examination

I. The Competitive Examination shall comprise as follows, namely :-

(i) Preliminary Examination,
(ii) Main Examination,
(iii) Personality Test or Interview.

II. Candidates who will qualify in the Preliminary Examination, shall be called by the Commission, to appear in the Main Examination. The qualifying marks in the Preliminary Examination shall be such as may be fixed by the Commission. The marks obtained in the Preliminary Examination shall not be counted for ranking. The Main Examination shall comprise Oriya Language, English, English Essay, General Studies-I & II papers, two optional subjects having two papers each as prescribed in Scheduled-III.

III. Candidates who obtain such minimum qualifying marks in the Main Examination as may be fixed by the Commission at their discretion shall be called for personality test. The personality test or interview shall carry 250 Marks and no minimum qualifying marks for personality test or interview shall be fixed.

Total marks thus obtained by the candidates in the written examination and personality test or interview would determine their ranking. Candidates shall be allotted to the various services keeping in view their ranks in the examination and the preferences indicated by them for various services.
SCHEDULE – III
[(Vide Rule 4(5)]
Scheme and subjects for the Examination

1 (A). The Preliminary Examination shall consist of two papers of objective type (Multiple choice questions) and each paper shall be of two hours duration –

<table>

### NOTE

(i) The scope of the syllabi for optional subject papers for the Preliminary/Main Examination is broadly of the Honours Degree level, i.e., a level higher than the Bachelors Degree and lower than the Masters Degree. In the case of Engineering and Law, the level corresponds to the Bachelors’ Degree.

(ii) The Preliminary Examination is meant to serve as screening test only. The marks obtained in Preliminary Examination by the candidates who are declared qualified for admission to main examination will not be counted for determining their final order of merit. The number of candidates to be admitted to the Main Examination would be 12 times of the total number of vacancies advertised. Only those candidates who are declared by the Commission to have qualified in Preliminary Examination against a particular advertisement will be eligible for admission to the Main Examination against the said advertisement.
2. **LIST OF OPTIONAL SUBJECTS FOR MAIN EXAMINATION**

1. Agriculture  
2. Animal Husbandry & Veterinary Science  
3. Anthropology  
4. Agricultural Engineering  
5. Botany  
6. Chemistry  
7. Civil Engineering  
8. Commerce & Accountancy  
9. Economics  
10. Electrical Engineering  
11. Education  
12. Fisheries Science  
13. Forestry  
14. Geography  
15. Geology  
16. Home Science  
17. History  
18. Indian Language & Literature (any one)  
   (a) Oriya, (b) Hindi, (c) Sanskrit, (d) English, (e) Persian, (f) Urdu.  
19. Law  
20. Management  
21. Mathematics  
22. Mechanical Engineering  
23. Philosophy  
24. Physics  
25. Political Science & International Relations  
26. Public Administration  
27. Psychology  
28. Sociology  
29. Statistics  
30. Zoology
Note (i) - Candidates shall not be allowed to opt for the following combinations of optional subjects.

a) Oriya, Hindi, Persian, Sanskrit, Urdu, English  
b) Civil Engineering, Mechanical Engineering, Electrical Engineering and Agricultural Engineering.  
c) Mathematics & Statistics  
d) Anthropology & Sociology  
e) Political Science & International Relations and Public Administration.  
f) Commerce & Accountancy and Management.  
g) Agriculture and Animal Husbandry & Veterinary Science.  
h) Management and Public Administration  
i) Education and Psychology  
j) Agriculture and Agricultural Engineering.

(ii) Each of the Papers i.e. Paper-I (Oriya language) and Paper-II (English) will be of Matriculation standard and shall be qualifying in nature. The marks obtained in these two papers shall not be counted for ranking.

(iii) The papers on Essay, General Studies and Optional Subjects of only those candidates shall be evaluated who attain such minimum standard as may be fixed by the Commission at their discretion for the qualifying papers in Oriya Language and English.

(iv) The question papers for the Main Examination shall be of conventional (essay) type.

(v) Candidates shall have to answer all the question papers except the Indian Languages paper in English.

(vi) The question papers other than Indian Language and Literature shall be set in English.

(vii) The details of syllabi are to be set out by the Commission.
3. **General instructions** –

(i) Candidates must answer the papers in their own handwriting and in no circumstances they will be allowed the help of a scribe to write the answer for them.

(ii) The Commission shall be competent to fix the qualifying marks in any or all the subjects of the examination.

(iii) If a candidate’s handwriting is not easily legible, a deduction will be made on this account from the total marks otherwise accruing to him.

(iv) Marks will not be allotted for mere superficial knowledge.

(v) Credit will be given for orderly, effective and exact expression combined with due economy of words in all subjects of the examination.

(vi) In the Question Papers, wherever necessary, questions involving the metric system of weights and measures only will be set.

(vii) Candidates shall use only international form of Indian numericals (i.e. 1, 2, 3, 4, 5, 6 etc.) while answering Question papers.

(viii) Candidates will be allowed the use of scientific (Non-programmable type) calculators at the conventional (Essay) type examination of O.P.S.C. Programmable type calculators will, however, not be allowed and the use of such calculators shall tantamount to resorting to unfair means by the candidates. Loaning or interchanging of calculators in the Examination Hall is not permitted.

Candidates are not permitted to use calculators for answering objective type papers (Test Booklets). They should not, therefore, bring the same inside the Examination Hall.

(ix) Candidates are not allowed to bring Mobile phones, pagers or any other communication devices into the premises of the Examination Centre and premises of the Commission.
4. **Personality Test/Interview** –

The candidate shall be interviewed by a Board to be constituted by the O,P,S.C. for the purpose. The said Board will have before them a record of his career. He will be asked questions on matters of general interest. The object of the interview will be to assess the personal suitability of the candidate for a career in public service. The object of test shall be to judge the mental caliber of a candidate, his intellectual qualities as well as social traits and his interest in current affairs. Further some of the qualities (to be judged will be) like mental alertness, critical powers of assimilation, clear and logical exposition, balance of judgment, variety and depth of interest, ability for social cohesion and leadership, intellectual and moral integrity, are to be judged by the said Board.
Syllabi for the
Orissa Civil Services
(Preliminary) Examination
(Subject-wise)
SYLLABUS FOR ORISSA CIVIL SERVICES (PRELIMINARY) EXAMINATION

**GENERAL STUDIES**

The nature and standard of questions in this paper will be such that a well-educated person will be able to answer them without any specialized study. The questions will be such as to test a candidate’s general awareness of a variety of subjects, which will have relevance for a career in Civil Services.

**General Science**

**Current events and developments of national and international importance.**

**History of India and Indian National Movement.**

**Indian and World Geography**

**Indian Polity and Economy.**

**General Mental Ability**

**General Science**

1. Questions on General Science will cover general appreciation and understanding of science including matters of everyday observation and experience, as may be expected of a well educated person who has not made a special study of any particular scientific discipline.

2. Questions also may be set covering facts relating to modern important scientific discoveries and prominent Indian Scientists and their contributions.

**Current events and Developments of national and international importance.**

In current events knowledge of significant state, national and international events will be tested.

**History of India and Indian National Movement**

1. In History of India emphasis will be on;

   a) General understanding on social, economic and political history of India.
   b) General understanding of socio-cultural and political history of Orissa.
2. Indian National Movement.
   a) Nature and character of the 19th century resurgence, growth of nationalism and attainment of independence.
   b) Freedom movement in Orissa, Oriya nationalism and Formation of Orissa Province.

**Indian and World Geography –**
Emphasis will be on Geography of India and Orissa. Questions are to be set on the following:

1. Physical, Social and Economic Geography of India.
2. Main features of Indian agriculture and natural resources.
4. Natural disasters in Orissa, - Flood and Cyclone.

**Indian Polity and Economy –**
Questions on Indian polity and economy will test the candidate’s knowledge on the following:

1. Indian Political system and Constitution of India.
2. Social system and economic development in India.
3. Local self Government – Urban and Rural Bodies in Orissa.
4. Orissa’s economic development during the Plan periods; Agriculture, Industry, Social Sector.

**General Mental Ability**

The candidates will be tested on reasoning and analytical abilities.
AGRICULTURE

Principles of economics as applied to agriculture. Farm planning and optimum resource-use efficiency and maximization of income and employment. Farm systems and their spatial distribution, their significant role in regional economic development. Intellectual property right in agriculture.
1. **Surveying:** Chain survey, compass survey, plane table survey, contour survey, estimation of area and volume of earth work.

2. **Fluid mechanics:** Fluid properties, types of flow and their properties, forces on plane and curved surfaces, stability of floating and submerged bodies, importance of Reynold’s number, Froude number in fluid flow phenomena, Chezy’s and Manning formula in design of flow channels.

3. **Irrigation:** Importance of irrigation in agriculture, soil-water-plant relationship, estimation of irrigation requirement of crops, irrigation efficiencies, types of irrigation, irrigation scheduling and on-farm-water management, types of pumps for irrigation and their criteria for selection, concept of participatory irrigation management and its advantages over traditional system.

4. **Drainage:** Drainage needs for crop production, types of drainage systems – surface drainage, subsurface drainage, vertical drainage and bio-drainage, laying of drainage system in cropped field, hydraulic conductivity and its measurement for drainage planning.

5. **Surface hydrology:** Hydrologic cycle, measurements of rainfall, evaporation and infiltration, estimation of runoff and factors affecting runoff. Basic, unit and complex hydrograph and their properties.

6. **Ground water Hydrology:** Occurrence of ground water and its movement, geologic formations and their properties in relation to availability of ground water, ground water investigation, ground water estimation and artificial recharge, types of wells and their hydraulics, method of construction of different types of wells including well development, augmentation of well yield, factors affecting drawdown in wells, quality of ground water for irrigation.

7. **Soil erosion and biological control measures:** Importance of soil conservation in crop production, problems of soil erosion in Orissa, types of soil erosion and their control – biological control like contour farming, strip cropping, buffer strip cropping, inter cropping, mulching.

8. **Soil erosion by mechanical control measures:** Mechanical control measures like contour bunding, graded bunding, bench terracing under different land situation. Gully control measures, vegetated water ways.
9. **Watershed management**: Importance of watershed management in rainfed and dry land areas, prioritization of watershed for treatment, land capability classification and crop planning in watersheds, water harvesting and recycling for crop production.

10. **Farm structures**: Planning of farmstead, farm house, farm road, farm fencing, farm gate, dairy farm, poultry house.

---

### Part - B

1. **Different sources of Farm power**: Human and Animal power, Mechanical power, Electrical power, power from water. Different types of engines and engine parts.

2. **Renewable sources of energy**: Energy from biomass, wind energy, types of wind mills & rotors, solar energy, geothermal, ocean thermal, tidal and wave energy, photovoltaic cells, Solar cookers, solar collectors and solar dryers.

3. **Non renewable sources of energy**: Energy from petroleum fuels, coal, natural gas etc.

4. **Land preparation equipments**: Tillage & tilth, Primary tillage and primary tillage tools, secondary, tillage and secondary tillage tools, land levellers and graders, earth moving equipment and bulldozers.

5. **Puddling**: Definition of puddling, objectives of puddling, puddling index, methods of puddling and types of puddlers.

6. **Seed drills and planters**: Difference between broad casting, seed drilling and planting types of seed drills and planters. Planting methods, calibration of seed drills and planters. Types of metering devices.

7. **Manure and fertilizer application**: Types and methods of application of manures and fertilizers. Types of manure and fertilizer application, metering devices.

8. **Plant protection equipments**: Different types of sprayers and dusters, spray pattern, MMD and VMD. Different types of dusters.

9. **Harvesting**: Different types of sickles, mowers, reapers and combines, different losses in combine, root crop and fruit crop harvesting equipments, threshing and winnowing methods, different types of threshers and winnowers.

10. **Grading and transportation**: Purpose of grading, different types of graders, grading methods, value addition, bullock cart, tractor and power tillers with trolley.
Part - C

1. **Psychometrics**: Different terminology in psychometrics and its relevance to agricultural products and its processing.

2. **Moisture Content**: Importance of moisture content. Various methods of determination of moisture contents in cereals, pulses, oil seeds.

3. **Drying**: Drying of cereals, pulses, oil seeds, methods of drying and types of dryers and fuels used for dryers. Design of dryer.

4. **Grain Processing**: Unit operations, processing of cereals, oil seeds and pulses, working principles of equipments for milling, mixing, cleaning and grading.

5. **Storage of Grains**: Storage parameters for grains. Different types of storage structures and material used for same.

6. **Processing of fruits & vegetables**: Properties of fruits and vegetables, process parameters and equipments for sorting, washing, handling, pealing, slicing, blanching, mixing and handling, chilling, packaging, transportation, storage and preservation.

8. **By-product utilization**: Properties of husk from rice and its utilization for fuel and manufacturing of other items. Utilization of other by-products from coconut, groundnut, cashew nut, sugarcane and fruits and vegetables etc.

10. **Food science**: Major nutrients serving as food for living cells, Biochemical changes during ripening and storage of fruits, grains, milk and milk products. Types of micro organisms – Algae, fungi, bacteria and viruses. Multiplication of bacteria, control of bacterial growth, pathogenic bacteria, food contaminations.
Animal Husbandry

5. **Animal Production**: (a) Artificial insemination, fertility and sterility. Reproductive physiology, semen characteristics and preservation. Sterility, its causes and remedies. (b) Meat, egg and wool production. Methods of slaughter of meat animals, meat inspection, judgment, carcass characteristics, adulteration and its detection, processing and preservation.; Meat products, quality control and nutritive value. By-products. Physiology of egg production, nutritive value, grading of eggs, preservation, packaging, transportation and marketing.

6. **Veterinary Science**: (i) Major contagious diseases affecting cattle, buffaloes, horses, sheep and goats, pigs, poultry, rabbits and pet animals. Etiology, symptoms,
pathogenesis, diagnosis, treatment and control of major bacterial, viral, rickettsial and parasitic infections.

(ii) Description, symptoms, diagnosis and treatment of the following :

(a) Production diseases of milch animals, pig and poultry.

(b) Deficiency diseases of livestock and birds.

(c) Poisonings due to infected/contaminated foods and feeds, chemicals and drugs.

8. 

(a) Poisons used for killing animals. Euthanasia.

(b) Drugs used for increasing production/performance efficiency, and their adverse effects.

(c) Drugs used to tranquilize wild animals as well as animals in captivity.

(d) Quarantine measures in India and abroad. Act, Rules and Regulations.

II. KEY TERMINOLOGIES AND DEFINITIONS: Culture, Culture Trait, Culture Complex, Culture Pattern, Culture Area, Acculturation, Enculturation, Society, Community, Group, Institution, Association, Band, Tribe, Caste, Animism, Shamanism,

III. SOCIAL INSTITUTIONS: Marriage, Family, Kinship, Clan, Moiety, Phratry, Lineage, Dormitory. Society, Culture and personality; Status and Role; Mechanical Solidarity and Organic Solidarity, Anthropology of Religion, Science of Mythology, Applied Anthropology, Social Stratification.

IV. PLESITOCENE PERIOD AND PREHISTORIC CULTURE: Geological and Archaeological Time Scale, Ice Age (causes & effects). Paleolithic, Mesolithic and Neolithic Cultures. Tool Types and Techniques.

VI. MAN’S PHYLOGENETIC POSITION: Man as a Primate, Anthropoidea, Hominoidea, Hominidae and Homo sapiens.

VII. HUMAN VARIATION: Concept of Race; Major Races, their characteristic features and distribution. Causes of variation.

VIII. ANTHROPOLOGICAL GENETICS: Concept of Gene, Chromosome, Hereditary Trait & their transmission, Genetic Variation in population.

X. ANTHROPOLOGICAL THOUGHT Natural Science Ideals in Anthropology; Humanistic Tradition in Anthropology; Anthropology, History and Natural history.

XI. THEORIES IN ANTHROPOLOGY: Evolutionism, Diffusionism, Neo Evolutionism, Functionalism, Structural – Functionalism, Structuralism.

XII. METHODOLOGY IN ANTHROPOLOGY: Cultural Relativism, Methods of Comparision of Anthropology, Emic and Etic approaches, Holistic Approaches in Anthropology, Unity and Diversity in Indian Society, Social Mobility and Social Change.
1. **Cell Biology**: Structure and function of cell wall and extra-cellular matrix, Cell membrane, Cytoplasmic organelles, Nucleus, Nucleolus, Chromosomes, Cell cycle, Mitosis and Meiosis, Regulation of cell cycle.

2. **Genetics, Molecular Biology and Evolution**: Laws of inheritance, Linkage and crossing over, Genetic mapping, Structural and numerical changes in chromosomes, Gene mutation and its molecular basis, Sex-determination, Sex-linked inheritance, Structure of nucleic acids, DNA replication, Gene expression - Transcription, Translation, Regulation of gene expression in prokaryotes. 

   Origin of earth and origin of life, Theories of organic evolution, Molecular basis of evolution.

3. **Biotechnology**: Plant cell, tissue and organ culture, Protoplast culture and somatic hybridization, Genetic engineering - Restriction enzymes and recombinant DNA technology, Biotechnology in agri-horticulture (Role of genetic engineering in crop improvement), Medicine and industry, Biofertilizer and biopesticides.

5. **Plant Physiology**: Concept of water potential, Diffusion, Osmosis, Absorption of water, Ascent of sap, Transpiration; Ion uptake, Active and passive uptake of solutes; Phloem transport; Nitrogen metabolism - Biological nitrogen fixation, Assimilation of nitrate and ammonia.

6. **Plant Biochemistry**: Enzymes – Nature, Classification, Properties, Kinetics, Mode of action, Allosteric enzymes; Photosynthesis – Light and Dark reaction (C3, C4 and CAM cycles), Photophosphorylation; Respiration – Glycolysis, Fermentation, Oxidative phosphorylation; Photorespiration; Role of isotopes in biochemical studies.
7. **Growth, Reproduction and Seed Biology**: Dynamics of growth, Growth movements, Growth substances, Photomorphogenesis, Physiology of flowering-photoperiodism and vernalization.

Vegetative, asexual and sexual methods of reproduction, Pollination and fertilization, Sexual incompatibility, Development, structure, dormancy and germination of seeds.

8. **Plant Pathology**: Diseases of rice, wheat, sugarcane, potato, mustard, groundnut and cotton crops. Factors affecting infection (host factors, pathogen factors, biotic factors like rhizosphere and phyllosphere organisms); Chemical, biological and genetic methods of disease control.

9. **Plant and Environment**: Biotic and abiotic components, Ecological adaptations, Types of vegetational zones and forests of India. Deforestation, afforestation, social forestry and plant introduction; Soil erosion, wasteland reclamation; Environmental pollution and its control (including phytoremediation); Bioindicators, Global warming.

10. **Biodiversity, Plant Genetic Resources**: Methods of conservation of plant genetic resources and its importance, Convention of Biological Diversity (CBD), Endangered, threatened and endemic taxa. Role of cell/tissue culture in propagation and enrichment of genetic diversity, Plants as sources of food, fodder, forage, fibres, oils, drugs, wood and timber, paper, rubber, beverages, spices, essential oils and resins, gums, dyes, insecticides, pesticides and ornamentation; Biomass as a source of energy.
1.1 **Atomic structure**: Schrödinger wave equation, significance of \( \Psi \) and \( \Psi^2 \). Quantum numbers and their significance, radial and angular probability, shapes of orbitals, relative energies of atomic orbitals as a function of atomic number. Electronic configurations of elements; Aufbau principle, Hund's multiplicity rule, Pauli's exclusion principle.

1.2 **Chemical periodicity**: Periodic classification of elements, salient characteristics of s, p, d and f block elements. Periodic trends of atomic radii, ionic radii, ionisation potential, electron affinity and electronegativity in the periodic table.

1.3 **Chemical bonding**: Types of bonding, overlap of atomic orbitals, sigma and pi bonds, hydrogen and metallic bonds. Shapes of molecules, bond order, bond length, V.S.E.P.R. theory and bond angles. The concept of hybridization and shapes of molecules and ions.

1.4 **Oxidation states and oxidation number**: Oxidation and reduction, oxidation numbers, common redox reactions, ionic equations. Balancing of equations for oxidation and reduction reactions.

1.5 **Acids and bases**: Bronsted and Lewis theories of acids and bases. Hard and soft acids and bases. HSAB principle, relative strengths of acids and bases and the effect of substituents and solvents on their strength.

1.6 **Chemistry of elements**:

(i) **Hydrogen**: Its unique position in the periodic table, isotopes, ortho and para hydrogen, industrial production, heavy water.

(ii) **Chemistry of s and p block elements**: electronic configuration, general characteristics properties, inert pair effect, allotropies and catenation. Special emphasis on solutions of alkali and alkaline earth metals in liquid ammonia. Preparation, properties and structures of boric acid, borates, boron nitrides, borohydride (diborane), carboranes, oxides and oxyacids of nitrogen, phosphorous, sulfur and chlorine; interhalogen compounds, polyhalide ions, pseudohalogenes, fluorocarbons and basic properties of halogens. Chemical reactivity of noble gases, preparation, structure and bonding of noble gas compounds.

(iii) **Chemistry of d block elements**: Transition metals including lanthanides, general characteristic properties, oxidation states, magnetic behaviour, colour. First row transition metals and general properties of their compounds (oxides, halides and sulfides) lanthanide contraction.
1.7 **Extraction of metals**: Principles of extraction of metals as illustrated by sodium, magnesium, aluminium, iron, nickel, copper, silver and gold.

1.8 **Nuclear Chemistry**: Nuclear reactions; mass defect and binding energy, nuclear fission and fusion. Nuclear reactors; radioisotopes and their applications.

1.9 **Coordination compounds**: IUPAC Nomenclature, isomerism and theories of coordination compounds and their role in nature and medicine.

1.10 **Pollution and its control**: Air pollution, types of air pollutants; control of air and water pollution; radioactive pollution.

**Section-B**

*(Organic Chemistry)*

2.1 **Bonding and shapes of organic molecules**: Electronegativity, electron displacements, inductive, mesomeric and hyperconjugative effects; bond polarity and bond polarizability, dipole moments of organic molecules; hydrogen bond; effects of solvent and structure on dissociation constants of acids and bases; bond formation, fission of covalent bonds: homolysis and heterolysis; reaction intermediates-carbocations, carbanions, Benzynes, Arynes, Enamines, free radicals and carbenes; generation, geometry and stability; nucleophiles and electrophiles.

2.2 **Chemistry of aliphatic compounds**: Nomenclature; alkenes-synthesis, reactions (free radical halogenation) -- reactivity and selectivity, sulfonation, detergents; cycloalkanes, Baeyer's strain theory; alkenes and alkynes, synthesis, electrohilic addition reactions, Markownikov's rule, peroxide effects, 1-3-dipolar addition; nucleophilic addition to electron-deficient alkenes; polymerisation; relative acidity; synthesis and reactions of alkyl halides, alkanols, alkanals, alkanones, alkanic acids, esters, amides, nitriles, amines, acid anhydrides, R ßunsaturated ketones, ethers and nitro compounds.

2.3 **Stereochemistry of carbon compounds**: Elements of symmetry, chiral and achiral compounds. Fischer projection formulae; optical isomerism of lactic and tartaric acids, enantiomerism and diastereoisomerism; configuration (relative and absolute); conformations of alkanes up to four carbons, cyclohexane and dimethylcyclohexanes-their potential energy. D, L-and R, S-notations of compounds containing chiral centres; projection formulae-Fischer, Newman and sawhorse of compounds containing two adjacent chiral centres; meso and dl-isomers, erythro and threo isomers; racemization and resolution; examples of homotopic, enantiotopic and diasteretopic atoms and groups in organic compounds, geometrical isomers; Ê and Z notations. Stereochemistry of SN1, SN2, E1 and E2 reactions.
2.4 **Organometallic compounds**: Preparation and synthetic uses of Grignard reagents, organo lithium compounds.

2.5 **Active methylene compounds**: Diethyl malonate, ethylacetoacetate, ethylcyanoacetate, applications in organic synthesis; tautomerism (keto-enol).

2.6 **Chemistry of aromatic compounds**: Aromaticity; Huckel's rule; electrophilic aromatic substitution: nitration, sulfonation, halogenation (nuclear and side chain), Friedel-Crafts alkylation and acylation, substituents effect; chemistry and reactivity of aromatic halides, phenols, nitro-, diazo-, diazonium-and sulfonic acid derivatives, benzyne reactions.

2.7 **Chemistry of biomolecules**: (i) Carbohydrates: Classification, reactions, structure of glucose, D, L-configuration, osazone formation; fructose and sucrose; step-up and step-down of aldoses and ketoses, and their interconversions, (ii) **Amino acids**: Essential amino acids; zwitterions, isolectric point, polypeptides; proteins; methods of synthesis of amino acids. (iii) Elementary idea of oils, fats, soaps and detergents.

2.8 **Basic principles and applications** of UV, visible, IR and NMR spectroscopy of simple organic molecules.

---

**Section-C**

(Physical Chemistry)

3.1 **Gaseous state**: Deviation of real gases from the equation of state for an ideal gas, van der Waals and Virial equation of state, critical phenomena, principle of corresponding states, equation for reduced state. Liquefaction of gases, distribution of molecular speed, collisions between molecules in a gas; mean free path, specific heat of gases.

3.2 **Thermodynamics**: (i) **First law and its applications**: Thermodynamic systems, states and processes, work, heat and internal energy, zeroth law of thermodynamics, various types of work done on a system in reversible and irreversible processes. Calorimetry and thermochemistry, enthalpy and enthalpy changes in various physical and chemical processes, Joule-Thomson effect, inversion temperature. Heat capacities and temperature dependence of enthalpy and energy changes.

(ii) **Second law and its applications**: Spontaneity of a process, entropy and entropy changes in various processes, free energy functions, criteria for equilibrium, relation between equilibrium constant and thermodynamic quantities.

3.3 **Phase rule and its applications**: Equilibrium between liquid, solid and vapours of a pure substance, Clausius-Clapeyron equation and its applications. Number of components, phases and degrees of freedom; phase rule and its applications; simple systems with one (water and sulfur) and two components (lead-silver, salt hydrates). Distribution law, its modifications, limitations and applications.
3.4 **Solutions** : Solubility and its temperature dependence, partially miscible liquids, upper and lower critical solution temperatres, vapour pressures of liquids over their mixtures, Raoult's and Henry's laws, fractional and steam distillations.

3.5 **Colligative Properties** : Dilute solutions and colligative properties, determination of molecular weights using colligative properties.

3.6 **Electrochemistry** : Ions in solutions, ionic equilibria, dissociation constants of acids and bases, hydrolysis, pH and buffers, theory of indicators and acid-base titrations. Conductivity of ionic solutions, its variation with concentration, Ostwald's dilution law, Kohlrausch’s law and its application. Transport number and its determination. Faraday's laws of electrolysis, galvanic cells and measurements of their e.m.f., cell reactions, standard cell, standard reduction potential, Nernst equation, relation between thermodynamic quantities and cell e.m.f., fuel cells, potentiometric titrations.

3.7 **Chemical kinetics** : Rate of chemical reaction and its dependence on concentrations of the reactants, rate constant and order of reaction and their experimental determination; differential and integral rate equations for first and second order reaction, half-life periods; temperature dependence of rate constant and Arrhenius parameters; elementary ideas regarding collision and transition state theory.

3.8 **Photochemistry** : Absorption of light, laws of photochemistry, quantum yield, the excited state and its decay by radiative, nonradiative and chemical pathways; simple photochemical reactions.

3.9 **Catalysis** : Homogeneous and heterogeneous catalysis and their characteristics, mechanism of heterogeneous catalysis; enzyme-catalysed reactions (Michaelis-Menten mechanism).

3.10 **Colloids** : The colloidal state, preparation and purification of colloids and their characteristics properties; lyophilic and lyophobic colloids and coagulation; protection of colloids; gels, emulsions, surfactants and micelles.
1. Engineering Mechanics: Units and Dimensions, SI Units, Vectors, Concept of Force, Concept of particle and rigid body. Concurrent, nonconcurrent and parallel forces in a plane, moment of force and Varignon's theorem, free body diagram, conditions of equilibrium, Principle of virtual work, equivalent force system.

First and Second Moments of area, Mass moment of Inertia.

Static Friction Inclined plane and bearings.

Part-B

**Geotechnical Engineering:** Types of soil, field identification and classification, phase relationships, consistency limits, particle size distribution, classification of soil, structure and clay mineralogy.

Capillary water and structural water, effective stress and pore water pressure, Darcy's Law, factors affecting permeability, determination of permeability, permeability of stratified soil deposits.

Seepage pressure, quick sand condition, compressibility and consolidation, Terzaghi's theory of one dimensional consolidation, consolidation test. Compaction of soil, optimum moisture content, Proctor Density.

Subsurface exploration, methods of boring, sampling, types of sampler, field tests.

Shear strength of soils, Mohr-Coulomb failure theory, shear tests Earth pressure at rest, active and passive pressures, Rankine's theory, Coulomb's wedge theory, earth pressure on retaining wall.

Bearing capacity, Terzaghi and other important theories, net and gross bearing pressure, Immediate and consolidation settlement.

Load carrying capacity of pile groups.

**Transportation Engineering:** Highway alignment, choice of layout and capacity of highways, location survey, geometric design of highways- various elements, curves, sight distance, grade separation and segregation of traffic, intersection design, highway materials and testing, subgrade and pavement components, types of pavements, road drainage.

Railway engineering - elements of permanent track- rails, sleepers, ballast and rail fastenings, tractive resistance, elements of geometric design- gradients and grade compensation on curves, cant, transition curves and vertical curves, stresses in railway tracks, points and crossings, signalling and interlocking, maintenance of railway track. Elements of Culverts and small bridges.

Airport Engineering - Classification of airports, selection of site, airport planning and control, airport marking and lighting systems.
Part-C

**Fluid Mechanics:** fluid properties, fluid statics, forces on plane and curved surfaces, stability of floating and submerged bodies.

**Kinematics:** Velocity, streamlines, continuity equation, accelerations, irrotational and rotational flow, velocity potential and stream functions, flownet, flow separation.

**Dynamics:** Euler's equation along streamline, control volume equation, continuity, momentum, energy and moment of momentum equation from control volume equation, applications to pipe flow, moving vanes, moment of momentum, Dimensional analysis.

Boundary layer on a flat plate, drag and lift on bodies. Laminar and Turbulent Flows. Laminar and turbulent flow through pipes, variation of friction factors, pipe networks, water hammer, and surge tanks.

**Open Channel Flow:** Energy and momentum correction factors, uniform and non-uniform flows, specific energy and specific force, critical depth, Friction factors and roughness coefficients, flow in transitions, free overfall, weirs, hydraulic jump, surges, gradually varied flow equations, surface profiles, moving hydraulic jump.

Part-D

**Environmental Engineering**

**Water Supply:** Estimation of surface and subsurface water resources, predicting demand for water, impurities of water and their significance, physical, chemical and bacteriological analysis, water borne diseases, standards for potable water.

**Intake of water:** Types of intake structures, pumping and gravity schemes, water treatment: principles of coagulation, flocculation and sedimentation; slow, rapid, pressure, filters; chlorination, softening, removal of taste, odour and salinity.

Water storage and distribution: storage and balancing reservoir types, location and capacity. Distribution systems: layout, hydraulics of pipe lines, pipe fittings, valves including check and pressure reducing valves, meters, analysis of distribution systems, leak detection, maintenance of distribution systems, pumping stations and their operations.
**Sewerage systems:** Domestic and industrial wastes, storm sewage-separate and combined systems, flow through sewers, design of sewers, sewer appurtenances, manholes, inlets, junctions, siphon. Plumbing in buildings.

**Sewage characterisation:** BOD, COD, solids, dissolved oxygen, nitrogen and TOC. Standards of disposal in normal water course and on land.

**Sewage treatment:** Working principles, units, grit chamber, sedimentation tank, trickling filters, oxidation ponds, activated sludge process, septic tank, disposal of sludge, recycling of waste water.

**Construction Management:** Elements and principles of Activity on Arrow (AOA) and Activity on Node (AON) networks and work breakdown structure. Interfaces. Ladder networks. Activity time. Time computations and floats. ATC and PTC trade-off. Work study and sampling. Scheduling principles-material schedules. ABC and EOQ analysis of inventory. Budgeting with barcharts. Working capital, CPM and PERT, probability of completion.

Elements of Engineering Economics, methods of appraisal, present worth, annual cost, benefit-cost, incremental analysis. Economy of scale and size. Choosing between alternatives including levels of investments. Project profitability.
PART – I

Accounting and Auditing

Unit-I - Conceptual Analysis

Nature, Scope and objective of accounting - Accounting as an information system, Users of Accounting Information, Generally Accepted Principles of Accounting – The Accounting Equation, Accrual concept – Other concepts and conventions.

Unit-II - Capital and Revenue :

Classification of receipts, Classification of payments, Classification of Incomes, Classification of expenditure as capital and Revenue.

Unit-III - Accounting Standards :

Accounting standards relating to Fixed Assets, Accounting standards relating to Depreciation, Accounting standard relating to Inventory and relating to Recognition of Revenue.

Unit-IV - Accounting for Finalisation of Accounts :

Final Accounts of sole proprietors, Final accounts of partnership firms, Final accounts of limited companies (statutory provisions)

Unit-V - Provisions and Reserves :

Nature & Types of Reserves, Provisions and Funds.

Unit-VI - Accounting for Non-Profit Making Organizations :

Accounting for non-profit making organizations such as Clubs, Educational Institutions, Hospitals, Charitable Institutions.
Unit-VII - Accounting for Partnership Firms:

Accounting problems relating to Admission and Retirement of a partner and Dissolution of firms.

Unit-VIII - Accounting for Shares and Debentures:

Unit-IX - Financial Statement Analysis.

Ratio Analysis relating to liquidity, solvency and profitability, Importance of Return On Investment (ROI) ratio in evaluating the performance of business entity.

Unit – X - Funds Analysis:

Statement of sources and application of funds and cash flow statement.

Unit – XI - Auditing:

Nature, objective, principles and techniques, planning an audit,(Audit programme, working papers and audit process), Evaluation of Internal Controls, Internal and management audit.

Unit-XII - Cost Accounting:

Cost concepts and classification, Elements of cost and Computation of total cost.
PART – II

Business Organization and Management

Unit – I - Forms of Organisation:
Distinctive features of different forms of business organizations, sole proprietorship, partnership – Characteristics, Registration, Partnership deed, Rights and Duties, Retirement, Dissolution.

Unit – II - Corporate and other forms of Organisation:
Joint Stock Company - Concept, Characteristics, Types Co-operative and State ownership forms of organization.

Unit – III - Securities:

Unit – IV - Capital Market:
Economic functions of the capital market (Stock Exchange), Concept and functions of Mutual Funds, Control and regulation of capital market (SEBI).

Unit – V - Business Combinations:

Unit – VI - Foreign Trade:
Procedure of Import and Export, Financing of Import and Export, Incentives for export promotion.

Unit – VII - Insurance:
Principles and Practice of Life, Fire, Marine and General Insurance.
Unit-VIII - Management Function:

Planning – Strategies; Organising, levels of authority, staffing, line and staff function, Organization structure - centralization and decentralization, Delegation of Authority, Span of Control, Management by Objective (MBO), Management by Exception (MBE).

Direction – Principles and Strategies.

Control – Principles, Performance standards, Corrective action.

Unit – IX - Office Management and Management of Change:

Office Management – Scope and principles, systems and routines Handling of records, modern aids to office management, office equipment and machines Automation and personal computers, Impact of Organization and Methods (O & M). Crisis Management

Unit – X - Company Law:

Unit – XI - Accounts and Audit:

Law relating to Accounts and Audit of Companies.

Unit – XII - Company Secretary:

Role, functions, qualifications and appointment of Company Secretary.
Part-I

General Economics

1) **Micro-economics**: (a) Production Function: laws of returns and returns to scale; (b) Consumption and Demand: Elasticity concepts; (c) Market Structure and conditions of equilibrium; (d) Determination of prices under Perfect Competition, Monopoly and Monopolistic Competition; (e) Theory of Distribution: Marginal Productivity Theory; (f) Elementary concepts of Welfare Economics: Consumer’s Surplus, Private and Social Products; Pareto-optimality.

2) **Macro-economics**: (a) National Income Concepts; (b) Determinants of National Income and Employment; (c) Determinants of Consumption, Savings and Investment; (d) Rate of Interest and its determination.

3) **Money, Banking and Public Finance**: (a) Concepts of Money and measures of money supply; (b) Banks and credit creation; Banks and portfolio management; (c) Central Bank and control over money supply; (d) Inflation, its causes and remedies; (e) Public Finance: Budget, Taxes and non-tax revenues—Types of Budget deficits.

4) **International Economics**: (a) Theories of International Trade—comparative costs—Heckscher-Ohlin; Gains from Trade and Terms of Trade.

(b) Free Trade and Protection.

(c) Balance of Payments accounts.

(d) Exchange rate under free exchange markets.

(e) Evolution of the International Monetary System and World Trading order—The Brettonwoods system, IMF and the World Bank and their associates.
Floating rates-GATT and WTO

(5) **Growth and Development** : (a) Meaning and measurement of growth; growth, distribution and Welfare; (b) Characteristics of underdevelopment; (c) Stages of Development; (d) Sources of growth-capital, human capital, population, productivity, Trade and aid, non-economic factors; growth strategies – balanced and un-balanced.

(6) **Economic Statistics** : Types of averages-measures of dispersion-correlation-Index numbers; types, uses and limitations.

**Part-II**

**Indian Economics**

1. Main features; Geographic size-Endowment of natural resources, Population; size, composition quality and growth trend-Occupational distribution

3. Growth in income and employment since Independence-Rate, Pattern, Sectoral trends-Distributional Changes-Regional disparities.

4. Economic Planning in India : goals, achievements and shortfalls; planning and market.

5. Broad fiscal, monetary, industrial, trade and agricultural policies-objectives, rationale, constraints and effects.
Unit – I: Education & its Role:

Education as a process

Education and Schooling

Education for National Development and International Understanding.

Education and Society

Education and Culture

Education and Politics

Education and religion.

Unit – II: Development of Education after independence

Indian Education Commission, 1964-66

National Education Policy 1968

National Policy on Education, 1986

Unit – III: Trends in Education.

Constitutional provisions for Education

State, Centre relationship for development of Education

Education for the socially and economically disadvantaged sections of the society- S.C., S.T. & Women.
Unit – IV: Psychological Foundations of Education

Growth and Development, principles

Factors affecting growth and development

Dimensions of development – Physical, Mental, Social, Emotional, Moral.

Intelligence: Nature, SI Model, Multiple intelligences.

Personality: Approaches to personality study; Trait, Type and Psychodynamic.

Unit – V: Learning Theories and Principles.

Learning – Concept and principles

Theories of learning – Conditioning, Trial and Error,

Gagnes’s Hierarchical learning, Blooms Mastery Learning Constructivism.

Motivation – Concept, Types and Techniques for motivating the learners.

Transfer of learning – Theories, Role of teacher in maximum transfer.

Role of Technology in learning.

Unit – VI: Issues in Education.

Concept, need, process of the followings:

Population Education: Adolescent Education, Family life and sex
Education
Health and Nutrition Education

Environmental Education
Value and Peace oriented Education.

Adult and Non-formal Education.
Unit – VII : Trends in Education.

Distance Education

Life long and continuing Education

Vocational Education

Education for All

Programmes of TIC, NLM, PLC, JSN, NFE & AE, DPEP & S.S.A.

Work Experience /SUPW.

Information and communication Technology – Meaning, Nature & Scope.

Unit – VIII : Evaluation in Education

Educational Evaluation – Meaning & Scope

Types of Evaluation – Placement, Formative, Diagnostic & Summative.

Continuous and comprehensive Evaluation.

Use of computer in Evaluation,

Orissa Examination Act, 1988

Problems of Present Evaluation system.

Unit – IX : Administration, Management and Supervision in Education.

Concept of Administration, Management and Supervision.

Structure and Functions of UGC, NAAC, NCERT, NCTE, NIEPA, CBSE, CABE, AICT, ICSSR.

SCERT, SRC for A.E., SIET, BSE, CHSE of Orissa.

Sources of Financing at different levels of Education.
Unit – X : Educational Statistics.

Need of Statistics for a Teacher

Measures of Central Tendencies - Mean, Median & Mode

Measures of Variability

Standard scores – Properties and uses.

Normal probability curve – Properties and applications.
ELECTRICAL ENGINEERING

Electrical Circuits—Theory and Applications

Circuit components, network graphs, circuit analysis methods: nodal analysis, mesh analysis; basic network theorems and applications; transient analysis: circuits with a.c. and d.c. inputs; sinusoidal steady state analysis; resonant circuits and applications; coupled circuits and applications; balanced 3-phase circuits. Two port networks, driving point and transfer functions; poles and zeros of network functions.

Signals & Systems

Representation of continuous-time and discrete-time signals; LTI systems; convolution; impulse response; time-domain analysis of LTI systems based on convolution and differential/difference equations. Fourier transform, Laplace transform, Z-transform, Transfer function. Sampling and recovery of signals.

Control Systems

Elements of control systems; block-diagram representations; open-loop & closed-loop systems; LTI systems: time domain and frequency domain analysis. Stability: Routh Hurwitz criterion, root-loci, Nyquist's criterion. Bode-plots, Design of lead-lag compensators; Proportional, PI, PID controllers.

E.M. Theory

Electro-static and magneto-static fields; Maxwell’s equations; electromagnetic waves and wave equations; wave propagation and antennas; transmission lines; microwave resonators, cavities and wave guides.

Electrical Engineering Materials

Analog Electronics

Digital Electronics

Boolean algebra; minimisation of Boolean function; logic gates, digital IC families (DTL, TTL, ECL, MOS, CMOS). Combinational circuits: arithmetic circuits, code converters, multiplexers and decoder's. Sequential circuits: latches and flip-flops, counters and shift-registers. Comparators, timers, multivibrators. Sample and hold circuits; ADCs and DACs. Semiconductor memories.

Communication Systems

Computers and Microprocessors

Computer organization: number representation and arithmetic, functional organization, machine instructions, addressing modes, ALU, hardwired and microprogrammed control, memory organization. Elements of microprocessors: 8-bit microprocessors -architecture, instruction set, assembly level programming, memory, I/O interfacing, microcontrollers and applications.

Measurement and Instrumentation

Error analysis; measurement of current voltage, power, energy, power-factor, resistance, inductance, capacitance and frequency. Electronic measuring instruments: multimeter, CRO, digital voltmeter, frequency counter, Q-meter, spectrum-analyser, distortion-meter. Transducers: thermocouple, thermistor, LVDT, strain-guages, piezoelectric crystal. Use of transducers in measurement of non-electrical quantities. Data-acquisition systems.
**Energy Conversion**

**Power Systems**

Electric power generation: thermal, hydro, nuclear. Transmission line parameters: steady-state performance of overhead transmission lines and cables. Distribution systems, Insulators, bundle conductors, corona and radio interference effects; per-unit quantities; bus admittance and impedance matrices; load flow; active and reactive power control. Economic operation. Principles of overcurrent, differential and distance protection; solid state relays, circuit breakers, Grounding Concept of system stability. HVDC transmission.

**Power Electronics and Electric Drives**

Semiconductor power devices: diode, transistor, thyristor, triac, GTO, IGBT and MOSFET, static characteristics, principles of operation; triggering circuits; bridge converters—fully controlled and half controlled; principles of chopper and inverter. Basic concept of speed control of DC and AC motor drives.

**Elements of IC Fabrication Technology**

Overview of IC Technology. Unit steps used in IC fabrication: wafer cleaning, photo-lithography, wet and dry etching, oxidation, diffusion, ion-implantation, CVD and LPCVD techniques for deposition of poly-silicon, silicon, silicon-nitride and silicon dioxide; metallisation and passivation.
FISHERY SCIENCE

1. General Fisheries: Role of fisheries and aquaculture in Indian economy and human health. Fisheries resources of India. Utilization of different aquatic resources for fish production. Geographical distribution of fishes in India. Fisheries education and research in India. Organisational setups in fisheries development at national and international context. Frontier research and global scenario in fisheries and aquaculture. Growth and development of fisheries and aquaculture during different plan periods in India; Fisheries and Aquaculture Regulatory Acts. Disaster awareness related to fisheries and aquaculture.

2. Fishery Resource Management: Inland, marine and estuarine capture fishery resources of India. Catch statistics; Major Indian river systems, reservoirs and lacustrine fisheries. Conservation and management of inland, marine and reservoir fisheries. Fishery resources of exclusive economic zone. Maximum sustainable yield; Maximum economic yield; Catch per unit effort; Mortality, Exploitation rate and ratio; Fisheries regulation; Potential fishing zone, major exploited marine fisheries of India and their present status. Survey and evaluation system of aquatic resources. Fisheries legislation - International, National and State.

5. **Fish seed production and management**: Bundh and happa breeding, hypophysation techniques, synthetic agents and their principles in induced breeding. Types of hatcheries. Seed production and hatchery management of Indian major carps, exotic carps, air breathing fishes, common ornamental fishes, mahaseer, trouts, seabass, mullets, milkfish, groupers, fresh water prawns, shrimps and crabs. Brood stock management of fishes, prawn and shrimp. Nursery management for seed raising in carps, prawns and shrimps.

1. **Forest**: Its role in Natural Ecosystem Management, Land use and extent of Forests in India, Need for conservation of existing forests and scope of Extension Forestry in India.

2. **Effect of Locality Factors on Vegetation**: Climatic (light, Temperature, Precipitation and wind) Edaphic (Soil and Geology, soil conditions influencing plant growth) and Biotic factor (Man, Animal, Bird and Micro organisms).

3. **Forest Classification and Distribution**: Basis for classification of Indian Forest, Forest Types in India and Orissa, Phytogeographic regions of India.

Section-A
Physical Georgraphy

i) Geomorphology : Origin of the earth; Interior of the earth; Types and characteristics of Rocks & Soils; Folding and Faulting; Volcanoes; Earthquakes; Landforms caused by fluvial, aeolian and glacial actions.

ii) Climatology : Structure and composition of atmosphere; Temperature; Pressure belts and Wind systems; Clouds and rainfall types; Cyclones and anti-cyclones; Major climatic regions.

iii) Oceanography : Ocean relief; Temperature; Salinity; Ocean deposits; Ocean currents, Waves and Tides.

iv) Biogeography : Major biomes of the world; Ecosystem and food chain; Environmental degradation and conservation. Disaster management.

Section-B
Human Geography

i) Man and Environment Relationship
Concepts of Determinism and Possibilism. Major cultural realms of the world.

ii) Population
Races of mankind and tribes; growth and distribution of world population; migration; population problems of developed and developing countries.

iii) Economic Activities
Food gathering and hunting; pastoral herding; fishing and forestry; Types of agriculture-shifting, subsistence, commercial and plantation; Mining, Power; Manufacturing - locational factors of textile, iron and steel, sugar and fertilizer industries; Trade, transport, communication and services.

iv) Settlements
Origin, types and patterns of rural and urban settlements; Processes of urbanisation; Morphology and functional classification of towns;
Section-C - Geography of the World

i) Major Natural Regions: Characteristics, economic base and human adaptation.

ii) Regional Geography of Developed Countries: U.S.A., Japan, Australia

iii) Regional Geography of Developing Countries: China, Brazil and Egypt.

Section-D - Geography of India

i) Physical Setting: Landforms, drainage, climate, soils and natural vegetation.

ii) Economic Base: Minerals – Iron ore, Bauxite, Limestone & Gypsum, Energy resources- Coal, Petroleum, Hydel Atomic, Aquatic resources, Forest resources; Irrigation, Agriculture and Industries; (Textile, Iron & Steel, Paper and Fertilizer), Trade and commerce.

iii) Population: Growth, distribution and density; demographic characteristics.

Section-E - Geographical Thought

i) Ancient Period: Contributions of Indians, Greeks, Romans and Arabs.

ii) Pre-Modern Period: Contribution of Kant, Humboldt and Ritter.

iii) Modern Period: Dichotomy of determinism and possibilism; contributions of Ratzel, Huntington and La Blache.

iv) Recent Period: Quantitative Revolution; Radicalism, Behaviouralism and Humanism.

Section-F - Techniques of Geographical Analysis

i) Maps: Scale and types, uses.

ii) Diagrams: Types and uses’

iii) Projections: Types, characteristics and uses.

iv) Remote sensing and Geographical Information System (GIS): Aerial photographs and imagery, GIS.
GEOLOGY

Part-I

Topographic maps and their interpretation. Use of clinometer compass in the field. Measurements of bed, foliation, folds, joints, faults and lineations in the field. Principles of geological mapping. Effects of topography on outcrops. Drawing of sections.

Part-II

(a) **Crystallography**: Laws of crystallography. Symmetry elements and forms of normal classes of seven crystal systems. Twinning.

(b) **Mineralogy**: Physical, chemical and optical properties of the following common rock forming minerals: quartz, feldspar, mica, pyroxene, amphibole, olivine, garnet, carbonates, aluminosilicates. Structure of silicates. Crystal chemistry of minerals - Polymorphism, Isomorphism.

(c) **Economic Geology**: Ore mineral and gangue. Classification of mineral deposits. Processes of formation. Occurrence, origin and distribution in India of the ores of aluminium, chromium, copper, gold, lead, zinc, iron, manganese and radioactive elements. Deposits of minerals used as abrasives, refractories and in ceramics. Deposits of coal and petroleum. Prospecting for mineral deposits.
Part -III

(a) **Igneous Petrology** : Origin of magma and formation of igneous rocks. Bowen's reaction principle. Crystallisation of binary systems. Classification of igneous rocks. Textures and structures of igneous rocks. Composition, origin and mode of occurrence of granite, syenite, diorite, mafic and ultramafic rocks, anorthosites and alkaline rocks.

(c) **Metamorphic Petrology** : Types and factors of metamorphism. Zones, grades and facies of metamorphism. Regional and contact metamorphism. Textures and structures of metamorphic rocks. Metamorphism of argillaceous, arenaceous, calcareous and basic rocks. Metasomatism.

---

**Part-IV**

Section-A

1. Prehistoric cultures: Old Stone Age, New Stone Age.
3. Vedic society. The Vedic texts; change from Rig Vedic to later Vedic phases. Religion; Upanishadic thought. Political and Social organisation; evolutions of monarchy and Varna system.
4. State formation and urbanization, from the mahajanapadas to the Nandas. Jainism and Buddhism. Factors for the spread of Buddhism.
5. The Mauryan Empire: Chandragupta; Megasthenes’ Account Asoka and his inscriptions; his dhamma, administration, culture and art. The Arthasastra.

Section-B

10. Cultural trends, (750-1200) : Religious conditions : importance of temples and monastic institutions; Sankaracharya; Islam; Sufism. Literature and Science. Alberuni’s "India". Art and architecture.

Bhakti movement: Kabir, Nanak, Chaitanya.

**Section-C**

18. Economic Impact of the British Raj: Drain of Wealth land revenue settlements (zamindari, ryotwari, mahalwari); Deindustrialisation; Railways and commercialisation of agriculture; Growth of landless labour.

Resistance to British rule: The 1857 Revolt- causes, nature, course and consequences.

21. Gandhi and his thought; Gandhian techniques of mass mobilisation-Khilafat and Non Cooperation Movement, Civil Disobedience and Quit India Movement; Other strands in the National Movement-Revolutionaries, the Left, Subhas Chandra Bose and the Indian National Army.

Section – A Food & Nutrition

3. Balanced diet, Basic food groups (Basic five, basic seven) planning of balanced diet on the basis of recommended dietary allowance (ICMR) for adult man and woman on the basis of activities; (Sedentary, Moderate & Heavy).

Section – B Child Development & Family studies.

1. Meaning & principles of growth and development prenatal growth and development: conception, stages of prenatal growth and development, factors affecting prenatal growth and development.

2. Developmental milestones from birth to Two years physical development – growth cycle, body size, body proportion, bones, muscles & teeth development, motor development – principles and sequence of motor development & motor skills.

5. Marriage; definition, function, types of marriages, (arranged and love) with their advantages and disadvantages factors to be considered in the selection of marriage partner.

6. Family : structure, characteristic and function of family, types of family (joint, nuclear and extended) - their advantages and disadvantages, changes in family system, causes, features and factors contributing to change.

Section C – Family Resource Management.

1. Concept of Home Management – Importance of Home Management, family goals, values standards and decision making process. The qualities of a good home maker.

2. Types of family resources and their management : Management of time – methods & techniques of time management, money management – Types of income, planning and steps in budget preparation, Engel’s law of consumption, keeping financial records & accounts, savings and investments.

3. Management of energy : Energy requirement of different tasks, fatigue – type and how to reduce fatigue, techniques of work simplification.

4. Housing : Selection of sites, principles of house planning Different types of building components and materials. Housing problems and housing schemes.

5. Interior decoration : Basic elements (line, form, colour, texture) and principles (Balance, Rhythm, Proportion, harmony, emphasis) of design and their application in interior decoration.

Section D – Textile & Clothing.

1. Textile fibers : Classification of textile fibers, according sources and chemical composition, manufacturing process, physical and chemical properties of cotton, wool, silk.

3. **Finishing**: Objectives and types of different finishes (Calendering, Mercerizing, Sanforizing, Tetering, Weighting, Napping, Glazing Sizing, Bleaching, Embossing, Moiring).

4. **Dyeing & Printing**: Importance of dyeing & printing, different methods of dyeing and printing used in textile.

5. **Care of clothing**: Methods laundering and their principles laundry reagents and their function. Care of clothing - cotton, silk and wool, storage of clothes.

6. **Apparel Designing**: Role of clothing in personality development. Factors influencing choice of clothing for different age group. Elements (Line, Form, Texture, Colour) and principles (Balance, Proportion, Emphasis, Rhythm and proportion).

**Section E  Home Science Extension Education.**

1. **Extension Education**: Concept, philosophy, objectives and scope of extension education. Role and qualities of extension worker. Need for Home-Science Extension Education.

2. **Communication in Extension**: Principles of learning and teaching process, steps in extension teaching. Extension teaching methods (individual, group & Mass) factors involved in the selection of appropriate method.

3. **Audio-visual aids**: Meaning & types of audio aids, visual aids and audio-visual aids in extension teaching. Other teaching aids. Puppet show, Dramatization, Folk songs, Dances, Charts, Posters.

4. **Community Development**: Concept, principles and objectives of community development. Subject matter of community development, Major elements involved in India’s community development and extension process.

5. **Extension programmes**: Role of formal and informal institutions and agencies in Extension education and community Development. (CDP, IRDP, ICDS, DWACRA, ICAR, DRDA, NABARD, KBKs, ATMA, SHGs).

6. **Community Developmental Programmes**: Objectives, philosophy, principles and types of community development programmes, Impact of community development programmes in rural life in India.
I Jurisprudence
2. Schools of Jurisprudence:
   i) Natural law
   ii) Analytical
   iii) Historical
   iv) Sociological
   v) Realist.
3. Theories of punishment.
4. Sources of Law:
   (i) Custom, (ii) Legislation and (iii) Precedent.
5. Legal concepts:
   (i) Rights and duties
   (ii) Ownership and Possession
   (iii) Legal personality.

II Constitutional Law of India
1. Preamble and nature of Indian Constitution
2. Fundamental Rights
3. Directive Principles and Fundamental Duties
4. Constitutional position and powers of President and Governors
5. Supreme Court and High Courts: Jurisdiction, powers, appointment and transfer of Judges
6. Union Public Service Commission and State Public Service Commissions
8. Amendment of the Constitution
III International Law:
1. Nature and definition of International Law
2. Sources: Treaty, Custom, General Principles of Law recognised by civilised nations and subsidiary means of determination of law
3. State Recognition and State Succession
4. The United Nations, its objective, purpose and principal organs:
   General Assembly & Security Council
5. Protection of Human Rights:
   (i) Provisions in the UN Charter
   (ii) Universal Declaration of Human Rights, 1948
   (iii) Convention on Elimination of All Forms of Discriminate Against Women (CEDAW)

IV Torts:
1. Nature and Definition of Tort
2. Liability based on fault and strict liability
3. Vicarious Liability including State Liability
4. Joint Tort feasors
5. Negligence
6. Defamation
7. Conspiracy
8. Nuisance
9. False imprisonment
10. Malicious Prosecution.

V Criminal Law:
1. General Principles of criminal liability: Mens rea and actus reus
2. Stages of Crime: Preparation and criminal attempts
3. General Exceptions
4. Joint and constructive liability
5. Abetment
6. Criminal Conspiracy
7. Sedition
8. Murder and culpable homicide
9. Theft, extortion, robbery and dacoity
10. Misappropriation and Criminal Breach of Trust.

VI Law of Contract:

1. Definition of contract
2. Basic elements of contract: Offer, acceptance, consideration, contractual capacity
3. Factors vitiating consent
4. Void, Voidable, illegal and unenforceable agreements
5. Wagering agreements
6. Contingent contracts
7. Performance of contracts and Impossibility of performance
8. Discharge of contractual obligations
9. Quasi-contracts
1. **Managerial Function**: Evolution of management thought – From classical to modern school, Formulation of organizational vision, Mission and objectives, Managerial functions – Planning, Organising, Coordination, Motivation, Staffing, Directing and Control, Formulating Strategies, Generic strategies.

2. **Organizational Behaviour and Design**: Theories of motivation, Hierarchy of need model, Factor theory, sources of motivation – achievement, power, money, affiliation, Communication : Barriers and gateways, Leadership - Characteristics, transformational leader and transactional leader, Leader as change agents, Understanding group behavior and dynamics - behaviour in small groups.

4. **Management Control System**: Basic concepts of management control system, Responsibility centres : cost centres, profit centres and investment centres, managing discretionary costs, transfer pricing, basis for fixing transfer pricing.

7. **Financial Management**: Goals of finance function, ratio analysis, break even analysis, funds flow analysis, financial and operating leverage, management of working capital : overview and estimation, time value of money, NPV and IRR methods of capital budgeting.

8. **Marketing Management**: Marketing-mix - Product management, segmentation, targeting, positioning, marketing communication, pricing
decisions, distribution channels and logistics, ethics in marketing – consumer protection.

9. **Corporate Governance**: Corporate Governance, Social responsibility of business, Code of Conduct, Social cost-benefit analysis - different approaches to SCBA, Corporate Communication.

10. **Operation and Materials Management**: Supply chain management – vendor evaluation and audit, make or buy decisions, inventory control – EOQ model, ABC analysis, Valuation of inventories - different methods.

11. **Management Information System**: Conceptual foundations of information systems, overview of systems analysis and design, system development, management of software development life cycle.

12. **Human Resource Development**: Manpower planning, recruitment, selection, training, development, promotion and transfer, performance measurement, balanced score card and other methods, job evaluation and enrichment.
1. **Logic**:

Statements, Truth values, Connectives, Tautology, Inferences, Methods of Proof.

2. **Set Theory**:

Set operations, Algebra of sets, D’ Morgan’s laws, Sub set, Power set, Product of sets, Principles of Mutual inclusion and exclusion.

3. **Relation and function**:

(i) Relation, Binary, Domain, Range, Properties of relation, Equivalence relation, Partial order relation, Poset, Lattice

(ii) Function, One-one, Onto functions, Bijective, Inverse, Composite functions, Absolute value function, Step function, Exponential, Trigonometric, Logarithmic functions.

4. **Real and complex numbers**:

(i) Real numbers : Natural numbers, Integers, Rational, Irrational, Real numbers, Algebra of Real numbers, Order relation in real numbers, Countability, Uncountability, Real sequences, Series, their Convergence.

(ii) Complex numbers : Algebra of complex numbers, Argument, Modulus, Inverse, Demoivre’s Theorem and Applications.

5. **Matrices**:

6. **Combinatorics and probability**:

(i) Counting Principles, Permutations, Different type of Permutations, Combinations, Binomial Theorem.

(ii) Definition, Axioms of probability, Independent events, Baye’s law.

7. **Differential calculus**:
Limit, Continuity, Derivatives, Higher order derivatives, Tangent, Normal, Increasing, Decreasing functions, Maxima, Minima, Rolle’s Theorem, Mean value Theorems, Taylor’s Theorem, Partial Differentiation, Euler’s Theorem.

8. **Integral calculus:**

Integration as reverse process of differentiation, Definite Integral, Methods of integration, Area under plane curves.

9. **Differential Equation:**

Order, Degree of O.D.E., First order Differential equation, Their solutions, Higher order differential equation with constant coefficients, Their solutions.

10. **2-Dimensional Geometry:**

Preliminaries, Straight lines, Circles, Pair of lines, Parabola, Ellipse, Hyperbola.

11. **3-Dimensional Geometry and vectors:**

(i) Preliminaries, Direction cosines, Planes, Lines, Sphere, Tangent plane to spheres.

12. **Mechanics:**

(i) Statics: Force, Parallelogram law of Forces, Equilibrium of forces, Moments, Couples, Friction, Centre of Mass.
(ii) Dynamics: Laws of Motion, Kinematics, D’Alembert’s principle, Motion of a particle in Plane, Projectile, Moment of Inertia of plane bodies.

13. **Group:**

Properties of groups, Permutation group, Cyclic group, Sub-group, Lagrange’s Theorem, Counting principles, Normal sub-groups, Homomorphism and Isomorphism.

14. **Rings and Fields and Vector spaces:**

(i) Definitions, Ring, Division Ring, Integral domain, Fields, Sub-ring, Ideals, Homomorphism and Isomorphism.
(ii) Vector space, Subspace, Linear dependence, Independence, Basis, Dimension.
15. **Numerical Methods:**

1. **Statics and Dynamics**

   (a) **Statics** :

   Simple applications of equilibrium equations. Friction. Trusses.

   (b) **Dynamics** :

   Simple applications of equations of motion, work, energy and power.

   Conservation of momentum and impact.

2. **Theory of Machines** :

   Simple examples of kinematic chains and their inversions.

   Different types of gears, bearings, governors, flywheels and their functions.

   Static and dynamic balancing of rigid rotors.

   Simple vibration analysis of bars and shafts.

   Linear automatic control systems.

3. **Mechanics of Solids** :

   Stress, strain and Hookes Law. Shear and bending moments in beams. Simple bending and torsion of beams, springs and thin walled cylinders. Elementary concepts of elastic stability, mechanical properties and material testing.

4. **Manufacturing Science** :

DNC, Advanced Machining process : EDM, ECM, AJM, USM, EBM, LBM. Thermoplastics, Thermosets, coating technology (PVD, CVD.)

5. Manufacturing Management :

Operation Research, formulation of LP problem, solution by graphical method, simplex method. Transportation problem, Assignment problem, theory of games, waiting line, statistical quality control, production control, quality engineering concepts of Taguchi, Total quality management, ISO 9000/ISO 14000. Methods and time study, motion economy and work space design, operation and flow process charts, break-even analysis.

6. Thermodynamics :

7. Energy Conversion :

Flow of steam through nozzles, critical pressure ratio, shock formation and its effect. Steam Generators, mountings and accessories. Impulse and reaction turbines, elements and layout of thermal power plants.

Hydraulic turbines and pumps, specific speed, layout of hydraulic power plants.

Introduction to nuclear reactors and nuclear power plants, handling of nuclear waste.

8. Refrigeration and Air Conditioning :

Unit of refrigeration, Maximum COP, Bell Coleman, vapour absorption and vapour compression cycles, Refrigeration equipment, operation and maintenance, refrigerants, principles of air conditioning, psychometric chart, comfort zones, humidification and dehumidification. Ozone friendly refrigerants.

9. Fluid Mechanics :
Hydrostatics, continuity equation, Bernoulli’s theorem, flow through pipes, discharge measurement, laminar and turbulent flow, boundary layer concept.

**PHILOSOPHY**

Section-A

**Problems of Philosophy**

1. **Substance:** Aristotle, Descartes, Locke Berkeley’s immaterialism, Hume, Nyaya Vaisesika and Jaina.

2. **Universals:** Realism and Nominalism (Plato, Aristotle, Berkeley’s Criticism of Abstract ideas) Nyaya – Vaisesika, Buddhism.

3. **Method of knowledge:** Empiricism, Rationalism, Pramana Vada - Carvaka, Nyaya – Vaisesika.

4. **Theories of Truth:** Correspondence theory, Coherence theory, Pragmatic theory.

5. **Khyati Vada:** Anyatha khyati, Akhyati, Anirvacaniya khyati, Viparita khyati.

6. **Body and Mind:** Descartes (Interactionism), Spinoza (Parallelism), Leibnitz (Pre-established theory), Epiphenomenalism.

**Section-B**

**Logic**

6. Algebra of classes: Null class, Class inclusion, Class-membership, Reduction to normal forms.

Section-C

Ethics

1. Statement of fact and statement of value, Right and Good - Teleology and de-ontology.

2. Moral standards: Psychological Hedonism, Utilitarianism (Bentham and J.S. Mill), Rigorism (Kant).

3. Problem of freedom of will.

1. Mechanics, Properties of matter, Special Relativity and Waves

Michelson Morley experiment, Postulates of Relativity, Lorentz transformation, addition of velocities, length contraction, time dilation, mass-energy relation.

2. Geometrical and Physical Optics.

Lasers, characteristics of laser light: spatial and temporal coherence, focussing of laser beams and applications.

3. Heat and Thermodynamics

4. Electricity and Magnetism

5. Atomic and Nuclear Physics

6. Solid State Physics and Electronics
Crystal structure, Bravais Lattices, Miller indices, X-ray diffraction, Bragg’s Law.

Vacuum diodes in half-wave and full-wave rectification, qualitative ideas of semiconductors, p-type and n-type semiconductors, junction diode, Zener diode, transistors, binary numbers, Logic gates and truth tables, Basic parts of digital computers.

**POLITICAL SCIENCE & INTERNATIONAL RELATIONS**

**Section-A**

1. **Political Science**: Nature & scope and approaches to the study of Political Science

2. **Concepts**: State, Sovereignty, Power, Nationalism, Civil Society

4. **Democracy**: Meaning and Theories of Democracy.

5. **Political Ideologies**: Liberalism, Marxism, Socialism, Fascism, Gandhism.

6. **Party System and Political Process**: Theories of Party System, National and regional parties, Patterns of coalition politics, interest and pressure groups.

7. **Forms of Government**: Parliamentary and Presidential. Federal & unitary

8. Regionalism and Decentralization

9. **Theories of Development and Underdevelopment**: Role of Bureaucracy;

10. **Social Movements**: Peasant & workers, Tribal, Feminist Environmental Movements and Role of Non Government organisation.

11. **Major theories of International relations**: Idealist, Realist, Systems Decision making;
12. **State & the Global order**: Nature and Impact of globalization; Regional Economic Cooperation.

---

**Section-B**

**Government and Politics with Special reference to India**

1. Approaches to the study of Governments

2. **Constitutions and Basic features**: U.K., USA, and China.

3. **Constitutional Development** in British India; The Constituent Assembly and salient features of the Indian Constitution.

4. **Nature of Indian federalism**: Centre-state relations, legislative, administrative, financial and political

5. **Fundamental Rights and Directive Principles of State Policy, Fundamental Duties**;

6. **The Union Executive**: President, Prime Minister and the Council of Ministers

7. **Parliament**: Powers and functions of the Lok Sabha & Rajya Sabha; Parliamentary Committees;

8. **The Judiciary**: The Supreme Court, Judicial Review; Judicial Activism.

9. **The State Executive**: Governor, Chief Minister and the Council of Ministers;

10. **Indian Party System**: Evolution and Contemporary trends; coalition government at the Centre and States, pressure groups in Indian politics.

11. **Local Government & Politics**: Panchayti Raj and Municipal Government; Role of women in Panchayats.

12. **Challenges to Indian Political System**: 
a) Communalism, Regionalism, terrorism, casteism, criminalisation and corruption.

b) Regional disparities, socio economic inequality, Poverty, Illiteracy, Population, growth, impact of globalization.

**PSYCHOLOGY**

1. **Introduction to psychology** :

   Concept and definition of psychology. Branches of psychology. Application of psychology to society and social problems.

2. **Methods in Psychology** :

   Characteristics and Application of methods; Introspection, Clinical, case study, Experimental.

3. **Quantitive Analysis** :

4. **Physiological Psychology** :

5. **Development of human behaviour** :

6. **Perception** :

   Perceptual processes; Perceptual organisation, Perception of form, colour, depth and time; Perceptual readiness and constancy; Role of motivation, social and cultural factors in perception; Application of knowledge of perception to skill development (e.g. for certain jobs like that of driving, airline pilots etc.).
7. **Learning** :

8. **Memory** :

Physiological basis of memory, Remembering and forgetting, Measurement of Remembering (Recall, Recognition, Relearning). Short term and long term memory, Theories of forgetting (Decay and Interference theories and Repressive forgetting). Application of Mnemonic devices etc, to improving memory.

9. **Cognition and Language** :

Concept formation, Nature and development of thinking, Language and thought, acquisition of language, Problem solving, Creative thinking and its application.

10. **Intelligence and Aptitude** :

Definition and concepts, Theories and models of Intelligence, Measurement of intelligence and aptitude, Exceptional intelligence, multiple intelligence, emotional intelligence, artificial intelligence.

11. **Motivation and Emotion** :

Definition and concept of imprinting, needs, drives and motives; Theories of motivation and their application (drive reduction theory, Maslow’s motivational hierarchy). Social motivation: Achievement, power, affiliation motives and influence of early experiences. Physiological basis of emotion. Theories of emotion (James-Lange and Cannon-Brad theories, cognitive theories).

12. **Personality** :

Concepts and Definition of personality. Study of personality (Trait, type and eclectic approaches) Development of personality (Freud, Erikson, Biological and socio-cultural determinants). Measurement of Personality (Self-report measures, projective tests). Application of personality profiles in fitting a person to a job.

13. **Adjustment and Stress** :

14. Social Behaviour:

15. Application of Psychology:

1. **Basic concepts**: Meaning, Scope and Significance; Public and Private Administration; Evolution of the Discipline; Comparative Public Administration; Development Administration; New Public Administration; New Public Management Perspective.

2. **Principles of Organisation**: Hierarchy, Unity of Command, Span of Control, Authority and Responsibility, Coordination, Supervision, Centralisation and Decentralisation, Delegation.

4. **Administrative Behaviour**: Leadership, Policy Formulation, Decision Making, Communication, Motivation, Morale.

5. **Accountability and Control**: Concepts; Legislative, Executive and Judicial Control over Administration; Citizen and Administration; Civil Society, People's Participation, Right to Information.

6. **Comparative Administrative Systems**: USA, UK, France: Features, Recruitment, Training, Promotion.

7. **Personnel Administration in India**: Recruitment to all India and Central Services, Training, Promotion; Union Public Service Commission.

8. **Financial Administration**: Budget – Concept, Formulation, Execution; Accounts; Audit; Comptroller and Auditor General of India.

9. **Central and State Administration in India**: Features of Indian Constitution; President, Prime Minister and Council of Ministers, Central Secretariat, Cabinet Secretariat, Prime Minister’s Office, Planning Commission, Finance Commission, Election Commission; Governor, Chief Minister, State Secretariat, Directorate, District Administration.
**SOCIOLOGY**

**Unit I : Basic Concepts :**

Society, community, association, institution, culture, culture change, diffusion, Cultural log, ethnocentrism, acculturation.

Social Groups—primary, secondary and reference groups.

Little Tradition and Great tradition,

Status and role, role conflict, role set, social control.

Norms and values—conformity and deviance,

Law and customs.

Socio-cultural processes :

socialization, assimilation, integration, cooperation, competition, conflict, accommodation, universalization and parochialization.

**Unit II : Marriage, Family and Kinship :**

Marriage : types and forms, marriage as contract, and as a sacrament.

Family : types, functions and changes.

Kinships : terms and usages.

**Unit III : Social Stratification :**

Forms and functions; Caste, Class and gender, Jajmani system, purity and pollution, dominant caste, sanskritisation.

**Unit IV : Types of Society :**
Tribal, agrarian, industrial and post-industrial, society.

**Unit V : Economy and Society :**

Economic systems of simple and complex societies, non-economic determinants of economic behaviour, market (free) economy and controlled (planned) economy.

**Unit VI : Industrial and Urban Society :**

Rural-Urban Continuum and contrast, urban growth and urbanization, town, city and metropolis; urban slums; impact of automation on society; industrialisation and environment.

**Unit VII : Social Demography :**

Population size, growth, composition, and distribution in India; components of population growth—births, deaths and migration; population policy.

**Unit VIII : Political Processes :**

Power, authority and legitimacy; political socialisation; political modernisation, pressure groups; caste and politics, Religion and politics.

**Unit IX : Weaker Sections-and Minorities :**

Protective discrimination; Constitutional safeguards.

**Unit X : Social Change :**

Theories of change; factors of change; science, technology and change. Social movements—Peasant Movement, Women's Movement, Backward Caste Movement, Dalit Movement.
Group-A: Probability & Probability Distributions

Unit-I
Random experiment, sample space, event, algebra of events, probability on a discrete sample space, basic theorems of probability and simple examples based thereon, conditional probability, independent events, Bayes’ theorem and its applications, discrete and continuous random variables and their distributions, expectation, moments, moment generating function, joint distribution of two random variables, marginal and conditional distributions, independence of random variables, covariance. Chebyshev's inequality, weak law of large numbers and central limit theorem for independently and identically distributed random variables with finite variance and their simple applications.

Unit-II
Distribution function of random variables, Bernoulli, Binomial, Geometric, Negative binomial, Hypergeometric, Poisson, Uniform, Beta, Exponential, Gamma, Cauchy, Normal, Lognormal and Bivariate normal distributions, real-life situations where these distributions provide appropriate models. Derivation of mgf and characteristic function of the distributions, computation of their moments and Pearsonian co-efficients.

Group-B: Statistical Methods

Unit-I
Concept of a statistical population and sample, types of data, presentation and summarization of data, measures of central tendency, dispersion, moments, skewness and kurtosis, measures of association and contingency, correlation, rank correlation, intraclass correlation, correlation ratio, simple and multiple linear regression, multiple and partial correlations (involving three variables only)

Unit-II
Curve-fitting and principle of least squares, concepts of parameter and statistic, $Z$, $\chi^2$, $t$ and $F$-statistics and their distributions, properties and applications, distributions of sample range and median (for continuous distributions only).

**Group-C: Statistical Inference**

**Unit-I**

Properties of a good estimator: Unbiasedness, consistency, efficiency, sufficiency, completeness; minimum variance unbiased estimation, Rao-Blackwell theorem, Cramer-Rao inequality and minimum variance bound estimator, Methods of estimation: moments, maximum likelihood, least squares and minimum chi-square; properties of maximum likelihood estimator, idea of a random interval, confidence intervals for the parameters of standard distributions, shortest confidence intervals, large-sample confidence intervals.

**Unit-II**

Simple and composite hypotheses, two kinds of errors, level of significance, size and power of a test, desirable properties of a good test, most powerful test, Neyman-Pearson lemma and its application for testing simple hypothesis, uniformly most powerful test, likelihood ratio test and its properties and applications. Chi-square test, sign test, Wald-Wolfowitz run test, run test for randomness, median test, Wilcoxon test and Wilcoxon-Mann-Whitney U-test. Wald's sequential probability ratio test, OC and ASN functions, application to binomial and normal distributions.

**Group-D: Sampling Theory and Design of Experiments**

**Unit-I**

Complete enumeration vs sampling, need for sampling, basic concepts of sampling and sampling design, large-scale sample surveys, sampling and non-sampling errors, simple random sampling, estimation of sample size, stratified random sampling, systematic sampling, cluster sampling, ratio, product and regression methods of estimation under simple and stratified random sampling, double sampling for ratio and regression methods of estimation, two-stage sampling with equal size first-stage units.

**Unit-II**

Analysis of variance with equal number of observations per cell in one, two and three-way classifications, analysis of covariance in one and two-way classifications, basic principles of experimental designs, completely randomized design, randomized block
design, Latin square design, missing plot technique, $2^n$ factorial experiment, total and partial confounding, $3^2$ factorial experiments, split-plot design and balanced incomplete block design.

Each group should have equal weight

---

**ZOOLOGY**

I. (a) Taxonomy

Nomencature and classification of animals up to orders; Taxonomic principles- species, ranking and phylogenetic divisions.

(b). Non-chordata

Structure, reproduction and life history of the following:

Amoeba, Plasmodium, Hydra, Fasciola, Taenia, Pheretima, Palaemon, Periplaneta, Pila and Asterias.

II. Chordata

General features and phylogeny of protochordates; General characters and phylogeny of cyclostomes, pisces, amphibians, reptiles, aves and mammals; Type studies : Scoliodon, Rana, Calotes, Columba and Oryctolagus.

III. Comparative anatomy

Comparative functional anatomy of vertebrate systems : integument, digestive, brain, kidney, circulatory and endocrine.

IV. (a). Ecology and Wildlife

Concept and components of ecosystem (energy flow, food chain, food web, ecological pyramids, bio-geochemical cycles such as carbon, nitrogen and sulphur; Biotic community; Concept of population; Animal adaptations; Biodiversity- principles and types ($\alpha$, $\beta$ and $\gamma$diversity); Conservation; Wildlife of Orissa; Concept of wildlife management and endangered species.
(b). Evolution and Economic Zoology

Principles, theories and evidences of evolution; Palaeozoology; Zoological eras; Zoogeographical distribution of animals; Beneficial insects and their culture; Protozoan and helminth parasites of man; Poisonous and non-poisonous snakes.

V. (a) Cell Biology and Microbiology

Structure of animal cell; Cell organelles and their functions; Cell division - mitosis and meiosis; Prokaryotes and eukaryotes; Bacterial cell structure; Viruses and their types; Bacterial and viral diseases.

(b). Genetics

Concept of genes and heredity; Mendelian and non-Mendelian inheritance; Linkage and crossing-over; Mutation and recombination; Sex determination; Sex-linked inheritance.

(c). Immunology

Innate vs acquired immunity; Antigen and antibody; B and T cells; organ and tissue transplantation; Immune response and AIDS.

VI. (a). Biochemistry

Structure and organization of biomolecules - carbohydrates, lipids, proteins and nucleic acids; Glycolysis; TCA cycle; Glycogen metabolism; Gluconeogenesis; β-oxidation of fatty acids; Electron transport and oxidative phosphorylation; Hormones; Vitamins; Enzymes; Coenzymes; pH and buffers.

(b). Molecular Biology

Structural organization of DNA and RNA; Types of RNA; DNA replication; Transcription and translation; Genetic code; Protein synthesis.

VII. (a). Physiology and Endocrinology

Physiology of digestion, excretion and respiration; Muscles and their contraction; Neuron and nerve conduction; Hormone action; Second messenger concept; Physiology of reproduction; Hypothalamic regulation and endocrine functions.
(b). Ethology

Neural and hormonal control of behaviour; Mechanism of learning and memory; Biological rhythms.

(c) Embryology

Gametes and gametogenesis; Fertilization; Cleavage and gastrulation in frog and chick; Metamorphosis; Placenta and placentation in mammals.

VIII. (a). Biotechnology

Recombinant DNA; Restriction enzymes; Gene cloning and vectors; c-DNA; Gene library; Animal cloning and GM animals; Application of biotechnology in health care, waste management and food production.

(b). Instrumentation

Microscopy (compound, electron and phase-contrast); pH-metry; Colorimetry; Chromatography; Centrifugation; Electrophoresis; ELISA.

(c). Biostatistics

Measurement of central tendency- mean, mode and median; Tests of significance ($x^2$, t and F).
Syllabi for the
Orissa Civil Services
(Main) Examination
(Subject-wise)
The aim of the paper is to test the candidate’s ability to understand serious discursive prose and express his ideas clearly and correctly in Oriya language. The pattern of questions would broadly be as follows:

- Comprehension of a given passage .. 30 Marks
- Precis writing with a passage of around 1000 words .. 40 Marks
- Translation from English to Oriya .. 30 Marks
- Grammar, usage and vocabulary .. 80 Marks
- Short Essay of around 1000 words .. 100 Marks
- Expansion of an idea .. 20 Marks

Total .. 300 Marks
The aim of the paper is to test the candidate’s ability to understand serious discursive prose and express his ideas clearly and correctly in the English language. The pattern of questions would broadly be as follows:

- Comprehension of a given passage .. 30 Marks
- Precis writing with a passage of around 1000 words .. 40 Marks
- Translation from Oriya to English .. 30 Marks
- Grammar, usage and vocabulary .. 80 Marks
- Short Essay of around 1000 words .. 100 Marks
- Expansion of an idea .. 20 Marks

Total .. 300 Marks
Candidates will be required to write an Essay on a specific topic. The choice of subjects will be given. They will be expected to keep closely to the subject of the essay to arrange their ideas in orderly fashion and to write concisely. Credit will be given for effective and exact expression.
GENERAL STUDIES

The nature and standard of questions in this paper will be such that a well-educated person will be able to answer them without any specialized study. The questions will be such as to test a candidate’s general awareness of a variety of subjects, which will have relevance for a career in Civil Services.

Paper-I

(a) History of Modern India and Indian Culture-

1) The History of Modern India will cover the following:
   
   * History of India since 1857
   * Important personalities who shaped the Freedom Movements in Orissa and India
   * Social Reform Movements

2) Indian culture will cover the following:
   
   * Indian culture from ancient times to modern times
   * Temple architecture of Orissa.
   * Socio-cultural developments in Orissa

(b) Geography of India will cover the following-

   * Physical, economic and social geography of India.
   * Orissa’s Physiography and Drainage system
   * Orissa’s Natural Resources – Water, forest and minerals.

(c) Indian Polity will include the following-

   * Constitution of India
   * Political system of India
   * Government and politics in Orissa
   * Panchayati Raj Institutions (PRIs) in Orissa.
(d) **Current National issues and topics of social relevance**-

This part is intended to test the candidate’s awareness of current national issues and topics of social relevance in the present day India such as;

1. Demography & Human Resource Development

(e) **Legal and environmental issues** -

1. Human Rights
2. Corruption in public life
3. Communal harmony
4. Protection of minorities
5. Internal security and related issues
6. Environment and ecological issues; ecological preservation, conservation of natural resources and national heritage.
7. Role of national institutions, their relevance and need for change
Paper-II

(a) India and the World:

This part is intended to test candidate’s awareness of India’s relationship with the world in various spheres, such as the following:

1. Foreign Affairs
2. External security and related matters
3. Nuclear policy
4. Indians abroad

(b) Indian Economy:

1. This part will include the following:
   
   I. Planning, economic development, economic reforms and development of the Corporate Sector in India
   
   II. Economic and Trade issues
   
   III. Foreign trade
   
   IV. Role and functions of IMF, World Bank and WTO
   
   V. Reserve Bank of India – its role and functions

2. I. Orissan Economy: Development during the post Reform Period.
   
   II. Regional disparity

(c) International Affairs & Institutions:

This part will include the following:

1. Important events in world affairs
2. International institutions like UN, ILO, EU, SAARC, WHO, ICJ
(d) Developments in the field of science & technology, communications and space:

In this part questions will test the candidate’s awareness of the developments in the field of science and technology, communications and space and also on basic ideas of computer;

(e) Statistical Analysis, Graphs & Diagrams:

This part will include exercises to test the candidates ability to draw common sense conclusions from information presented in graphical, statistical or diagrammatical form and to point out deficiencies, limitations or inconsistencies therein. The candidates should also be aware of techniques of counting and elementary probability.
OPTIONAL SUBJECTS FOR MAIN EXAMINATION

Total number of questions in the question papers of optional subjects will be eight. All questions will carry equal marks. Each paper will be divided into two parts, viz. Part A and Part B, each part containing four questions. Out of eight questions, five questions are to be attempted. One question in each part will be compulsory. Candidates will be required to answer three more questions out of the remaining six questions, taking at least one question from each part. In this way, at least two questions will be attempted from each part i.e. one compulsory question plus one more.
Cropping pattern in different agro-climatic zones of the country. Crop diversification. Impact of high-yielding and short-duration varieties on shifts in cropping pattern. Concepts of multiple cropping, multistorey, relay and inter-cropping, and their importance in relation to food production. Package of practices of cereals, pulses, oil seeds, fibres, sugar, tuber and fodder crops grown during Kharif and Rabi seasons in different regions of the country. Organic farming – principles and practices.

Weeds, their characteristics, dissemination and association with various crops; their multiplication; cultural, biological and chemical control of weeds.

Important features, scope and propagation of various types of forestry plantations such as extension, social forestry, agro-forestry, and natural forests.

Soil conservation planning on watershed basis. Erosion and run-off management in hilly, foot hills, and valley lands; processes and factors affecting them. Dryland agriculture and its problems. Technology for stabilising agricultural production in rainfed areas.
Section - B

Farm management, scope, importance and characteristics, farm planning and budgeting. Economics of different types of farming systems and factors affecting it. Marketing and pricing of agricultural inputs and outputs, price fluctuation and their cost; role of co-operatives in agricultural economy. Agriculture export zone. World Trade Organisation, General Agreement on Trade and Tariff, Intellectual Property Rights in relation to agriculture.

Agricultural extension, its importance and role, methods of evaluation of extension programmes, socio-economic survey and status of big, small, and marginal farmers and landless agricultural labourers; farm mechanization and its role in agricultural production and rural employment. Training programmes for extension workers. Institution village linkage programme.

PAPER - II

Section - A

Seed technology, its importance. Different kinds of seeds. Seed production and processing techniques. Role of public and private sectors in seed production, processing and marketing in India.

Plant physiology and its significance in agriculture. Imbibition, surface tension, diffusion and osmosis. Absorption and translocation of water, transpiration and water economy. Enzymes and plant pigments; photosynthesis-modern concepts and factors affecting the process, aerobic and anaerobic respiration; C$_3$, C$_4$ and CAM mechanisms. Carbohydrate, protein and fat metabolism. Growth and development; photoperiodism and vernalization. Auxins, hormones, and other plant regulators and their mode of action and importance in agriculture. Physiology of seed development and germination; dormancy.

Section - B

Climatic requirement and cultivation of major fruits, vegetable crops and flower and ornamental plants. Dryland and High-tech horticulture. Handling and marketing problems of fruit and vegetables. Methods of preservation of important fruits and vegetable products, processing techniques and equipment. Role of fruits and vegetables in human nutrition. Landscaping – design and layout of lawns and gardens.

Food production and consumption trends in India. National and international food policies. Production, procurement, distribution and processing constraints. Relation of food production to national dietary pattern. Protein – calorie malnutrition.
AGRICULTURAL ENGINEERING

Paper-I

Section - A

1. Surveying:

Chain survey, compass survey, plain table survey, computation of area, levelling, contour survey, land levelling, design, methods, earth work computation, land grading, land shaping, layout of fields, irrigation and drainage systems planning.

2. Fluid mechanics and irrigation:

Hydraulics of flow, open channel flow, steady and unsteady, uniform and non uniform, laminar and turbulent, Reynold’s number, Froude number, critical depth, hydraulic jump, Chezy’s and Manning’s formula. Soil-water-plant relationship, soil moisture types and its measurement, movement of water in soil, evaporation, transpiration, evapotranspiration, water requirement of crops, filed capacity, wilting point, available soil moisture, consumptive use-methods of estimation, irrigation efficiencies, irrigation scheduling, irrigation methods-gravity and pressure irrigation systems and their adoptability, micro irrigation system, measurements of irrigation water, irrigation planning and farm water management, earthen channel, lined channel, lining materials, culverts, inverted siphons, under ground pipe irrigation management, participatory irrigation management, irrigation pumps types and suitability, selection of pumps installation of pumps, care and maintenance of pumps.

3. Drainage:

Water logging problems in crops, drainage co-efficient, role of drainage in cropped area, drainage investigation and selection, open drains on farm, field surface drainage, sub-surface drainage systems, pipe drainage interceptor drain, mole drain, tube-well drainage, bio drainage, saturated hydraulic conductivity, salinity control and drainage water-utilization.
Section - B

4. **Groundwater & surface hydrology; wells and pumps:**

   Hydrologic cycle measurement of rainfall, evaporation, infiltration, estimation of runoff, factors affecting runoff, computation of volume of runoff and peak flow, unit hydrograph. Occurrence of ground water and its; movement, aquifer types, well screens, gravel packing, radius of influence, transmissibility, basin-wide ground water development, ground water recharge, artificial recharge, ground water investigation, well hydraulics, types of shallow and deep tube wells, their method of construction, design of tube wells and open wells, multiple well systems, boring and deepening of open wells, sealing of brackish and saline aquifer horizons, well development, draw down-yield relationship.

5. **Soil conservations and Watershed Management:**

   Soil erosion, types, factors affecting different kinds of erosion, methods to control soil erosion-biological control measures, contour farming, strip cropping, mixed cropping, inter cropping, mulching, mechanical control measures-their suitability for different conditions-design of contour ditches, contour bunds, graded bunds, bench terraces, contour stone wall-gully control structures-vegetative control method-brush dams, loose rock dam, drop spillway, chute spillway and drop inlet spillway, universal soil loss equation, vegetated waterways-its design.

   Watershed concept, land capacity classification, objectives of watershed management-selection of priority areas, management of natural resources, water harvesting, farm pond, percolation pond, runoff, farming systems, catchment area treatments, watershed-based soil and water conservation, integrated watershed development, role of remote sensing and GIS in watershed planning, development and evaluation.

6. **Farm structures:**

   Building Materials, bearing capacity of soil, factor of safety, types of masonry foundations, basement and superstructure, types of roofs, building plan and estimation, planning of farmstead and farm residence, farm fencing, farm gates, farm roads, dairy farm, poultry house and equipments, silo, feed storage structure, grain storage structure, storage structure for semi-perishables, threshing floor, drying floors, storage structure for fertilizer and seeds.
PAPER - II

Section – A

1.  Farm Power and Machinery.

Agricultural mechanization and its scope. Sources of farm power. History of tractor development. Thermodynamic-cycles, Thermal efficiency, Classification, construction and working principles of internal combustion (IC) engines, fuels, ignition, lubrication, cooling, governing system of I.C. engines, Different types of tractors and Power tillers, their manufacturers in India & their specifications, power transmission, ground drive, power take off (PTO), differential and control systems. Operation and maintenance of farm machinery, farm tractor and engines. Traction theory, mechanics of farm tractor chassis, weight transfer, human factors in tractor design. Different methods of locating C.G. of tractor. Primary and secondary tillage equipments. Sowing planting, inter culture, spraying, dusting, harvesting and threshing equipments. Mowers and combines. Earthmoving and land development machinery like scrapers, draglines, bulldozers and power buckets. Dynamometers their types and principles of prony brake dynamometer used for power measurement, cost estimation for hiring of tractors. Ergonomics of man-machine-system. Haulage of agricultural and forest produce, land clearing.

2.  Energy.

Energy requirements in agricultural, different renewable energy sources, energy from the sun and wind, biomass gasification, producer gas and bio-gas for running I.C. engines and for electric power generation. Energy efficient cooking stoves and alternate cooking fuels, use of electricity for agriculture and agro industrial application.

Section – B

3.  Agricultural Process Engineering:

Post Harvest Technology of crops and its scope, unit operations in processing of cereals, oil seeds and pulses. Working principles of equipments for milling, mixing, cleaning, grading, drying and storage of cereals, pulses and oil seeds, moisture content determination, physical properties, psychometry, energy and material balance, solvent extraction, process flowchart, properties of fruits and vegetables, food texture and theology, process parameters and equipment for sorting, washing, handling, peeling, slicing, blanching, mixing and handling, chilling, packaging, transportation, storage and preservation technology, properties of dairy and food products. Process flow chart for product manufacturing. Working principles of equipments for receiving, pasteurization, sterilization, homogenization, filling and packaging, butter manufacturing,

4. **Electronics and Instrumentation**:

   1.2. Minerals in animal diet: Sources, functions, requirements and their relationship of the basic mineral nutrients including trace elements.

   1.3. Vitamins, Hormones and Growth Stimulating, substances: Sources, functions, requirements and inter-relationship with minerals.

   1.5 Advances in Non-Ruminant Nutrition - Poultry: Nutrients and their metabolism with reference to poultry for meat and egg production. Nutrient requirements and feed formulation for layers and broilers at different ages.

2. **Animal Physiology**

2.3 Environmental Physiology: Physiological relations and their regulation; mechanisms of adaptation, environmental factors and regulatory mechanism involved in animal behaviour. Methods of controlling climatic stress.

SECTION-B

3. Livestock Production and Management:

3.1 Commercial Dairy Farming - Comparison of dairy farming in India with advanced countries. Dairying under mixed farming and as a specialised farming, economic dairy farming. Starting of a dairy farm. Capital and land requirement, organisation of the dairy farm. Procurement of inputs. Opportunities in dairy farming, factors determining the efficiency of dairy animal. Herd recording, budgeting, cost of milk production; pricing policy; personnel Management. Developing Practical and Economic ration for dairy cattle; supply of greens throughout the year, feeds and fodder requirements of Dairy Farm. Feeding regimes for dry and young stock and bulls, heifers and milch animals, new trends in feeding young and adult stock; Feeding records. Age estimation through dentition.

3.3. Feeding and management of animals under draught, flood and other natural calamities.

4. Genetics and Animal Breeding: Mendelian inheritance; deviations to Mendelian laws. Expression of genes; Linkage and crossing over; Sex determination, sex influenced and sex limited characters; Blood groups and polymorphism; Chromosome aberrations;
Gene and its structure; DNA as a genetic material; Genetic code and protein synthesis; Recombinant DNA technology, Mutations and types of mutations, methods for detecting mutations and rate of mutation.

4.1 Population Genetics applied to Animal Breeding: Quantitative and qualitative traits, Hardy Weinberg Law; Population Vs. individual; Gene and genotype frequency, Forces changing gene frequency; Random drift and small populations; Theory of path coefficient; Inbreeding; methods of estimating inbreeding coefficient, systems of inbreeding; Effective population size, Breeding value, estimation of breeding value, dominance and epistatic interactions, partitioning of variation; Genotype and environment correlation, genotype x environment interaction; Role of multiple measurements, Resemblance between relatives.

4.2 Breeding Systems: Heritability, repeatability, genetic and phenotypic correlations, their methods of estimation and precision of estimates; Aids to selection and their relative merits; Individual, pedigree, family and within family selection; Progeny testing; methods of selection; construction of selection indices and their uses; comparative evaluation of genetic gains through various selection methods; Indirect selection and correlated response; Inbreeding, upgrading, cross-breeding and synthesis of breeds; Crossing of inbred lines for commercial production; Selection for general and specific combining ability; open nucleus breeding system, synthetic population.

Paper-II

SECTION - A

1. Health and Hygiene

1.3 Bovine Anatomy-Regional Anatomy: Paranasal sinuses of ox-surface anatomy of salivary glands. Regional anatomy of intraorbital, maxillary, mandibuloalveolar, mental and coronal nerve block-Regional anatomy of paravertebral nerves, pudental nerve,
median, ulnar and radial nerves-tibial, fibular and digital nerves-Cranial nerves-structures involved in epidural anaesthesia-superficial lymph nodes-surface anatomy of visceral organs of thoracic, abdominal and pelvic cavities-comparative features of locomotor apparatus and their application in the biomechanics of mammalian body.

1.4 Anatomy of Fowls: Musculo-skeletal system-functional anatomy in relation to respiration and flying, digestion and egg production.

1.5 Physiology of blood and its circulation, respiration, excretion, Endocrine glands in health and disease.

1.5.2 Circulation: Physiology of heart, cardiac cycle, heart sounds, heart beat, electrocardiograms, Work and efficiency of heart, effect of ions on heart function, functions of cardiac muscle, nervous and chemical regulation of heart, effect of temperature and stress on heart, blood pressure and hypertension, Osmotic regulation, arterial pulse, vasomotor regulation of circulation, shock. Coronary and pulmonary circulation, Blood-Brain barrier.

1.5.3 Respiration: Mechanism of respiration, Transport and exchange of gases, neural control of respiration, chemoreceptors, hypoxia, respiration in birds.

1.5.5 Endocrine glands: Functional disorders, their symptoms and diagnosis. Synthesis of hormones, mechanism and control of secretion, hormonal receptors, classification and function.

1.7. Veterinary Hygiene with reference to water, air and habitation: Assessment of pollution of water, air and soil. Importance of climate in animal health. Effect of
environment on animal function and performance. Relationship between industrialisation and animal agriculture. Animal housing requirements for specific categories of domestic animals, viz., pregnant cows, milking cows, broiler birds, and sows-stress, strain & productivity in relation to animal habitation.

2. Veterinary Public Health

2.1 Zoonoses: Classification, definition; role of animals and birds in prevalence and transmission of zoonotic diseases-occupational zoonotic diseases.

2.2. Epidemiology: Principles, definition of epidemiological terms, application of epidemiological measures in the study of diseases and disease control, Epidemiological features of air, water and food borne infections.

SECTION - B

4. Animal Diseases:

4.1 Pathogenesis, symptoms, postmortem lesions, diagnosis and control of infectious diseases of cattle, pigs, poultry, horses, sheep and goats.

4.2 Etiology, symptoms, diagnosis, treatment of production diseases of cattle, pig and poultry.

4.3 Deficiency diseases of domestic animals and birds.

4.4 Diagnosis and treatment of nonspecific condition like Impaction, Bloat, Diarrhoea, Indigestion, dehydration, stroke, poisoning.

4.5 Diagnosis and treatment of neurological disorders.
4.6 Principles and methods of immunisation of animals against specific diseases-herd immunity-disease free zones-'zero' disease concept-chemoprophylaxis.

4.7 Anaesthesia-local, regional and general-pre-anaesthetic medication, Symptoms and surgical interference in fractures and dislocation, Hernia, choke, abomasal displacement-Caesarian operations, Rumenotony, Castrations. Surgical manipulations of luxation of patella and urinary obstructions.

5. Milk and Milk Products Technology : 

5.1 Milk Technology : Organization of rural milk procurement, collection and transport of raw milk. Quality, testing and grading raw milk, Quality storage, Grades of whole milk, Skimmed milk and cream.

5.2 Milk Products Technology : Selection of raw materials, assembling, production, processing, storing, distributing and marketing of milk products such as Butter, Ghee, Khoa, Chenna, Cheese; Condensed, evaporated, dried milk and baby food; Ice cream and Kulfi; by products; whey products, butter milk, lactose and casein. Testing, Grading, Judging of milk products-BIS and Agmark specifications, legal standards, quality control and nutritive properties. Packaging, processing and operational costs.

6. Meat Hygiene and Technology :

6.1 Meat Hygiene :

6.1.1 Ante-mortem care and management of food animals, stunning, slaughter and dressing operations; abattoir requirements and designs; Meat inspection procedures and judgement of carcass meat cuts-grading of carcass meat cuts-duties and functions of Veterinarians in wholesome meat production.

6.1.2 Hygienic methods of handling meat-spoilage of meat and control measures-Post slaughter physicochemical changes in meat and factors that influence them-Quality
improvement methods-Adulteration of meat and detection-Regulatory provisions in Meat trade and Industry.

6.2. **Meat Technology**

6.2.1 Physical and chemical characteristics of meat-meat emulsions-methods of preservation of meat-curing, canning, irradiation, packaging of meat and meat products; Meat products and their formulations.

6.3. **By-products**: Slaughter house by-products and their utilisation-Edible and inedible by-products-social and economic implications of proper utilisation of slaughter house by-products-Organ products for food and pharmaceuticals.

ANTHROPOLOGY

Paper –I

Physical/Biological Anthropology & Human Genetics:

Unit –I:

1.1 Meaning and Scope of Anthropology

1.2 Relationship with other disciplines: History, Sociology, Geology, Economics, Political Science, Psychology, Life Science, and Medical Science.

1.3 Main Branches of Anthropology, their scope and relevance:

   a) Social/Cultural Anthropology
   b) Physical/Biological Anthropology
   c) Archaeological Anthropology

1.4 Living Primates:

   Order Primate and Classification of Primates, Comparative morphology, anatomy and phylogeny of man and apes.

   Primate Locomotion: Terrestrial and Arboreal adaptation. Skeletal changes due to assumption of erect posture.

1.5 Fossil Evidences of Human Evolution (Phylogenetic status, characteristics and distribution):

   a) Pre-pleistocene fossil primates (Oreopithecus)
   b) South and East African Hominids: Plesianthropus/Australopithecus Africanus, Paranthropus, Australopithecus
   c) Paranthropus – Homo erectus, Homo Erectus Javanicus, Homo Erectus Pekinensis
   d) Homo Heidelbergensis
   e) Neanderthal Man – La-Chapelle Aux Saints (classical type), Mt. Carmelites types (Progressive type)
   f) Rhodesian Man
   g) Home Sapiens – Cro-Magnon, Grimaldi, Chanceleade.
1.6 Organic Evolution:

1.7 Human Race:

Concept of Race and racism. Biological perspective of race. Different factors responsible for race formation and racial criteria. Role of heredity and environment in determining racial traits. Major races of the world, their distribution and characteristics. Race crossing in man.

Unit –II:

2.3 Consanguineous and non-consanguineous marriage. Effect of consanguineous marriages.

2.4 Mendelian Genetics in Man: Autosomal inheritance, Sex linked and Sex limited inheritance. Inheritance of abnormal traits like hemophilia, thalassemia and colour blindness, Sickle Cell anemia, Albinism, Achondroplasia, Hairy pinna, Baldness and Cleft Palate.

2.5 Lethal and Sub Lethal Sub Lethal Genes: Multifactorial and Polygenic inheritance in Man. Sex Chromosomal aberrations: Klinefelter, Turner, Super female and Inter sex.

2.7 Population variation in genetic markers: ABO, Rh Blood Groups.

Unit –III:

Concept of Human Growth and development. Stages of Growth – prenatal, natal, infant, childhood, adolescent and maturity.

Factors affecting growth and development – Genetic, Environmental, Hormonal, Nutritional, Cultural and Socio-economic.

Unit – IV:

Concept of Reproductive Biology, demography and population study. Reproductive physiology of male and female. Biological aspects of human fertility. Relevance of menarche, menopause and other bioevents to fertility. Fertility patterns and differentials.

Demographic Theories – biological, social and cultural. Demographic methods – census, registration system, sample survey methods.

Population structures and population dynamics. Demographic rates and ratios, life table – structure and utility.

Unit – V:

Unit – VI:

Cultural Evolution – broad outlines of pre-historic cultures in Europe and India:

a) Paleolithic
b) Mesolithic
c) Neolithic
d) Chalcolithic
e) Copper-Bronze Age
f) Iron Age.

Unit – VII:

Family: Definition and types of family, household. Impact of urbanization, industrialization, education and feminist movements. Universality of family – a critique.

Primitive Economy: Economic Anthropology: Modes of subsistence; hunting gathering, fishing, pastoralism, horticulture. Exchange: gifts, barter, trade, ceremonial exchange and market economy.

Types of political organizations – band, tribe, chiefdom, state, concept of power, authority and legitimacy, social control, law and justice in tribal societies.

Social structure and social organization, Role Analysis and social network. Institutions and groups. Social stratification, principles and forms: status and class, social mobility.
Unit – VIII:
Culture: definition and nature, paradoxes of culture.

Approaches to the study of culture and society – classical evolutionism, neo-evolutionism, cultural ecology, historical particularism and diffusionism, structural-functionalism, culture and personality, transactionalism, symbolism, cognitive approach and new ethnography, post structuralism and post-modernism.

Unit – IX:

Unit – X:
Basic techniques of data collection. Interview & observation, participant and non participant, schedules, questionnaire, case study methods, extended case study methods, life histories, genealogical method, Participatory Rapid Rural Appraisal(PRA), focused Group Discussion (FGD). Analysis, Interpretation and Presentation of data.

Unit – XI:
Relevance in understanding of contemporary society. Dynamics of ethnicity at rural, tribal, urban and international levels. Ethnic conflicts and political developments. Concept of ethnic boundaries. Ethnicity and concept of nation state.

Unit – XII:
Paper –II

Indian Society and Culture:

Unit-I:

Forest Policy and tribals. Impact of urbanization and Industrialisation on tribal and rural populations.

Unit –II:

Demographic Profile of India – ethnic and linguistic elements in the Indian Population and their distribution.

Unit –III:

Unit – IV:

Emergence, Growth and Development of Anthropology in India – contributions of the 19th century and early 20th Century scholars and administrators. Contributions of Indian Anthropologists to tribal and caste studies.

Unit –V:

Salient characteristic features of Indian Society. Approaches to the study of Indian Society and Culture. Village studies in India, Changing village India. Linguistics and religious minorities – social, political and economic status.
Unit –VI:

Problems of exploitation and deprivation of Scheduled Castes/Scheduled Tribes and Other Backward Classes. Protective legislations for Scheduled Tribes and Scheduled Castes. Social change and contemporary tribal societies: Impact of modern democratic institutions, PESA Act, Impact of development programmes and welfare measures on tribals and weaker sections. Emergence of ethnicity, tribal movements and quest for identity.

Unit –VII:

Social change and Development among the tribes during colonial and post-Independent India.

Unit –VIII:

History of administration of tribal areas, tribal policies, plans, programmes of tribal development and their implementation. Role of NGOs. Role of Anthropology in tribal and rural development. Contributions of Anthropology to the Understanding of regionalism, communalism, ethnic and political movements.
1. **Microbiology and Plant Pathology**: Structure and reproduction of viruses and bacteria; Plasmids and their significance; Gene transfer in bacteria (Transformation, Transduction, Conjugation); Applications of microbes in agriculture, industry, medicine and pollution control; General account of infection, Phytoimmunology. Important plant diseases caused by viruses, bacteria, mycoplasma and fungi, Mode of infection and dissemination. Molecular basis of infection and disease resistance/defence; Physiology of parasitism; Fungal toxins.

2. **Cryptogams and Gymnosperms**: Study of structure and reproduction of Algae, Fungi, Bryophytes, Pteridophytes and Gymnosperms from evolutionary viewpoint, their distribution in India and their economic potential.

3. **Angiosperms**: Comparative account of various systems of Angiosperm Classification; Study of angiospermic families – Magnoliaceae, Ranunculaceae, Brassicaceae (Cruciferae), Rosaceae, Leguminosae, Euphorbiaceae, Malvaceae, Dipterocarpaceae, Apiaceae (Umbelliferae), Asclepiadaceae, Verbenaceae, Solana-ceae, Rubiaceae, Cucurbitaceae, Asteraceae (Composite), Poaceae (Gramineae), Arecaceae (Palmae), Liliaceae, Musaceae, Orchidaceae.

**Section-B**

4. **Anatomy, Embryology and Biostatistics**: Anatomy – Structure and function of primary and secondary tissues, Mechanical tissue system, Conducting tissue system, Vascular tissue system, Stomata and their types; Anomalous secondary growth; Anatomy of C$_3$ and C$_4$ plants.

   Embryology - Development of male and female gametophytes; Pollination; Fertilization; Endosperm and its function; Embryo and patterns of embryo development; Polymbryony and apomixes; Applications of palynology.

   Biostatistic-Central tendency, Dispersion, Estimation and hypothesis testing, Significance of standard error, Probability distributions (normal, binomial, poisson), t-test, F-test, Chi-square test, Correlation and regression.

5. **Plant Utility and Exploitation**: Origin of cultivated plants, Vavilov's centres of origin. Plants as sources for food, fodder, fibres, spices, beverages, drugs, narcotics, insecticides,
timber, gums, resins and dyes, latex, cellulose starch and their products; Perfumery; Importance of Ethnobotany in Indian context; Energy plantation; Botanical Gardens and Herbaria.

6. Plant Tissue Culture: Totipotency, requirements for plant tissue culture, cell, tissue, organ culture, polarity, symmetry and differentiation, Cell, tissue and organ culture; Protoplast isolation and culture; Somatic hybrids and Cybrids.

PAPER-II

Section-A

1. Cell Biology: Techniques of Cell Biology, Prokaryotic and eukaryotic cells - Structural and ultrastructural details, Structure and function of extracellular matrix or ECM (cell wall) and membranes-cell adhesion, Membrane transport and vesicular transport; Structure and function of cell organelles (chloroplasts, mitochondria, ER, ribosomes, endosomes, lysosomes, peroxisomes, hydrogenosome), Nucleus, Nucleolus, Nuclear pore complex. Chromatin and Nucleosome; Cell signalling and cell receptors; Signal transduction (G-1 proteins, etc.); Mitosis and Meiosis; Molecular basis of cell cycle; Numerical and structural variations in chromosomes and their significance; Study of polytene, lambrush and B-chromosomes–structure, behaviour and significance.

2. Genetics, Molecular Biology and Evolution: Development of genetics; Gene versus allele concepts (Pseudoalleles), Quantitative genetics and multiple factors, Linkage and crossing over–methods of gene mapping including molecular maps (idea of mapping function), Sex chromosomes and sex-linked inheritance, Sex determination and Molecular basis of sex differentiation. Mutation (biochemical and molecular basis), Cytoplasmic inheritance and cytoplasmic genes (including genetics of male sterility), Prions and prion hypothesis; Structure and synthesis of nucleic acids and proteins; Genetic code and regulation of gene expression. Multigene families, Organic evolution-evidences, mechanism and theories; Role of RNA in origin and evolution.

3. Plant Breeding and Plant Biotechnology: Methods of plant breeding - introduction, selection and hybridization (pedigree, backcross, mass selection, bulk method), Male sterility and heterosis breeding, Use of apomixis in plant breeding; Use of molecular markers in plant breeding.

Section-B
4. **Plant Physiology and Biochemistry**: Water relations, Mineral nutrition and ion transport, mineral deficiencies. Photosynthesis–photochemical reactions, photophosphorylation and carbon pathways C₃, C₄ and CAM pathways; Photorespiration; Respiraion-anaerobic and aerobic, including fermentation; Electron transport chain and oxidative phosphorylation; Chemiosmotic theory and ATP synthesis; Nitrogen fixation and nitrogen metabolism; Enzymes, coenzymes, energy transfer and energy conservation; Importance of secondary metabolites.

5. **Growth, Development and Stress Physiology**: Photomorphogenesis, Pigments as photoreceptors (plastidal pigments and phytochrome); Photoperiodism and flowering, vernalization, senescence; Growth substances-their chemical nature, role and applications in agri-horticulture; Kinetic of growth, growth movements; Dormancy, storage and germination of seed; Fruit ripening - its molecular basis and manipulation; Fruit and seed physiology; Stress physiology (heat, water, salinity, metal).

6. **Plant Ecology and Plant Geography**: Ecological factors; Concepts and dynamics of community; Plant succession; Concepts of biosphere; Ecosystems and their conservation; Pollution and its control (including phytoremediation).

Forest types of India -- afforestation, deforestation and social forestry; Endangered plants, endemism and Red Data Books; Biodiversity; Convention of Biological Diversity, Sovereign Rights and Intellectual Property Rights; Biogeochemical cycles; Global warming; Forests of Orissa.
CHEMISTRY

PAPER-I

1. Atomic structure

Quantum theory, Heisenberg’s uncertainty principle, Schrodinger wave equation (time-independent). Interpretation of wave function, particle in one-dimensional box, quantum numbers, hydrogen atom, wave functions. Shapes of s, p, d and f orbitals.

2. Chemical bonding

Ionic bond, characteristics of ionic compounds, factors affecting stability of ionic compounds, lattice energy, Born-Haber cycle; covalent bond and its general characteristics, polarities of bonds in molecules and their dipole moments. Valence Bond Theory (VBT), concept of resonance and resonance energy. Molecular Orbital Theory (MOT); bonding in homonuclear diatomic molecules: H₂ Û H₂ to Ne₂ , MOT treatment of NO, CO, HF, CN, CNÜ , BeH₂ and CO₂ . Comparison of VBT and MOT, bond order, bond strength, bond length, dipole moment.

3. Solid State

4. The gaseous state

Equation of state for real gases, intermolecular interactions, liquefaction of gases and critical phenomena, Maxwell’s distribution of speeds, intermolecular collisions, collisions on the wall and effusion.

5. Thermodynamics and statistical thermodynamics
First law of thermodynamics, and heat absorbed in different types of processes; calorimetry, energy and enthalpy changes in various processes and their temperature dependence.

Second law of thermodynamics; entropy as a state function, entropy changes in various processes, entropy–reversibility and irreversibility. Nernst heat theorem and third law of thermodynamics.

Micro and macro states; canonical ensemble and canonical partition function; electronic, rotational and vibrational partition functions and thermodynamic quantities; chemical equilibrium in ideal gas reactions.

6. Phase equilibria and solutions

Phase equilibria in pure substances; phase diagram for a pure substance; phase equilibria in binary systems, partially miscible liquids–upper and lower critical solution temperatures; partial molar quantities, their significance and determination; excess thermodynamic functions and their determination.

7. Electrochemistry

Debye–Huckel theory of strong electrolytes and Debye–Huckel limiting Law for various equilibrium and transport properties.

Galvanic cells, concentration cells; electrochemical series, measurement of e.m.f. of cells and its applications fuel cells and batteries.

Processes at electrodes; double layer at the interface; rate of charge transfer, current density; overpotential; electroanalytical techniques–voltameter, polarography, amperometry, cyclic-voltametry, ion-selective electrodes and their use.

8. Chemical kinetics

Concentration dependence of rate of reaction; differential and integral rate equations for zeroth, first, second and fractional order reactions. Rate equations involving reverse, parallel, consecutive and chain reactions; effect of temperature and pressure on rate constant. Study of fast reactions by stop-flow and relaxation methods. Collisions and transition state theories.

9. Photochemistry
Absorption of light; decay of excited state by different routes; photochemical reactions between hydrogen and halogens and their quantum yields.

10. Surface phenomena and catalysis

Absorption from gases and solutions on solid adsorbents, adsorption isotherms—Langmuir, Gibbs and Freundlich isotherms; determination of surface area, characteristics and mechanism of reaction on heterogeneous catalysts.

11. Bio-inorganic chemistry

Metal ions in biological systems and their role in ion-transport across the membranes (molecular mechanism), ionophores, photosynthesis—PSI, PSII; nitrogen fixation, oxygen-uptake proteins, cytochromes and ferredoxins.

12. Coordination chemistry

(a) Electronic configurations; introduction to theories of bonding in transition metal complexes. Valence bond theory, crystal field theory and its modifications; applications of theories in the explanation of magnetism and electronic spectra of metal complexes.

(b) Isomerism in coordination compounds. IUPAC nomenclature of coordination compounds; stereochemistry of complexes with 4 and 6 coordination numbers; chelate effect and polynuclear complexes; trans-effect and its theories; kinetics of substitution reactions in square-planar complexes; thermodynamic and kinetic stability of complexes.

(c) Synthesis and structures of metal carbonyls; carboxylate anions, carbonyl hydrides and metal nitrosyl compounds.

(d) Complexes with aromatic systems, synthesis, structure and bonding in metal-olefin complexes, alkyne complexes and cyclopentadienyl complexes; coordinative unsaturation, oxidative addition reactions, insertion reactions, fluxional molecules and their characterization. Compounds with metal-metal bonds and metal atom clusters.

13. General chemistry of ‘f’ block elements

Lanthanides and actinides; separation, oxidation states, magnetic and spectral properties; lanthanide contraction.

14. Non-Aqueous Solvents
Reactions in liquid NH₃, HF, SO₂ and H₂SO₄. Failure of solvent system concept, coordination model of non-aqueous solvents. Some highly acidic media, fluorosulphuric acid and super acids.

**Paper-II**

1. **Delocalised covalent bonding**: Aromaticity, anti-aromaticity; Homo-aromaticity, non-aromaticity, annulenes, azulenes, tropolones, kekulene, fulvenes, sydnones.

2(a) **Reaction mechanisms**: General methods (both kinetic and non-kinetic) of study of mechanism of organic reactions illustrated by examples—use of isotopes, cross-over experiment, intermediate trapping, stereochemistry; energy diagrams of simple organic reactions, transition states and intermediates; energy of activation; thermodynamic control and kinetic control of reactions.

(b) **Reactive intermediates**: Generation, geometry, stability and reactions of Carbocations, carbanions, free radicals, carbenes, benzynes, nitrenes and enamines.

(c) **Substitution reactions**: SN1, SN2, SNi, SN’1, SN’2, SNi’ and SRN1 mechanisms; neighbouring group participation; electrophilic and nucleophilic reactions of aromatic compound including simple heterocyclic compounds—pyrrole, furan, thiophene, indole.

(d) **Elimination reactions**: E1, E2 and E1CB mechanism; orientation in E2 reactions—Saytzeff and Hoffmann; pyrolytic syn elimination—acetate pyrolysis, Chugaev and Cope eliminations.

(e) **Addition reactions**: Electrophilic addition to \( \text{C} = \text{C} \) and \( \text{C} \equiv \text{C} \), Nucleophilic addition to \( \text{>C} = \text{O} \), \( \text{C} = \text{N} \), conjugated olefins and carbonyls.

(f) **Rearrangements**: Pinacol-pinacolone, Hoffmann, Beckmann, Baeyer-Villiger, Favorskii, Fries, Claisen, Cope, Stevens and Wagner-Meerwein rearrangements.

3. **Pericyclic reactions**: Classification and examples; Woodward-Hoffmann rules electro cyclic reactions, cycloaddition reactions \([2+2 \text{ and } 4+2]\) and sigmatropic shifts \([1, 3; 3, 3 \text{ and } 1, 5]\), FMO approach.

4. **Chemistry and mechanism of reactions**: Aldol condensation (including directed-aldo condensation), Claisen condensation, Dieckmann, Perkin, Knoevenagel, Wittig, Clemmensen, Wolff-Kishner, Cannizzaro and von Richter reactions; Stobbe, benzoin and acyloan condensations; Fischer indole synthesis, Skraup synthesis, Bischler-Napieralski, Sandmeyer, Reimer-Tiemann and Reformatsky reactions.

5. **Polymeric Systems**
(a) **Physical chemistry of polymers**: Polymer solutions and their thermodynamic properties; number and weight average molecular weights of polymers. Determination of molecular weights by sedimentation, light scattering, osmotic pressure, viscosity, end group analysis methods.

(b) **Preparation and properties of polymers**: Organic polymers—polyethylene, polystyrene, polyvinyl chloride, Teflon, nylon, terylene, synthetic and natural rubber. Inorganic polymers—phosphonitrilic halides, borazines, silicones and silicates.

(c) **Biopolymers**: Basic bonding in proteins, DNA and RNA.

6. **Synthetic uses of reagents**: OsO₄, HIO₄, CrO₃, Pb(OAc)₄, SeO₂, NBS, B₂H₆, Na-Liquid NH₃, LiAlH₄, NaBH₄, n-BuLi, MCPBA.

7. **Photochemistry**: Photochemical reactions of simple organic compounds, excited and ground states, singlet and triplet states, Norrish-Type I and Norrish-Type II reactions, Photo Fries, di-Ü-methane rearrangements.

8. **Principles of spectroscopy and applications in structure elucidation**

(a) **Rotational spectra**—diatomic molecules; isotopic substitution and rotational constants.

(b) **Vibrational spectra**—diatomic molecules, linear triatomic molecules, specific frequencies of functional groups in polyatomic molecules.

(c) **Electronic spectra**: Singlet and triplet states. n → Ü * and Ü Ü * transitions; application to conjugated double bonds and conjugated carbonyls—Woodward-Fieser rules.

(d) **Nuclear magnetic resonance**: Isochronous and anisochronous protons; chemical shift and coupling constants; Application of H NMR to simple organic molecules.

(e) **Mass spectra**: Parent peak, base peak, daughter peak, metastable peak, fragmentation of simple organic molecules, Ü-cleavage, McLafferty rearrangement

(f) **Electron spin resonance**: Inorganic complexes and free radicals.

Engineering Mechanics:

Units and Dimensions, SI Units, Vectors, Concept of Force, Concept of particle and rigid body. Concurrent, Non Concurrent and parallel forces in a plane, moment of force and Varignon’s theorem, free body diagram, conditions of equilibrium, Principle of virtual work, equivalent force system.

First and Second Moment of area, Mass moment of Inertia.

Static Friction, Inclined Plane and bearings.

Kinematics and Kinetics:

Strength of Materials:

Simple Stress and Strain, Elastic constants, axially loaded compression members, Shear force and bending moment, theory of simple bending, Shear Stress distribution across cross sections, Beams of uniform strength, Leaf spring. Strain Energy in direct stress, bending & shear.

Deflection of beams: Mecaulay’s method, Mohr’s Moment area method, Conjugate beam method, unit load method. Torsion of Shafts, Transmission of power, close coiled helical springs, Elastic stability of columns, Euler’s Rankine’s and Secant formulae. Principal Stresses and Strains in two dimensions, Mohr’s Circle, Theories of Elastic Failure, Thin and Thick cylinder: Stresses due to internal and external pressure–Lame’s equations.

 Structural Analysis:
Castigliano’s theorems I and II, unit load method of consistent deformation applied to beams and pin jointed trusses. Slope-deflection, moment distribution, Kani’s method of analysis and column Analogy method applied to indeterminate beams and rigid frames.

Rolling loads and Influences lines: Influences lines for Shear Force and Bending moment at a section of beam. Criteria for maximum shear force and bending Moment in beams traversed by a system of moving loads. Influences lines for simply supported plane pin jointed trusses.

Arches: Three hinged, two hinged and fixed arches, rib shortening and temperature effects, influence lines in arches.

Plastic Analysis of beams and frames: Theory of plastic bending, plastic analysis, statical method, Mechanism method.

Unsymmetrical bending: Moment of inertia, product of inertia, position of Neutral Axis and Principle axes, calculation of bending stresses.

SDOF & MDOF, Response spectra, nature of Earthquake forces, frequency and mode shapes, IS 1893, simple methods of designs.

CAD and Computer Applications in Civil Engineering: Simple programming in FORTRAN and C++, awareness on AUTOCAD, STAAD/ SAP. Simple computations on earthworks, road works, analysis of rates, cost estimation.

**Part-B**

**Design of Structures: Steel, Concrete and Masonry Structures.**

*(BIS, Railway & IRC Codes are permitted)*

**Structural Steel Design:**

Structural Steel: Factors of safety and load factors. Riveted, bolted and welded joints and connections. Design of tension and compression member, beams of built up section, riveted and welded plate girders, gantry girders, stanchions with battens and lacings, slab and gusseted column bases.

**Design of Concrete and Masonry Structures:**

Cantilever and Counterfort type retaining walls.

Water tanks: Design requirements for Rectangular and circular tanks resting on ground, Intz tank.

Prestressed concrete: Methods and systems of prestressing, anchorages, Analysis and design of sections for flexure based on working stress, loss of prestress.

Design of brick masonry as per I.S. Codes

Design of masonry retaining walls.

Part-C

Fluid Mechanics, Open Channel Flow and Hydraulic Machines

Fluid Mechanics: Fluid properties and their role in fluid motion, fluid statics including forces acting on plane and curve surfaces.

Kinematics and Dynamics of Fluid flow: Velocity and accelerations, stream lines, equation of continuity, irrotational and rotational flow, velocity potential and stream functions, flownet, methods of drawing flownet, sources and sinks, flow separation, free and forced vortices.

Control volume equation, continuity, momentum, energy and moment of momentum equations from control volume equation, Navier-Stokes equation, Euler’s equation of motion, application to fluid flow problems, pipe flow, plane, curved, stationary and moving vanes, sluice gates, weirs, orifice meters and Venturi meters.

Dimensional Analysis and Similitude: Buckingham’s Pi-theorem, dimensionless parameters, similitude theory, model laws, undistorted and distorted models.

Laminar Flow: Laminar flow between parallel, stationary and moving plates, flow through circular pipes.

Boundary layer: Laminar and turbulent boundary layer on a flat plate, laminar sublayer, smooth and rough boundaries, drag and lift.
Turbulent flow through pipes: Characteristics of turbulent flow, velocity distribution and variation of pipe friction factor, hydraulic grade line and total energy line, siphons, expansion and contractions in pipes, pipe networks, water hammer in pipes and surge tanks.

Open channel flow: Uniform and non-uniform flows, momentum and energy correction factors, specific energy and specific force, critical depth, resistance equations and variation of roughness coefficient, rapidly varied flow, flow in contractions, flow at sudden drop, hydraulic jump and its applications, surges and waves, gradually varied flow, classification of surface profiles, control section, step method of integration of varied flow equation, moving surges and hydraulic bore.

Hydraulic Machines and Hydropower:

Centrifugal pumps–Types, characteristics, Net Positive Suction Head (NPSH), specific speed. Pumps in parallel.

Reciprocating pumps, Air Vessels, Hydraulic ram, efficiency parameters, Rotary and positive displacement pumps, diaphragm and jet pumps.

Hydraulic turbines, Types classification, Choice of turbines, performance parameters, controls, characteristics, specific speed.

Part-D

Geo-technical Engineering

Types of soil, phase relationships, consistency limits, particles size distribution, classifications of soil.

Capillary water and structural water, effectives trees and pore water pressure, Darcy’s Law, factors affecting permeability, determination of permeability, permeability of stratified soil deposits.

Seepage pressure, quick sand condition, compressibility and consolidation, Terzaghi’s theory of one dimensional consolidation, consolidation test.

Compaction of soil, field control of compaction. Total stress and effective stress parameters, pore pressure coefficients.

Shear strength of soils, Mohr Coulomb failure theory, Shear tests.
Earth pressure at rest, active and passive pressures, Rankine’s theory, Coulomb’s wedge theory, earth pressure on retaining wall, sheetpile walls, Braced excavation.

Evaluation of Bearing capacity, Terzaghi and other important theories, net and gross bearing pressure, IS 6403.

Immediate and consolidation settlement, use of IS8002.

Stability of slope, Total Stress and Effective Stress methods, Conventional methods of slices, stability number.

Subsurface exploration, methods of boring, sampling, penetration tests, pressure meter tests.

Essential features of foundation, types of foundation, design criteria, choice of type of foundation, stress distribution in soils, Boussinessq’s theory, Newmarks’s chart, pressure bulb, contact pressure, applicability of different bearing capacity theories, evaluation of bearing capacity from field tests, allowable bearing capacity, Settlement analysis, allowable settlement.

Proportioning of footing, isolated and combined footings, rafts, buoyancy rafts, Pile foundation, types of piles, pile capacity, static and dynamic analysis, design of pile groups, pile load test, settlement of piles, lateral capacity. Foundation for Bridges. Ground improvement techniques–preloading, sand drains, stone column, grouting, soil stabilisation.

---

**Paper-II**

**Part-A**

**Construction Technology, Equipment, Planning and Management**

1. **Construction Technology** :

Engineering Materials :

Construction:

Functional planning of building: Building orientation, circulation, grouping of areas, privacy concept and design of energy efficient building; provisions of National Building Code.

Building estimates and specifications; Cost of works; valuation.

2. Construction Equipment:

Standard and special types of equipment, Preventive maintenance and repair, factors affecting the selection of equipment, economical life, time and motion study, capital and maintenance cost.

Concreting equipments: Weigh batcher, mixer, vibration, batching plant, Concrete pump.

Earth-work equipment: Power shovel hoe, bulldozer, dumper, trailors, and tractors, rollers, sheep foot roller.

3. Construction Planning and Management: Construction activity, schedules, job layout, bar charts, organization of contracting firms, project control and supervision. Cost reduction measures.

Network analysis: CPM and PERT analysis, Float Times, cashing of activities, contraction of network for cost optimization, up dating, Cost analysis and resource allocation.

Elements of Engineering Economics, methods of appraisal, present worth, annual cost, benefit-cost, incremental analysis. Economy of scale and size. Choosing between alternatives including levels of investments. Project profitability.

Part-B

Survey and Transportation Engineering

Railways: Permanent way, sleepers, rail fastenings, ballast, points and crossings, design of turn outs, stations and yards, turntables, signals, and interlocking, level-crossing. Construction and maintenance of permanent ways: Superelevation, creep of rail, ruling gradient, track resistance, tractive effort, relaying of track.

Drainage of roads: Surface and sub-surface drainage.

Part-C

Hydrology, Water Resources and Engineering:

Hydrology: Hydrological cycle, precipitation, evaporation, transpiration, depression storage, infiltration, overland flow, hydrograph, flood frequency analysis, flood estimation, flood routing through a reservoir, channel flow routing-Muskingam method.

Ground water flow: Specific yield, storage coefficient, coefficient of permeability, confined and unconfined aquifers, aquifers, aquitards, radial flow into a well under confined and unconfined conditions, tube wells, pumping and recuperation tests, ground water potential.

Water Resources Engineering: Ground and surface water resource, single and multipurpose projects, storage capacity of reservoirs, reservoir losses, reservoir sedimentation, economics of water resources projects.

Irrigation Engineering: Water requirements of crops: consumptive use, quality of water for irrigation, duty and delta, irrigation methods and their efficiencies.

Canals: Distribution systems for canal irrigation, canal capacity, canal losses, alignment of main and distributory canals, most efficient section, lined canals, their design, regime theory, critical shear stress, bed load, local and suspended load transport, cost analysis of lined and unlined canals, drainage below lining.
Water logging: causes and control, drainage system design, salinity and its control.

Canal structures: Elements of cross regulators, head regulators, canal falls, aqueducts, metering flumes and canal outlets.

Diversion head work: Principles and design of weirs on permeable and impermeable foundation, Khosla’s theory. Principles of operation of Energy, Dissipators, stilling basin, silt excluders.

Storage works: Types of dams, design, principles of rigid gravity and earth dams, stability analysis, foundation treatment, joints and galleries, control of seepage.

Spillways: Spillway types, crest gates, energy dissipation.

River training: Objectives of river training, methods of river training.

---

**Part-D**

**Environmental Engineering**

**Water Supply**: Estimation of surface and subsurface water resources, predicting demand for water, impurities, of water and their significance, physical, chemical and bacteriological analysis, waterborne diseases, standards for potable water.

**Intake of water**: Types of Intakes, pumping and gravity schemes. Water treatment: principles of coagulation, flocculation and sedimentation; slow-; rapid-, pressure-, filters; chlorination, softening, removal of taste, odour and salinity.

**Water storage and distribution**: storage and balancing reservoirs: types, location and capacity. Distribution system: layout, hydraulics of pipe lines, pipe fittings, valves including check and pressure reducing valves, meters, analysis of distribution systems, leak detection, maintenance of distribution systems, pumping stations and their operations.

**Sewerage systems**: Domestic and industrial wastes, storm sewage–separate and combined systems, flow through sewers, design of sewers, sewer appurtenances, manholes, inlets, junctions, syphon, Plumbing in buildings.

**Sewage characterisation**: BOD, COD, solids, dissolved oxygen, nitrogen and TOC. Standards of disposal in normal water course and on land.

**Sewage treatment**: Working principles, units, Grit chambers, sedimentation tanks, trickling filters, oxidation ponds, activated sludge process, septic tank, disposal of sludge, recycling of waste water.
Solid waste: collection and disposal in rural and urban contexts, management of long-term ill-effects.

Unit – I - Financial Accounting

Accounting as a financial information system; Impact of behavioural sciences. Accounting Standards e.g., Accounting for Depreciation, Inventories, Gratuity, Research and Development Costs, Construction Contracts, Revenue Recognition, Fixed Assets, Contingencies, Foreign Exchange Transactions, Investments and Government Grants. Problems of Company Accounts relating to Amalgamation, Absorption and Reconstruction of companies and Valuation of Shares and Goodwill.

Unit – II - Cost Accounting

Marginal Costing; Techniques of segregating semi-variable costs into fixed and variable costs.

Cost-volume-profit relationship; Aid to decision making including pricing decisions, shutdown etc.

Unit – III - Taxation

Definitions. Basis of Charge. Incomes which do not form part of Total Income.

Simple problems of Computation of income under various heads, i.e., Salaries, Income from House Property, Profits and Gains from Business or Profession, Capital Gains, Income of Other persons included in Assessee's Total Income.

Aggregation of income and Set off/Carry Forward of Loss.

Deductions to be made in Computing Total Income.

Unit – IV - Auditing

Audit of Cash Transactions, Expenses, Incomes, Purchases and Sales.
Valuation and Verification of Assets with special reference to Fixed Assets, Stocks and Debts.

Verification of Liabilities.

Audit of limited companies; Appointment, Removal, Powers, Duties and Liabilities of Company Auditor, Significance of 'true and fair', MAOCARO report (Manufacturing and Other Companies Audit Report Orders).

Auditor's report and qualifications therein.

Special points in the audit of different organisations like Clubs, Hospitals, Colleges, and Charitable Societies.

**Part-II - Business Finance and Financial Institutions.**

Unit – V  - Financial Analysis and Management of working capital.

  Financial Analysis as a Diagnostic Tool.

  Management of Working Capital and its Components-Forecasting Working Capital needs, Inventory, Debtors, Cash and Credit Management.

Unit – VI  - Investment Decisions and Cost of Capital.

  Investment Decisions-Nature and Scope of Capital Budgeting-Various types of decisions including Make or Buy and Lease or Buy. Techniques of Appraisal and their applications.

  Consideration of Risk and Uncertainty, Analysis of Non-financial Aspects.

  Rate of Return on Investments-Required Rate of Return-its measurement-Cost of Capital-Weighted Average Cost-Different Weights.

Unit – VII  - Capital Structure and Valuation of Firms and Securities.

Concepts of Valuation-Valuation of firm's Fixed Income Securities and Common Stocks.

Raising finance-short term and long term. Bank finance-norms and conditions.

Financial Distress-Approaching BIFR under Sick Industrial Undertakings Act: Concept of Sickness, Potential Sickness, Cash Loss, Erosion of Net worth.

Monetary and Credit policy of Reserve Bank of India.

Paper-II - Organisation Theory and Industrial Relations

Part-I - Organisation Theory

Organisation goals; Primary and Secondary goals, Single and Multiple goals, End-means chain-Displacement, succession, expansion and multiplication of goals. Formal organisation; Type, Structure-Line and Staff, Functional Matrix, Informal Organisation-functions and limitations.

Unit – II - Organisation Theory.

Evolution of Organisation theory;

Classical, Neo-classical and System approach-Bureaucracy; Nature and basis of power, Sources of Power, Power Structure and Politics.

Unit – III - Organisation Behaviour.

Unit – IV – Conflict Management.

Part-II - Industrial Relations.

Unit – V- Concept of Industrial Relations.

Nature and Scope of Industrial Relations, the Socio-Economic set-up, Need for positive approach – Industrial Relation in India.

Workers’ Participation in Management; Philosophy, Rationale, Present day state of affairs and Future prospects.

Unit - VI – Manpower Planning.

Role of Personnel Department in Recruitment, Selection, Training and Development, Performance Appraisal.
Unit – VII - Absenteeism and Labour Turnover.

Unit - VIII - Salary and Wage Administration.

Determination of Wage Policy, Methods of Remuneration, Methods of Incentives schemes, Bonus, wage differentials, Employee Stock Option Schemes,(ESOPs), Sweat Equity, Essential features of a good Remuneration and Incentive Scheme.

2. Full employment and Says' Law - underemployment equilibrium - Keynes' Theory of employment (and income) determination - Critiques of Keynesian Theory.

3. Functions of money - Measurement of price level changes - the Quantity theory of money, its variants and critiques thereof - Demand for and supply of money - The money multiplier. Theories of determination of Interest rate - Theories of inflation and control of inflation.

5. Public finance and its role in market economy: allocative efficiency, stabilization, distribution and development. Sources of revenue - Forms of Taxes and subsidies, their incidence and effects; Limits to taxation, loans, crowding-out effects, and limits to borrowing. Types of budget deficits - Public expenditure and its effects.

6. **International Economics**

   (i) Old and New theories of International Trade.

   a) Comparative advantage, Terms of trade and offer curve.

   b) Product cycle and Strategic trade theories.

   c) (i) Trade as an engine of growth

      (ii) Forms of protection.

   (iii) Balance of Payments Adjustments: Alternative Approaches.

      a) Price versus income, income adjustments under fixed exchange rates.

      b) Theories of policy mix.

      c) Exchange rate adjustments under capital mobility.
d) Floating Rates and their implications for developing countries;

(iv) (a) IMF and the World Bank.

(b) W.T.O.

(c) Trade Blocks and monetary unions.

7. Growth and development.

(i) Theories of growth: Classical and neo-classical theories; The Harrod model; economic development under surplus Labour; wage-goods as a constraint on growth; relative importance of physical and human capitals in growth; innovations and development; Productivity, its growth and source of changes thereof. Factors determining savings to income ratio and the capital-out-put ratio.

(ii) Main features of growth: Changes in Sectoral compositions of income; Changes in occupational distribution; changes in income distribution; changes in savings and investment and in pattern of investment. Case for and against industrialization. Significance of agriculture in developing countries.

(iii) Relation between state, planning and growth, Changing roles of market and plans in growth, economic policy and growth.

(iv) Role of foreign capital and technology in growth. The significance of multi-nationals.

(v) Welfare indicators and measures of growth-Human development indices-The basic needs approach.

(vi) Concept of sustainable development; convergence of levels of living of developed and developing countries; meaning of self-reliance in growth and development.

**Paper-II**

I. Indian Economics in Post-Independent Era-Contributions of Vakil, Gadgil and Rao. National and per capita Income; Patterns, Trends, Aggregate and sectoral-
composition and changes therein. Broad factors determining National Income and its
distribution; Measures of poverty. Trends in below poverty-line proportion.

II. Employment: Factors determining employment in short and long periods. Role
of capital, wage-goods, wage-rate and technology. Measures of unemployment. Relation
between income, poverty and employment, and issues of distribution and social justice.

Agriculture: Institutional set-up of land system, size of land holdings and
efficiency-Green Revolution and technological changes-Agricultural prices and terms of
trade-Role of public distribution and farm-subsidies on agricultural prices and
production. Employment and poverty in agriculture-Rural wages-employment schemes-
growth experience-land reforms. Regional disparities in agricultural growth. Role of
Agriculture in export.

III. Industry: Industrial system of India: Trends in Composition and growth. Role
of public and private sectors, Role of small and cottage industries. Indian industrial
Strategy-Capital versus consumer goods, wage-goods versus luxuries, capital-intensive
versus labour-intensive techniques, Sickness and high-cost Industrial policies and their
effects. Recent moves for liberalisation and their effects on Indian industry.

IV. Money and banking: The monetary institutions of India: Sources of reserve
money, Techniques of money supply regulation under open economy. Functioning of
money market in India. Budget deficit and money supply. Issues in Reform of Monetary
and Banking Systems.

V. Index numbers of price levels-Course of Price level in post-Independence period-
sources and causes of inflation-role of monetary and supply factors in price level
determination-policies towards control of inflation. Effects of inflation under open
economy.

VI. Trade, balance of payments and exchange: Foreign trade of India; composition
and direction shifts in trade policy from import substitution to export promotion. Impact
of liberalisation on pattern of trade. India's external Borrowings-the Debt problem.
Exchange rate of the rupee; Devaluations, depreciations and their effects on balance of
payments-convertibility on current and capital accounts-rupee in an open economy.
Integration of Indian economy with world economy-India and the WTO.

VII. Public Finance and Fiscal Policy: Composition of and trends in India's Public
Revenue and Expenditure-Role of Taxes (direct and indirect) and subsidies-Fiscal
deficits-public expenditures and their significance-Public Finance and Inflation-Debt
trap and Limiting Government's debt-Recent fiscal policies and their effects.

VIII. Economic Planning in India :- Strategies for Growth and social justice; Planning
and increasing the growth rate.Trends in Savings and investment- Trends in Savings to
Income and capital-output ratios - Productivity, its sources, growth and trends - growth versus distribution - Transition from Central Planning to indicative planning - relation between Market and Plan-

EDUCATION

PAPER - I
Principles of Education and Human Development.

(Part-A)

Unit-I  Concept of Education :

Education – meaning, nature, scope & process with reference to Eastern and Western thoughts.

Education as social process.

Education and its agencies.

Education for Training in cognitive, affective and Psychomotor domains.

Education in Ancient India – The concept of Dharma, Artha, Kama & Mokhya.

Education and its features in the Vedic system- Budhist system & Islamic system with reference to the concept aims, process and significance .

Unit –II  Philosophical foundations of Education.

Contributions of Idealism, Naturalism, Realism, Pragmatism to the present educational system, existentialism, eclecticism.

Contributions of Gandhi, Tagore, Aurobindo, Vivekananda, Froebel, Herbart to the field of Education.

Contributions of Pandit Utkalmani Gopabandhu Dash and Kabibar Radhanath Ray to the development of Education in Orissa.

Unit – III  Sociological Foundations of Education.

Meaning and nature of Educational Sociology.

Relationship of Sociology and Education,

Education-as social sub-system :- specific characteristics.

Education and the home

Education and the community with special reference to Indian society.

Education and modernization

Education and politics

Education and religion

Education and culture

Education and democracy

Socialization of the child

Meaning and nature of social change

Education as related to social stratification and social mobility.
Education as related to social equity and equality of educational opportunities.
Constraints on social change in India (Caste, ethnicity, class, language, religion, regionalism).
Education of the socially and economically disadvantaged sections of the society with special reference to Scheduled Castes and Scheduled Tribes, women and rural population.

Unit – IV Development of Modern Indian Education.
Development of Indian Education – During pre independent and Post independent period.
Secondary Education Commission (1952-54)
Indian Education Commission. (1964-66)
National Education Policy (1968)

( Part- B)

Unit – V Growth and Development.
Concept of Growth, Development and Maturation.
Problems of adolescents.
Psychology of adult learners.
Defence mechanism :- stress, frustration, conflict, coping with conflict:

Unit – VI Teaching Learning Process.
Learning : Concept and process.
Theories of Learning: Conditioning and cognitive theories with special referent to Thorndike’s connectionism, Skinner’s operant conditioning, Contributions of Gagne, Ausubel, Bloom, Piaget, Bruner to learning process. Constructivism in Education.
Transfer of Learning, Theories of Transfer.

Motivation: Theories, Techniques of motivating the learners with special reference to Need Hierarchy Theory (Maslow) and Achievement Motivation (Atkinson).

**Unit - VII Higher Mental or Cognitive abilities:**

Intelligence: Concept, meaning, and measurement of Intelligence, Special reference to S.I., Model of Intellect (Guilford), Triarchic Theory (Sternberg), Multiple Intelligences (Gardner), Emotional Intelligence (E.I.), Spiritual Intelligence (S.I.).

**Unit – VIII Evaluation in Education.**

Evaluation – concept, types - Placement, Formative, Diagnostic, Summative Continuous and comprehensive evaluation.

Semester system and Question Bank.

Measures of Central Tendencies: – Mean, media and mode

Measures of variability: - range, average deviation quartile deviation & standard deviation.

Standard score: - ‘z’ score, ‘T’ score, “c” score & stennine score.

Normal probability curve: - meaning, properties and uses in interpreting test-results.

Monitoring system for programme Evaluation at different levels of Education.

---

**PAPER – II**

**TRENDS AND ISSUES IN EDUCATION**

**Section – A**

**Unit – I Administration, Management & Supervision of Education–**
Concept of Administration & Supervision

Administrative Structure of Education in the State and Centre.

Structure and Functions of UGC,NAAC, AIU, AICTE, NCTE, ICSSR, ICA, CABE, NCERT, NIEPA, CBSE.

SCERT, SIET, ELTI, SRC for A.E, BSE, CHSE.

School Complex, School Improvement Planning and Institutional Planning and Management.

Equality of Educational Opportunities, Universalisation of Elementary Education.

DPEP, Sarvasikshya Abhiyan, NLM.

Finance Management in Education at – Primary, Secondary, Higher, Adult & Nonformal and Technical Education.

Grant in Aid system, Role of Central, State and Local bodies in Education finance. Classification of Educational Expenditures.

Unit – II Issues in Education

Population Education, Adolescent Education.

Adult and Non-formal Education- Need, Problems and Strategies.

Vocationalisation of Education – Need, importance; and programmes.

Distance and Continuing Education – Need, importance and functions.

Education for All.

Work-experience , Socially Useful Productive work.

Environmental Education – need, causes of pollution & preventive measures.

Health, Nutrition & School Hygiene.

Unit – III Education of Children with Special Needs.

Identification of Children with special needs.

Education for Mentally challenged, visually impaired, Hearing impaired; and Orthopedically Handicapped children – Characteristics, degree of impairment, Learning disability, Educational programmes, Segregation to Inclusion.
Education of Gifted and Creative children – Characteristics and Educational programmes.

Education for socially and economically disadvantaged children of the society with reference to S.C., S.T., Women and Rural population.

Role of Teachers in the Education of Children with special needs.

**Unit – IV Educational Technology.**

Meaning and Scope of Educational Technology.

Educational Technology as system approach to education and its characteristics.

Components of Educational Technology – Software and Hardware

Multi-Media Approach in Educational Technology.

Designing Instructional Strategies-Lecture, Team-teaching, Discussion, Pannel Discussion, Seminars, Symposia and Tutorials.

Communication process-Concept of communication, principles, models and barriers.

Programmed learning, Microteaching, Simulated Teaching.

**Part – B**

**Unit – V Education & National Development.**

Education & Modernisation

Education and Culture

Education and Religion

Education for National Integration and International Understanding.

Education for Human Resource Development.

Education related to social stratification and social mobility.

**Unit – VI Teacher Education**

Objectives, level specificity of Teacher Education

Strategies for Teacher Education – Pre service, In-service programmes.

Staff development programmes – Oriental course, refresher course.
Summer school, - Linking the programmes to career advancement.

Teacher as a role model,

Teaching as a profession, professional ethics.

Role of Teachers Organisation for development of Primary & Secondary Education and professional development of teachers.

**Unit – VII National System of Education**

Salient features as proposed in NPE for various stages.

Objectives of Vocational Education.

National system of Education – need, objective structure & curriculum.

Concept of ensuring Minimum Learning Out-comes, measures for achieving Minimum Learning Out-comes in each subject area.

**Unit – VIII Information Communication Technology (ICT) -**

Concept of computer and types.

Software, Hardware and its application

Operating system, and application software

Preparation & Delivery of Lessons/Lectures by using Computer – Collection, Preparation, presentation, evaluation, reporting.

Use of Internet (WWW) in professional development – Collection & processing of information, presentation, reporting and evaluation.

**ELECTRICAL ENGINEERING**

Paper-I
**Electrical Circuits–Theory and Applications**

Circuit components; network graphs; KCL, KVL; circuit analysis methods: nodal analysis, mesh analysis; basic network theorems and applications; transient analysis: RL, RC and RLC circuits; sinusoidal steady state analysis; resonant circuits and applications; coupled circuits and applications; balanced 3-phase circuits. Two-port networks, driving point and transfer functions; poles and zeros of network functions. Elements of networks synthesis. Filter-theory: design and applications. Active filters. Circuit simulation: Input formats; mathematical modelling; solution of equations; output formats; SPICE.

**Signals & Systems**

Representation of continuous–time and discrete-time signals; LTI systems; convolution; impulse response; time-domain analysis of LTI systems based on convolution and differential/difference equations. Fourier transform, Laplace transform, Z-transform, Transfer function. Sampling and recovery of signals DFT, FFT Processing of analog signals through discrete-time systems.

**E.M. Theory**

**Analog Electronics**

**Digital Electronics**
Boolean algebra; minimisation of Boolean functions; logic gates; digital IC families (DTL, TTL, ECL, MOS, CMOS). Combinational circuits: arithmetic circuits, code converters, multiplexers and decoders. Sequential circuits: latches and flip-flops, counters and shift-registers. Comparators, timers, multivibrators. Sample and hold circuits, ADCs and DACs. Semiconductor memories. Programmable logic controller.

**Energy Conversion**

Principles of electromechanical energy conversion: Torque and emf in rotating machines. DC machines: characteristics and performance analysis; starting and speed control of motors. Transformers: principles of operation and analysis; regulation, efficiency; 3-phase transformers, 3-phase induction machines: Characteristics, speed control. 3-phase synchronous machines: Characteristics, parallel operations. Reactive power control. Special machines: stepper motors, brushless dc motors, permanent magnet motors single-phase motors; Universal Motors.

**Power Electronics and Electric Drives:**

Semiconductor power devices: diode, transistor, thyristor, triac, GTO, MOSFET and IGBT; static characteristics and principles of operation; triggering circuits; bridge converters: fully-controlled and half-controlled; principles of choppers and inverters; basic concepts of speed control of dc and ac motor drives, applications of variable-speed drives.

**Analog Communication**

Random variables: continuous, discrete; probability, probability functions. Statistical averages; probability models; Random signals and noise: white noise, noise equivalent bandwidth; signal transmission with noise; signal to noise ratio. Linear CW modulation: Amplitude modulation: DSB, DSB-SC and SSB. Modulators and Demodulators; Phase and Frequency modulation: PM & FM signals; narrowband FM; generation & detection of FM and PM, Deemphasis, Preemphasis. CW modulation system: Superhetrodyne receivers, AM receivers, communication receivers, FM receivers, phase locked loop, SSB receiver, Signal to noise ratio calculation for AM and FM receivers.

**Microwaves and Antenna**

Electromagnetic radiation, Propagation of waves: ground waves, sky wave, space wave, tropospheric scatter propagation. Extraterrestrial communications. Antenna: Various types, gain, resistance, band-width, beamwidth and polarization, effect of ground. Antenna coupling; high frequency antennas;
microwave antennas; special purpose antennas. Microwave Services: Klystron, magnetron, TWT, gun diodes, Impatt, Bipolar and FETs, Microwave integrated circuits. Microwave measurements.

Paper-II

Control Systems

Electrical Engineering Materials

Microprocessors and microcomputers

8-bit microprocessor: architecture, CPU, module design, memory interfacing, I/O, Peripheral controllers, Application. IBM PC architecture: overview, introduction to DOS, Advanced microprocessors.

Measurement and Instrumentation

Error analysis; measurement of current, voltage, power, energy, power-factor, resistance, inductance, capacitance and frequency. Electronic measuring instruments: multimeter, CRO, digital voltmeter, frequency counter, Q-meter, spectrum-analyser, distortion-meter. Transducers: thermocouple, thermistor,
LVDT, strain-gauge, piezo-electric crystal. Use of transducers in measurements of non-electrical quantities. Data-acquisition systems.

**IC Technology**

Overview of IC Technology. Unit-steps used in IC fabrication: wafer cleaning, photo-lithography, wet and dry etching, oxidation, diffusion, ion-implantation, CVD and LPCVD techniques for deposition of poly-silicon, silicon, silicon-nitride and silicon di-oxide; metallisation and passivation.

**Power Systems: Analysis and Control**

Steady-state performance of overhead transmission lines and cables; principles of active and reactive power transfer, Distribution system; Per-unit quantities; Bus admittance and impedance matrices; load flow; economic operation; Symmetrical components, analysis of symmetrical and unsymmetrical faults. Concept of system stability: swing curves and equal area criterion. Flexible AC Transmission Systems (FACTS). Computer control and Automation: Introduction to energy control centres; various states of a power system; SCADA systems and RTUs.

**Power system protection**

**Non-conventional Energy Sources and Energy Management**

**Digital Communication**

Pulse code modulation (PCM), differential pulse code modulation (DPCM), delta modulation (DM), Digital modulation and demodulation schemes: amplitude,
phase and frequency keying schemes (ASK, PSK, FSK). Error control coding: error detection and correction, linear block codes, convolution codes. Information measure and source coding. Data networks, 7-layer architecture.

**Satellite Communication, Radar and TV**

**Fibre Optic System**

Multiplexing: Time division multiplexing, Frequency Division multiplexing. Optical properties of materials: Refractive index absorption and emission of light, optical fibres, lasers and optoelectronic materials Fibre optic links.
Section-A

1. **General Fisheries**: Role of fisheries and aquaculture in Indian economy and human health. Fisheries resources of India. Utilization of different aquatic resources for fish production. Geographical distribution of fishes in India. Fisheries education and research in India. Organisational setups in fisheries development at national and international context. Frontier research and global scenario in fisheries and aquaculture. Growth and development of fisheries and aquaculture during different plan periods in India. Fisheries and Aquaculture Regulatory Acts. Disaster awareness related to fisheries and aquaculture.

2. **Fishery Biology and Resource Management**:

2.2 **Anatomy and physiology**: Anatomy and physiology of cartilaginous fish (*scoliodon*) bony fishes (Carps, Murrels, Catfish, Seebass), and shell fishes (prawn, shrimp, crab, squids, cuttlefish, *lamellidens*, mussels) with particular reference to their skeletal, digestive, circulatory, respiratory, excretory, reproductive and nervous system. Osmoregulation and migration. Feeding and breeding habits of commercially important finfishes and shellfishes. Age and Growth-growth curve, absolute and relative growth, isogonic and heterogonic growth, Walford growth transformation.

2.3 **Reproductive Biology and Endocrinology**: Sex ratio, Age and size at maturity, maturity stages, gonadosomatic index, fecundity, development of gametes, vitellogenesis structure of sperm and ovum, types of egg, spawning and developmental biology of commercially important finfishes and shellfishes (bonyfish, prawn, shrimps and craps) Natural

3. Biochemistry and Microbiology:

Section-B

4. Aquatic Environment:
4.1. **Inland**: Inland water ecosystem. Biological communities; phytoplankton, zooplankton, benthos, algae and macrophytes. Productivity; food chain, food web and nutrient cycles. Classification and distribution of lakes, ponds, streams, reservoirs, estuaries, mangroves and flood plain. Wet lands, their physico-chemical and biological characteristics in relation to fisheries and aquaculture.

4.3. **Aquatic pollution**: Organic, inorganic and radioactive pollutants in water bodies and their effects. Bioaccumulation and biomagnifications. Sewage treatment and effluent management.

5. **Social Sciences**:

5.1 **Economics**: Definition, scope and role of fishery economics. Economics of fish farming, hatcheries, fishing and processing units. Financial agencies. Project planning, formulation, monitoring and evaluation. Growth and development of fisheries and aquaculture during different plan periods. Fish marketing-marine and inland fish marketing channels in India. Export marketing of fish and fishery products. Marketing management and marketing research. Cooperatives—principles and objective; structure and function of fisherman cooperatives in India. Problems and remedial measures for growth of fisheries cooperatives.

5.2 **Extension**: Concepts, principles, scope and objectives of fisheries extension. Extension machineries in fisheries development of India. Extension teaching methods-classification, relative effectiveness of methods; factors affecting choice and use of methods; Extension administration; Organizational structure of Fisheries extension; Role of FFDA, BFDA, NATP, ATMA etc. For development of fisheries and aquaculture. Extension programme planning; Participation of organizations and involvement of people in planning. Socio economic conditions of fisher folk of India. National and international extension agencies.

5.3 **Fisheries administration and legislation**: Organizational set up in fisheries and aquaculture regulatory programmes. Laws of the sea; Exclusive Economic Zone; Integrated Coastal Zone Management. Indian Fisheries Act-1897. Marine Fisheries

Section-A

1. Aquaculture:

1.2. Infrastructure: Survey, soil quality in different regions suitable for fish culture; site selection, design and construction of fish farms, hatcheries and raceways. Design and setting of aquaria for ornamental fishes.

1.4. Types of culture: Extensive, semi-intensive and intensive culture; Cage, pen, recirculatory, running water, waste water, bheel & gheri culture, Candidate species for aquaculture (freshwater, brackish water and mariculture) - Carps (Indian Major Carps, Exotic Carps), air breathing fishes, mahaseer, trouts, seabass, mullets, milkfish, groupers, freshwater prawn, shrimps, crabs, lobsters, mussels, clams, oysters, cuttlefish and sea weeds. Monoculture and Composite fish culture. Agricultural crop and live stock integration in aquaculture practices. Ornamental fish culture and pearl culture.

1.5 Fish nutrition: Culture of fish food organisms; Feeding habits and nutritional requirements of cultivable shellfishes and finfishes; Digestion, assimilation and conversion of feed. Nutritional bioenergetics of fish; Fish feed technology. Feed ingredients, probiotics, essential amino acids. Feed processing and feed dispersal. Anti-nutritional factors. Stress elements.

1.8 **Fish health management**: Health management in aquaculture; Disease development process, Defense mechanism in fish and shell fish; Parasitic diseases (protozoa, platyhelminthes, nemato helminthes, acanthocephala, crustacea, leeches, mollusca). Common bacterial, fungal and viral diseases of carp, ornamental fish, fresh water prawn and brackish water shrimp. Clinical signs and symptom, treatment and prophylaxis. Nutritional and environmental diseases of fish and shellfish and their management. Use of disinfectants, chemicals antibiotics, bioremediators, vaccines and immunostimulants in aquaculture. Quarantine, and health monitoring. Principles of fish disease diagnosis for epidemic and endemic diseases.

**Section-B**

2.Harvest and Post Harvest Technology

2.1. **Fishing Crafts and Gears**: Classification of fishing crafts; Dimensions and design of boats; Safety and stability of fishing boats; Care and maintenance of boats; Fishing accessories and deck equipments; Types of marine engines; Fishing methods of India. Modern commercial fishing methods- trawling, purse seining, gill netting and long lining. Classification of gears, yarn numbering, construction and types of twine and ropes, Natural and synthetic material for fishing gears and choice of net materials. Design and fabrication of fishing gears, floats, sinkers, anchors and buoys. Care and preservation of fishing gears.

2.2. **Biochemistry of fish**: Fish muscle chemistry, Proximate composition of fish; Fish as a source of essential amino acids, n-3 fatty acids, vitamins and minerals. Post mortem changes- rigor mortis, autolysis, microbial putrefication, lipid autoxidation. Fresh fish spoilage.

2.3. **Freezing**: Methods of fish preservation; Handling and transportation of fresh fish. Methods of chilling- icing, refrigerated sea water and chilled sea water stowage of fresh fish. Principles of low temperature preservation of fish - Freezing and cold storage of fishes and shellfishes; Types of freezers- air-blast, contact plate, cryogenic and immersion freezing; Refrigeration systems; Cold stores- warehousing and cold chain; Changes associated with frozen fishery products- protein denaturation, lipid oxidation, dehydration, driploss, and their control. Methods of thawing.

2.4. **Canning and packaging technology**: Types of canning- Conventional, high temperature short time, ultra high temperature. Containers used in canning. Steps in canning- raw material, preparatory treatments, precooking, packing, filling, exhausting, seaming, thermal processing, cooling and storage. Canning of finfish (sardine, mackerel, tuna, seer fish, pomfret, carps, prawns and shrimps) in different filling media. Principles
of thermal processing- heat resistance of microorganisms, D-value, and Z-value, heat penetration, graphical method of process calculation, F₀ value; Can defects and spoilage. Packaging materials used for fishery products.

2.5 Cured, Value-added products and byproducts: Cured fish- dried, salted, smoked fish, fermented fishery products. Value added fishery products- breadcrued and battered products, fish finger, fish cutlet, fish wafer, fish soup powder, fish burger, imitation products, paste products (fish sausage, ham, surimi products), fish pickle. Fishery byproducts- fish meal, fish silage, fish oil, fish protein concentrate, shark fin rays, chitin, chitosan, glucosamine hydrochloride, fish maws, fish glue, pearl essence, isinglass, beche-de-mer, fish peptone, ambergris, agar agar, alginic acid, carrageenan, spirulina.

2.6. Quality Control: Biochemical, microbiological and organoleptic indices of fresh fish: Spoilage microflora associated with fish and fishery products. Food poisoning microbes in fishery products-Salmonella, Clostridium, Staphylococcus, Vibrio, Listeria, Aspargilus and marine algae. Fish quality control- Quality assurance; Quality management; Hazard Analysis Critical Control Points (HACCP); ISO-9000 series, Bureau of Indian Standards (BIS) and International Standards (IS) for fish and fishery products; Quality specifications for export of Indian fishery products to European Union, USA and Japan.
PAPER – I

PART – “A”

1. **Effect of Locality Factors** : Climatic factors : Light, temperature, frost, precipitation, dew, humidity, wind; Physiographic factors : altitude, aspect, topography, microclimate, geology and soil, geology and forests, soil conditions; Biotic factors.

2. **Forest classification and Distribution** : Basis for classification, criteria for delineating forest types in India and Orissa, distribution of forest types, botanical areas : Principal sub-groups, forest types and their distribution : brief description of groups and types, Biodiversity and its preservation, Mangrove forest.

3. **Forest Regeneration** : Natural regeneration : by vegetative parts, by seeds, ecological requirements for natural regeneration, operations to be carried out for natural regeneration : natural regeneration practice for important species and types:- moist Sal forest, teak forest, bamboo forest, dry deciduous forest, moist deciduous forest, evergreen forest. Artificial regeneration : factors affecting, choice between artificial and natural regeneration, choice of species, choice between sowing and planting, introduction of exotics: procedure for artificial regeneration, seed collection and storage, nursery operation, planting out, maintenance of plantation, Role of in-vitro culture in regeneration.

5. **Silviculture of Tree species** : Definition, objects of study, relation of silviculture with forestry and its branches, Silviculture of important tree species such as *Acacia auriculiformis*, *Acacia nilotica*, *Leucaena leucocephala*, *Sesbania grandiflora*, *Cassia*

PART – “B”

6. **Forest Management system**: Systems of forest management: Clear felling system, Uniform shelterwood system, Selection system, Coppice system: Single coppice and Coppice with Standard system and Coppice with reserve system. Choice of silvicultural system: systems of management in important forest types, working plan preparation and monitoring.

7. **Production forestry**: Site productivity, productivity of Indian forests, components of production forestry, evaluation of industrial and commercial demands, management of natural forests for production objectives, plantation of industrial and commercial wood, captive plantations, socio-industrial plantation. Involvement of corporate sector in plantation forestry.

8. **Rotation and yield**: Rotation, types of rotation: physical, silvicultural, technical, rotation of maximum volume production; rotation of important species: teak sal, gambhar, eucalyptus: casuarina, subabul, wattles and bamboo, steps for reducing rotation age. Yield; yield regulation, yield from Indian forests, concept of sustained yield: principle, scope and limitation.

9. **Forest protection**: Forest degradation: illicit fellings and encroachment, grazing and lopping, forest fires, shifting cultivation, diversion of forest lands. Silvicultural fellings, plant diseases, insects, pests, plant parasites and aggressive weeds, Protection
measures:-control of illicit felling and encroachments, control of grazing and lopping, protection from animals, protection against fires, protection against disease, protection against insect pests, weed control measures.

10. **Forest Influences :** Forest and climate:- precipitation, temperature, shelterbelt and windbreak effect, humidity frost, snow fall, evapotranspiration: Forest and soil: organic matter and recycling of nutrients. Soil composition and structure, soil temperature, soil moisture, forest and water table, chemical property of soil, biological properties, Forest and hydrological cycle: Forest and interception, Forest and infiltration, forest and runoff, forest and erosion, forest and flood, forest and water yield, forest and avalanche, forest and animals; forest and biodiversity conservation, forest recreation, forest and population. Plant succession: stages of succession, climax formation. Watershed management and Wasteland development. Carbon sequestration by forest plants; Green house effect, Global warming.

**PAPER – II**

**PART – “A”**

1. **Forest Development in India**: (Post-Independence)-Forest Development in Five-Year Plan periods, Land use forest area, forest cover of the country and the State in particular.

   Environmental conservation: Importance and principles of conservation. Impact of deforestation due to various anthropic activities like mining, construction and developmental projects, forest fire.

3. **Forest Economics**: Fundamental Principles of forest economics, estimation of demand and supply, assessment and protection of market structure; role of corporate financing; socio-economic analysis and attributes of forest productivity.

4. **Wildlife management**: Common game animals and birds, wildlife conservation and management, wildlife management principles, National parks and wildlife sanctuaries, project tiger.

5. **Extension Forestry**: Agroforestry: concepts, classification, scope and management; Agroforestry systems under different agroecological zones, selection of species and role of multipurpose trees and Non wood Forest products. Food, folder, and fuelwood security, Research and extension needs; farm forestry; social forestry: objectives, scope and benefits; Joint forest management, Tribology.

**PART – “B”**

6. **Forest Genetics and Tree Improvement**: Tree improvement, its peculiarity compared to annual crop breeding objectives; causes and kinds of variability, provenance, seed source and exotics; principles and methods of tree breeding, vegetative propagation (macro & micro); progeny testing, seed production areas, seed orchards (clonal and seedlings) and their management; hybridization, polyploidee and mutation breeding. Importance of genetic resources conservation and preservation of biodiversity.

7. **Forest Mensuration**: Methods of measuring diameter, girth, height and volume of trees; form factor; Volume estimation of stand, sampling methods, yield calculation, current annual increment, mean annual increment; sample plots; yield and yield tables; scope and objectives of forest inventory; Aerial survey and remote sensing techniques.
8. **Forest surveying & Engineering**: Different methods of surveying. Leveling, importance of maps in forestry, maps and map reading; Basic principles of forest engineering, building materials and construction. Roads: objects, classification, general principles and construction. Bridges: Objects, general principles, types, simple design and construction of timber bridges.

9. **Wood and its utilization**: Wood anatomy of conifers and hardwoods, their physical and mechanical properties. Defects of wood, logging and wood extraction; Process of seasoning wood; Production of composite and improved wood, wood based industries. Uses of natural wood and processed wood.

10. **Non-wood Forest products**: Definition and scope, gums, resin, oleoresins, fibres, flosses, essential oil yielding plants; tannin dye, oilseeds, nuts, canes, bamboo, bidi leaves, medicinal plants, apiary, sericulture, lac and shellac. Collection, processing and disposal of non-wood forest products.
Physical Geography

i) **Geomorphology**: Origin of the earth, Physical conditions of the earth’s interior; continental drift; isostasy; plate tectonics; mountain building; volcanism and earthquakes; weathering and erosion, Concepts of geomorphic cycles (Davis and Penck), Landforms associated with fluvial, arid, glacial, coastal and karst region, Polycyclic landforms.

ii) **Climatology**: Temperature and pressure belts of the world; heat budget of the earth; atmospheric circulation; planetary and local winds; monsoons and jet streams; air masses and fronts; temperate and tropical cyclones; types and distribution of precipitation; Koppen’s and Thornthwaite’s classification of world climate; hydrological cycle; climatic change.

iii) **Oceanography**: Bottom topography of the Atlantic, Indian and Pacific Oceans; temperature and salinity of the oceans; ocean deposits; ocean currents and tides; marine resources and their utilizations, Coral reefs;

iv) **Biogeography**: Genesis of soils; classification and distribution of soils; soil profile; soil erosion and conservation; factors influencing world distribution of plants and animals; problems of deforestation and conservation measures; social forestry, agro-forestry.

v) **Environmental Geography**: Concept and types of environment, Environmental degradation and management. Ecosystems and their management; Energy flow and Bio-geo-chemical cycles, Global ecological imbalances–problems of pollution, global warming, reduction in bio-diversity and depletion of forests.

Section-B
Human Geography
i) **Perspectives in Human Geography**: Areal differentiation; regional synthesis; dichotomy and dualism; environmentalism; quantitative revolution and locational analysis; radical, behavioural, human and welfare approaches; Cultural regions of the world, Human development indicators.

ii) **Economic Geography**: World economic development—measurement and problems; world resources and their distribution; energy crisis; the limits to growth; World agriculture—typology of agricultural regions; Von-Thunen’s theory of agricultural location; World industries—locational patterns and locational theories of Weber; Hoover, Losch and Smith, Patterns of world trade.

iii) **Population Geography**: Growth and distribution of world population; demographic attributes; causes and consequences of migration; concepts of over–, under– and optimum population; world population problems. Races of man kind.

iv) **Settlement Geography**

Types and patterns of rural settlements; hierarchy of urban settlements; Cristaller’s Central Place Theory, concept of primate city and rank-size rule; functional classification of towns; sphere of urban influence; rural-urban fringe; satellite town; problems of urbanisation.

v) **Regional Planning**: Concept of region; types of regions and methods of regionalisation; growth centres and growth poles; regional imbalances; multi-level planning; planning for sustainable development. Rostov Model of Stages of Growth.

Note: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.

---

**Paper-II**

**Geography of India with special reference to Orissa**

**Section-A.**
i) Physical Aspects: Structure and relief; drainage system and watersheds; physiographic regions; mechanism of Indian monsoons; tropical cyclones and western disturbances; floods and droughts; climatic regions; natural vegetation, soil types and their distributions.

ii) Resources: Concept and types of resources, land, water, energy, minerals, and biotic resources, their distribution, utilisation and conservation; energy crisis.

iii) Agriculture: Infrastructure—irrigation, seeds, fertilizers, power; Types of crops agricultural productivity, agricultural intensity, crop combination, land capability; agro- and social forestry; Green Revolution - its socio-economic and ecological implications; significance of dry farming; livestock resources and White Revolution; Blue Revolution; agricultural regionalisation; agro-climatic zones.

iv) Industry: History of industrial development; locational factors of cotton, jute, iron and steel, fertilizer and paper, industries, industrial complexes and industrial regionalisation; new industrial policy; role of multinationals, liberalization and globalisation.

v) Transport, Communication and Trade: Road, railway, waterway, airway and pipeline networks and their complementary roles in regional development; growing importance of ports on national and foreign trade, trade balance; free trade and export promotion zones; developments in communication technology and its impact on economy and society.

Section-B

i) Cultural Setting: Racial and ethnic diversities; major tribes, tribal areas and their problems; role of language, religion and tradition in the formation of cultural regions; growth, distribution and density of population; demographic attributes—sex-ratio, age structure, literacy rate, work-force, dependency ratio and longevity; migration (inter-regional, intra-regional and international) and associated problems, population problems and policies.

ii) Settlements: Types, patterns and morphology of rural settlements; urban development; Census definition of urban areas; morphology of Indian cities; functional classification of Indian cities; conurbations and metropolitan regions; urban sprawl; slums and associated problems; town planning; problems of urbanisation.

iii) Regional Development and Planning: Experience of regional planning in India; Five Year Plans; integrated rural development programmes; Panchayati Raj and decentralised planning; command area development; watershed management; planning for backward area, desert, drought-prone, hill and tribal area development; multi-level planning; geography and regional planning.
iv) **Political Aspects**: Geographical basis of Indian federalism; state reorganisation; regional consciousness and national integration; international boundary of India and related issues; disputes on sharing of water resources; India and geopolitics of the Indian Ocean.

v) **Contemporary Issues**: Environmental hazards–landslides, earthquakes, Tsunami, cyclones, floods and droughts, epidemics. Issues related to environmental pollution; changes in patterns of land use; principles of environmental impact assessment and environmental management; population explosion and food security; environmental degradation; Disasters in India and their management. Problems of agrarian and industrial unrest; regional disparities in economic development; concept of sustainable growth and development.

**Note**: Candidates will be required to answer one compulsory map question pertinent to subjects covered by this paper.
**Section-A**

(i) **General Geology and Geotectonics**

(ii) **Geomorphology and Remote Sensing**

(iii) **Structural geology**

**Section-B**

(iv) **Paleontology**

(v) Stratigraphy and Geology of India

(vi) Hydrogeology and Engineering Geology

Classification of silicate structures. Occurrence, chemistry, Physical and optical characters of Feldspar, Silica, Pyroxene, Amphibole, Garnet, Olivine and Mica groups. Minerals of Carbonate and sulphide groups.

(ii) Igneous ad Metamorphic Petrology

(iii) Sedimentology

Section-B

(iv) Economic Geology

(v) Mining Geology

(vi) Geochemistry and Environmental Geology

Section-A

1. Sources of early Indian history.
2. Early pastoral and agricultural communities.
3. The Indus Civilization: its origins, nature and decline.
4. Patterns of settlement, economy, social organization and religion in India (c. 2000 to 500 B.C.) .
5. Evolution of society and culture: evidence of Vedic texts (Samhitas to Sutras).
9. India in the Gupta and post-Gupta periods (to c. 750): Political history of India; Samanta system and changes in political structure; economy; social structure; culture; religion.
10. Themes in early Indian cultural history: languages and texts; major stages in the evolution of art and architecture; major philosphical thinkers and schools; ideas in science & Technology and mathematics.
11. Kalinga War; Kharavela-achievements.
12. Political History of Orissa (c.4th Century AD – 7th Centry AD).

Section-B

15. The 13th Century: The Ghorian invasions. Factors behind Ghorian success, Economic, social and cultural consequences; Foundation of Delhi Sultanate. The "Slave" Dynasty. Iltutmish; Balban; Early Sultanate architecture.

16. The 14th Century: Alauddin Khalji's conquests, agrarian and economic measures; Muhammad Tughluq's major "projects"; Firuz Tughluq's concessions and public works; Decline of the Sultante; Foreign contacts: Ibn Battuta.

17. Economy Society and Culture in the 13th and 14th centuries. Caste and slavery under Sultanate, Technological changes, Sultanate architecture, Persian literature: Amir Khusrau, Historiography; Zia-ud--din Barani. Evolution of a composite culture, Sufism in North India, Lingayats, Bhakti schools in the south.

eclecticism: Dara Shukoh, Vaishnav Bhakti, Maharashtra Dharma. Evolution of the Sikh community (Khalsa).

24. Medieval Orissa: The Bhaumakaras and the Somavamsis; The Imperial Gangas and Suryavamsi Gajapatis; Cult of Jagannatha.

**Paper-II**

**Section-A**

1. Establishment of British rule in India: Factors behind British success against Indian powers-Mysore, Maratha Confederacy and the Punjab as major powers in resistance; Policy of Subsidiary Alliance and Doctrine of Lapse.

2. Colonial Economy: Drain of wealth and "deindustrialisation", Fiscal pressures and revenue settlements (Zamindari, Ryotwari and Mahalwari settlements); Structure of the British Raj up to 1857 (including the Acts of 1773 and 1784 and administrative organisation).

4. Socio-cultural impact of colonial rule: Official social reform measures (1828-57); Orientalist-Anglicist controversy; coming of English education and the press; Christian missionary activities; Bengal Renaissance; Social and religious reform movements in Bengal and other areas; Women as focus of social reform.

5. Economy 1858-1914: Railways; Commercialisation of Indian agriculture; Growth of landless labourers and rural indebtedness; Famines; India as market for British industry; Customs removal, exchange and countervailing excise; Limited growth of modern industry.

6. Early Indian Nationalism: Social background; Formation of national associations; Peasant and tribal uprising during the early nationalist era; Foundation of the Indian National Congress; The Moderate phase of the Congress; Growth of Extremism; The Indian Council Act of 1909; Home Rule Movement; The Government of India Act of 1919.

7. Inter-War economy of India: Industries and problem of Protection; Agricultural distress; the Great Depression; Ottawa agreements and Discriminatory Protection; the growth of trade unions; The Kisan Movement; The economic programme of the Congress; Karachi resolution, 1931.

8. Nationalism under Gandhi's leadership: Gandhi's career, thought and methods of mass mobilisation; Rowlatt Satyagraha, Khilafat, Non
Cooperation Movement, Civil Disobedience Movement, 1940 Satyagraha and Quit India Movement; States’ People's Movement.

9. Other strands of the National Movement:
   a) Revolutionary movements since 1905; (b) Constitutional politics; Swarajists, Liberals, Responsive Cooperation; (c) Ideas of Jawharlal Nehru, (d) The Left (Socialists and Communists); (e) Subhas Chandra Bose and the Indian National Army; (f) Communal strands: Muslim League and Hindu Mahasabha; (g) Women in the National Movement.

11. First phase of Independence (1947-64): Facing the consequences of Partition; Gandhiji's murder; economic dislocation; Integration of States; The democratic constitution, 1950; Agrarian reforms; Building an industrial welfare state; Planning and industrialisation; Foreign policy of Non-alignment; Relations with neighbors.

Section-B

13. Enlightenment and Modern ideas

1. Renaissance Background
2. Major Ideas of Enlightenment: Kant, Rousseau
3. Spread of Enlightenment outside Europe
4. Rise of socialist ideas (to Marx)

14. Origins of Modern Politics

1. European States System
3. French revolution and aftermath, 1789-1815.
4. British Democratic Politics, 1815-1850; Parliamentary Reformers, Free Traders, chartists.

15. Industrialization
1. English Industrial Revolution: Causes and Impact on Society
2. Industrialization in other countries: USA, Germany, Russia, Japan

16. **Nation-State System**
1. Rise of Nationalism in 19th century
2. Nationalism : state-building in Germany and Italy
3. Disintegration of Empires through the emergence of nationalities.

17. **Imperialism and Colonialism**
1. Colonial System (Exploitation of New World, Trans-Atlantic Slave Trade, Tribute from Asian Conquests)
2. Types of Empire: of settlement and non-settlement: Latin America, South Africa, Indonesia, Australia.
3. Imperialism and Free Trade: The New Imperialism

18. **Revolution and Counter-Revolution**
1. 19th Century European revolutions
2. The Russian Revolution of 1917-1921
3. Fascist Counter-Revolution, Italy and Germany.
4. The Chinese Revolution of 1949

19. **World Wars**
1. 1st and 2nd World Wars as Total Wars: Societal Implications
2. World War I : Causes and Consequences
3. World War II : Political Consequence

20. **Cold War**
1. Emergence of Two Blocs
2. Integration of West Europe and US Strategy; Communist East Europe
3. Emergence of Third World and Non-Alignment
4. UN and Dispute Resolution

21. **Colonial Liberation**
1. Latin America-Bolivia
2. Arab World-Egypt
3. Africa-Apartheid to Democracy
4. South-East Asia-Vietnam

22. Decolonization and Underdevelopment
1. Decolonization: Break up of colonial Empires: British, French, Dutch
2. Factors constraining Development : Latin America, Africa

23. Unification of Europe
1. Post-War Foundations : NATO and European Community
2. Consolidation and Expansion of European Community/European Union.

24. Soviet Disintegration and the Unipolar World
3. End of the Cold War and US Ascendancy in the World
4. Globalization
Section A - Food & Nutrition.

5. Food spoilage: Causes of food spoilage and food contamination. Food adulteration and food poisoning measuring quality of food, control of food quality (Codex Alimentarius, Bureau of Indian standards(BIS) FPO, Ag mark, ISI).

Section B - Human Development and Family Studies.

3. Development of children (0-5 years). Speech development, Social development, Personality development (Role of family, School, Community and Mass Media).

5. Adolescent Development: Physical and sexual development, Social and Emotional changes, Development of aspiration and achievement, Personality development and Family relationships.

PAPER – II

Section A - (i) Family Resource Management

3. Housing and Interior decoration: Selection of site, house layout, floor plans, space distribution with reference to activities, building components and materials. Furnishing: types (furniture, curtains and draperies, wall treatment, floor covering, upholstery, lighting), planning, obtaining information, evaluating cost, principles of interior designing followed in furnishing the house.

(ii) Textile and clothing -

5. Fiber to Fabric: Construction yarn making process, Types of yarns, fabric construction techniques, Weaving, parts of loom, Types of weaves; Fabric finishes (textural finishes, functional finishes) Different dyeing and printing methods.

6. Wardrobe Planning, Colour combination in textile designing, criteria of selection of clothes for different age groups, climatic conditions and occasions for men, women and children.

Section B - Home Science Extension Education

3. Programme planning: Meaning, nature, principle and scope of programme planning, steps of making a programme characteristic of a good programme planning programme implementation and evaluation.

5. Community Development: Concept, scope, principles and limitation of Community development and Community Organization, Subject matter of community development, Community Development programmes—objectives, principles and types of community development programmes, Role of Panchayati Raj, Village Schools, Cooperatives, Mahila mandals, Youth and farmers club, Self help Groups, Government and non-Governmental agencies in Extension programmes.

6. Teaching & Learning in extension: Education, extension teaching methods, classification and selection of appropriate method, feature, advantage and limitation of different methods of teaching (mass, group, individual) Audio-visual aids—planning, selection and types of visual, audio and audio-visual aids contribution of audio-visual aids in extension teaching.
Constitutional Law of India

1. Preamble and nature of Indian Constitution
2. General ideas on the fundamental rights
3. Right to equality
4. Right to freedom of speech and expression
5. Right to life and personal liberty
6. Right to Constitutional Remedies
7. Directive principles of State Policies and Fundamental Duties
8. Constitutional position of the President and relation with the Council of Ministers
9. Governor and his Powers
10. Appointment and Transfer of Judges of the Supreme Court and the High Court
11. Supreme Court and High Courts: Powers and Jurisdiction
12. Union Public Service Commission and State Public Service Commissions: Powers and Functions
13. Distribution of Legislative Powers between the Union and the States
14. Administrative Relationship between Union and the States
16. Civil Servants: Constitutional safeguards
17. Parliamentary Privileges
18. Amendment of the Constitution
19. Principle of Natural Justice
Section-B

International Law

1. Nature and Definition of International Law
   Relationship between International Law and Municipal Law
2. Individuals, Nationality, Statelessness; Human Rights and procedures available for their enforcement
3. State Recognition and State Succession
4. Treaties: Formation, application & termination
5. United Nations: Its principal organs, powers, and functions:
   General Assembly & Security Council
6. Concept of Human Rights
   Universal Declaration of Human Rights, 1948
7. International Covenant on Civil and Political Rights, 1966
9. International Commission on Human Rights

Paper-II

Section-A

Law of Crimes:

1. General Principles of Criminal Liability: mens rea and actus reus, Mens rea in statutory offences
2. Stages of Crime: Preparations and criminal attempts
3. General Exceptions
4. Joint and constructive liability
5. Abetment
6. Criminal conspiracy
7. Offences against the State
8. Offences against public tranquility
9. Offences against human body
10. Offences against property
11. Offences against Women
12. Defamation

**Law of Torts:**
1. Nature and definition
2. Liability based upon fault & strict liability
3. Vicarious liability, State Liability
4. General defences
5. Joint tortfeasors
6. Negligence
7. Defamation
8. Nuisance
9. Conspiracy
10. False imprisonment
11. Malicious Prosecution

---

**Section-B**

**Law of Contracts and Mercantile Law**
1. Formation of Contract
2. Factors vitiating consent
3. Void, Voidable, illegal and unenforceable agreements
4. Performance and discharge of contracts
5. Quasi-contracts
6. Consequences of breach of contract
7. Contract of Agency
8. Sale of goods and hire purchase
9. Formation and dissolution of partnership
10. Negotiable Instruments Act, 1881
   Negotiable Instruments meaning, Promissory Note, Bill of exchange, Cheque, crossing of cheques and Dishonor of cheques.
LITERATURE OF THE FOLLOWING SUBJECTS

Note (i)- In regard to the languages included in the Eighth Schedule to Constitution, the scripts are given below :-

<table>
<thead>

</tr>
</tbody>
</table>

Note (ii)- Candidates should note that the questions not required to be answered in a specific language will be answered in English.
Objective: The syllabus consists of two papers generally covering the period 1600 – 2000 in English Literature. It is designed to test the ability of the candidate at first-hand and critical reading of the major texts/authors belonging to the period.

Paper - I

Total Number of questions in the paper will be eight. All questions will carry equal marks. The questions will be divided into two Groups: Group-A and Group-B. In each Group there will be four questions.

The candidate shall answer five questions in all. One question in each Group will be compulsory. The candidate will be required to answer three more questions, choosing at least one from each Group. In this way, at least two questions will be attempted from each Group i.e. one compulsory question plus one more. One compulsory question will be the short answer type, another shall be analysis of an unseen passage/poem.

The candidate shall be required to answer five questions in all selecting at least one from each Group.

Group A

1. Shakespeare  |
   King Lear  | OR  | The Tempest

2. Marlowe  |
   Dr Faustus

3. John Webster  |
   The Duchess of Malfi

4. John Donne

5. John Milton  
   *Paradise Lost* Bks I, II

6. Alexander Pope  
   *Rape of the Lock*

7. William Wordsworth

**Group B**

8. Jonathan Swift  
   *Gulliver’s Travels*

9. Jane Austen  
   *Pride and Prejudice*

10. Charles Dickens  
    *Hard Times*

11. Thomas Hardy  
    *Tess of the D’Urbervilles*

12. George Eliot  
    *The Mill on the Floss.*
Paper II

Group-A

1. W.B.Yeats

2. T.S.Eliot
   *The Waste Land* OR *Four Quartets*

3. Indian Poets
   Kamala Das : “My Grand Mother’s House”, “The Looking Glass”
   Nissim Ezekiel : “Enterprise”, “Night of the Scorpion”
   R.Parthasarathy : “from Trial”, “from Home Coming”
   A K Ramanujam : “Love Poem for a Wife I”, “A River”

4. John Osborne : *Look Back in Anger*

5. Samuel Beckett: *Waiting for Godot*

6. Henrik Ibsen : *A Doll’s House*

7. August Strindberg : *Father*
Group-B

8    James Joyce : Portrait of the Artist as a Young Man
9    E M Forster : A Passage to India
10   Gopinath Mohanty : The Ancestor (translation Arun K Mohanty. Published by Central Sahitya Akademi)
11   Chinua Achebe : Things Fall Apart
12   V.S. Naipaul : A House for Mr. Biswas
1. History of Hindi Language and Nagari Lipi.

II. Development of Braj and Awadhi as literary language during medieval period.

III. Early form of Khari-boli in Siddha-Nath Sahitya, Khusero, Sant Sahitya, Rahim etc. and Dakhini Hindi.

IV. Development of Khari-boli and Nagari Lipi during 19th Century.

V. Standardization of Hindi Bhasha & Nagari Lipi.

VI. Development of Hindi as National Language during freedom movement.

VII. The development of Hindi as a National Language of Union of India.

VIII. Scientific & Technical development of Hindi Language.

IX. Development of Hindi as Media Language.

X. Prominent dialects of Hindi and their inter-relationship.

XI. Salient features of Nagari Lipi and the efforts for its reform & Standard form of Hindi.
Section-B

2. History of Hindi Literature.

I. The relevance and importance of Hindi literature and tradition of writing History of Hindi Literature.

II. Literary trends of the following four periods of history of Hindi Literature.

A : Adikal - Sidh, Nath and Raso Sahitya.
    Prominent poets - Chandvardai, Khusero, Vidyapati.

B : Bhaktikal - Sant Kavyadhara, Sufi Kavyadhara, Krishna Bhaktidhara and Ram Bhaktidhara.
    Prominent Poets - Kabir, Jayasi, Sur & Tulsi.

C: Ritikal : Ritibaddhakavya & Riti Mukta Kavya.
    Prominent Poets - Keshav, Bihari, Padmakar and Ghananand.

D : Adhunik Kal
    a. Renaissance, the development of Prose, Bharatendu Mandal.
       Prominent Poets : Maithili Sharan Gupta, Prasad, Nirala, Mahadevi, Dinkar, Agyeya, Muktibodh, Nagarjun.

III. Katha Sahitya

A. Upanyas & Realism

B. The origin and development of Hindi Novels.

C. Prominent Novelists : Premchand, Jainendra, Yashpal, Renu and Bhism Sahani.

D. The origin and development of Hindi short story.

E. Prominent short Story Writers : Premchand, Prasad, Agyeya, Mohan Rakesh & Mannu Bhandari.

IV. Drama & Theatre

A. The origin & Development of Hindi Drama.

C. The development of Hindi Theatre.
V. Criticism
   B : Prominent critics : Ramchandra Shukla, Hajari Prasad Dwivedi, Ram Vilas Sharma & Nagendra.

VI. The other forms of Hindi prose - Lalit Nibandh, Rekhachitra, Sansmaran, Yatra-vrittant.

Paper-II

Answers must be written in Hindi.

This paper will require first hand reading of prescribed texts and will test the critical ability of the candidates.

Section-A

1. Kabir : Kabir Granthawali, Ed, Shyam Sundar Das (First hundred Sakhis.)
2. Surdas : Bhramargeetsar, Ed. Ramchandra Shukla (First hundred Padas)
5. Bihari : Bihari Ratnakar Ed. Jagannath Prasad Ratnakar (First 100 Dohas)
6. Prasad : Kamayani (Chinta and Shraddha Sarg)
8. Dinkar : Kurukshetra
9. Agyeya : Angan Ke Par Dwar (Asadhya Veena)
Section-B

2. Mohan Rakesh : Ashad Ka Ek Din

3. Ramchandra Shukla : Chintamani (Part I)
   (Kavita Kya Hai, Shraddha Aur Bhakti)

4. Premchand : Godan, Premchand ki Sarvashreshtha
   Kahaniyan, Ed. Amrit Rai.

5. Prasad : Skandgupta

6. Yashpal : Divya

7. Phaniswar Nath Renu : Maila Anchal

8. Mannu Bhandari : Mahabhoj

9. Nibandh Nilaya : Edited by Dr. Satyendra
   (Bal Krishna Bhatt, Premchand, Gulab Rai,
   Hajari Prasad Dwivedi, Ram Vilas Sharma,
   Agyeya, Kuber Nath Rai)
ORIYA

Paper-I

Answers must be written in Oriya.

Section-A

History of Oriya Language

(i) Origin and development of Oriya Language; Influence of Austric, Dravidian, Perso-Arabic and English on Oriya Language.

(ii) Morphology: Morphemes (free, bound and complex), derivational and inflectional affixes.

(iv) Syntax: Kinds of sentences and their transformations, structure of sentences.

(v) Semantics-Different types of change in meaning; Euphemism.

(vi) Common errors in spellings, grammatical uses and construction of sentences.

Section-B

History of Oriya Literature

(i) Historical backgrounds (social, cultural and political) of Oriya Literature of different periods.

(ii) Ancient epics, ornate kavyas and padavalis.

(iii) Typical structural forms of Oriya Literature (Koili, Chautisa, Poi, Chaupadi, Champa).

(iv) Impact of renaissance with special reference to poetry, fiction and essay.
Paper-II

Answers must be written in Oriya.

Critical Study of texts -

The paper will require firsthand reading of the text and test the critical ability of the candidate.

Section-A

Poetry

(Ancient)
1. Sarala Das-Gadaparva from Mahabharata.

(Medieval)
3. Dinakrushna Das-Rasakallola- (Chhandas-16 & 34)
4. Upendra Bhanja-Lavanyabati (Chhandas-1 & 2)

(Modern)
5. Radhanath Ray-Chilika,
6. Mayadhar Manasinha - Mahanadire Jyotsna Vihar
7. Satchidananda Routray- Bajiraut
8. Ramakanta Ratha-Saptama Rutu,

Section-B

Drama :
9. Manoranjan Das- Klanta Prajapati
10. Bijay Mishra-Tata Niranjana

Novel :
11. Fakir Mohan Senapati-Chhamana Athaguntha
12. Gopinath Mohanty-Danapani
Short Story

13. Surendra Mohanty-Maralara Mrutyu (first five stories)
14. Manoj Das-Laxmira Abhisara (first five stories)

Essay:

15. Chittaranjan Das-Taranga O Tadit (first five essays).
16. Chandra Sekhar Rath-Mun Satyadharma Kahuchhi (first five essays)
PAPER - I

There will be two questions which must be answered in Persian. The remaining questions must be answered either in Persian or in the medium of examination opted by the candidate.

SECTION – A

1. (a) Description of the origin and development of Persian language
(To be answered in Persian)
(b) Applied grammar, Rhetorics, Prosody, Idioms and Phrases frequently used.

SECTION – B

1. Short essay in Persian, 250 words (to be answered in Persian)

PAPER – II

There will be two compulsory questions one each in textual portions of prose and poetry which are to be answered in Persian. The remaining questions are to be answered either in Persian or in the medium of examinations opted by the candidate. This paper will require first hand reading of the texts prescribed and will be designed to test the candidates critical ability.

SECTION – A

PROSE

1. Nizami Arooz Samarquandi : Chahar Maquala.
   (i) Dabiri,
   (ii) Shairi

2. Qabus washmgir : Qabus Nama
   (i) Dar-shinakhtan-e-Haqq-e-Pidar-wa-Madar,
   (ii) Dar Bishi Justan Az Sukhandani,
   (iii) Dar Talib Ilmi-wa-Faqih wa Fuqaha

3. Sadi Shirazi : Gulistan
   (i) Dar Tasir-e-Suhbat

4. Mohammed Awfi : Jawamiul Hikayat
   (i) First six Hikayat

   (i) Fida-e-watan,
   (ii) Rah-e-Nau
   (iii) Sir Syed Ahmed Khan
   (iv) Guftagu-e-Yak Nafar-e-Iran
   (v) Tareekh-e- Adabiyat-e-Iran.
POETRY

1. Firdausi : Shahnama
   (i) Rustum-wa-Sohrab

2. Umar Khayyam : Rubaiyat
   (Radif- Alif & Be)

3. Sadi Shirazi : Bostan,
   Hikayat Dar Tadbeer-e-Padshahan-wa-Takheer Kardan Dar Siyasat.

4. Ameer Khusrau : Dewan-e-Khusyau
   (Radif Alif)

5. Maulana Roam : Masnawi Maanawi
   (First half of first volume)

6. Hafiz Shirazi : (Radif Alif)

7. Urfi Shirazi – Quasaid
   (i) Har Sokhta Jane Ke Ba Kashmir-Dar Ayad
   (ii) Shabe Eid Ke Dar Takyagah-e-Naz-o-Neyam.

8. Allamah Iqbal
   (i) Asrar-e-Khudi

9. Bahar Mashhadi :
   (i) Sukoot-e-Shab
   (ii) Dukhtar-e-Basra

10. Manuchehri :- Quasaid- (Radif Laam & Meem)

11. Syed Ashraf Rushti : Bekas Watan –
NOTE: Textual portions of prose and poetry are to be explained in Persian Compulsorily.

**SANSKRIT**

**Paper-I**

There will be three questions as indicated in the question paper which must be answered in Sanskrit. The remaining questions must be answered either in Sanskrit or in the medium of examination opted by the candidate.

**Section-A**

1. Significant features of the grammar, with particular stress on the following subjects: (to be answered in Sanskrit)
   
   (a) Samjna – It, Savarna, Ti, Upadha, Samhita, Vrddhi, Guna, Pratipadika, Sarvanama,
   
   (b) Sandhi - Ac, Hal, Visarga,
   
   (c) Karaka,
   
   (d) Samasa,
   
   (e) Vacyas – Kartari, Karmani and Bhave (voice usages)

2. Origin and development of Sanskrit language
   
   (a) Classification of Indo-European languages
   
   (b) Main characteristics of Vedic Sanskrit language.
   
   (c) Prominent features of Classical Sanskrit language.
   
   (d) Contribution of Sanskrit to linguistic studies.

3. General Knowledge of Literary History of Sanskrit and Principal trends of literary criticism.
   
   (a) History of Vedic Literature (Samhita, Brahmana, Aranyaka and Upanisads)
   
   (b) Ramayana, Mahabharata
   
   (c) The origin and development of literary genres of:

   Mahakavya - Asvaghosa, Kalidasa, Bharavi, Magha, Sriharsa, Bhatti,
   
   Rupaka (drama) – Bhasa, Kalidasa, Bhavabhuti, Harsa,
   
   Visakhadatta, Sudraka, Bhattanarayana, Murari,

   Katha – Dandin, Subandhu, Bana,

   Akhyayika – Bana,
Campu – Nalacampu, Campuramayan,  
Khandakavya – Meghaduta and Hamsaduta,  
Muktaka Kavya.  
Kathasahitya (Fables and Fairytales) – Brhatkatha,  
Kathasaritsagara, Pancatantra, Hitopadesa,  
Vetalapancavimsati, Dvatriimsatputtalika.  

Section-B

4. Essentials of Indian Culture with stress on  
a) Purusarthas-  
b) Samskaras-  
c) Varnasramavyavastha  
d) Arts and fine arts  
e) Technical sciences  
f) Kautilya’s Arthasastra, Adhikarana-I, Prakarana-I, Adhyaya-II – Vidyasamuddesah - Anviksiki Sthapana; Prakarana-VII, Adhyaya-XI – Gudhapurusotpattih,  

5. Trends of Indian Philosophy  
General outlines on  
a) Sankhya  
b) Yoga  
c) Nyaya  
d) Vaisesika  
e) Mimamsa  
f) Vedanta  
g) Carvaka  
h) Jaina  
i) Baudhha  

6. Short Essay in Sanskrit (within 300 words)  

7. Unseen passage with the questions, to be answered in Sanskrit.
Paper-II

Question from Group 5 is to be answered in Sanskrit only. Question from Groups 1, 2, 3 and 4 are to be answered either in Sanskrit or in the medium opted by the candidate.

Section-A

General study of the following groups:-

**Group 1**
- a) Raghuvamsam-Kalidasa
- b) Kumarasambhavam-Kalidasa
- c) Kiratarjuniyam-Bharavi
- d) Sisupalavadham-Magha
- e) Naisadhiyacaritam-Sriharsa
- f) Kadambari-Banabhatta
- g) Dasakumaracaritam –Dandin
- h) Sivarajyodayam-S.B. Varnekar

**Group 2**
- a) Isavasyopanisad
- b) Kathopanisad-I Ch.-III, Valli- Verses 10 to 15
- c) Bhagavadgita
- d) Sundarakanda of Valmiki’s  Ramayana

**Group 3**
- a) Svapnavasavadattam- Bhasa
- b) Abhijnanasakuntalam- Kalidasa
- c) Mrcchakatikam-Sudraka
- d) Mudraraksasam-Visakhadatta
- e) Uttararamacaritam- Bhavabhuti
- f) Ratnavali-Sriharsavardhana
- g) Venisamharam- Bhattanarayana

**Group 4**
- Short notes in Sanskrit on the following:-
  - a) Buddhacaritam – Asvaghos
  - b) Meghadutam-Kalidasa
  - c) Nitisatakam-Bhartrhari
  - d) Pancatantram- Visnusarma
  - e) Rajatarangini-Kalhana
  - f) Harsacaritam-Banabhatta
  - g) Amarukasatakam-Amaruka
  - h) Gitagovindam-Jayadeva

**Group 5** General outlines on
(a) Samkhya Karika, (b) Tarkasamgraha, (c) Vedantasara, (d) Manusmrti.

**Section-B**

Questions from Groups 1 and 2 are to be answered in Sanskrit only. (Questions from Groups 3, 4 and 5 are to be answered in Sanskrit or in the medium opted by the candidate).

This Section will require first hand reading of the following selected texts :-

**Group 1** (a) Raghuvamsam-Canto I, Verses 1 to 10
(b) Kumarasambhavam-Canto I, Verses 1 to 10
(c) Kiratarjuniyam-Canto I, Verses 1 to 10

**Group 2** (a) Isavasyopanisad-Mantras-1, 2, 4, 6, 7, 15 and 18
(b) Bhagavatgita II chapter-verses 13 to 25
(c) Sundarakandam of Valmiki’s Ramayana, Canto 15, Verses 15 to 30 (Geeta Press Edition)

**Group 3** (a) Buddhacaritam – Canto-III (1 to 10 verses)
(b) Meghadutam-Purvamegha -verses 1 to 10
(c) Nitisatakam-Verses 1 to 10 (Edited by D.D. Kosambi (Bharatiya Vidya Bhavan Publication)
(d) Kadambari-Sukanasopadesa (only)

**Group 4** (a) Svapnavasavadattam Act VI
(b) Abhijnansakuntalam Act IV verses 15 to 30 (M.R. Kale Edition)
(c) Uttararamacaritam Act 1 verses 31 to 47 (M.R. Kale Edition)

**Group 5** (a) Samkhya Karika – Pancavimsatih tattvani,
(b) Tarkasamgraha – Padarthanirupanam,
(c) Vedantasara – Adhikarirupanam,
(d) Manusmrti-II – Aryavarta, Brahmavarta, Brahmacaridharmah.

General Note – (for both the papers) At least two questions should be answered in Sanskrit selecting one from each section. Devanagari script should be used for answering in Sanskrit.
Paper-I

Answers must be written in Urdu.

Section-A

Development of Urdu Language

a) Development of Indo-Aryan (i) Old Indo-Aryan (ii) Middle Indo Aryan (iii) New Indo Aryan

b) Western Hindi and its dialects Brij Bhasha Khadi Boli, Haryanavi Theories about the origin of Urdu Language

c) Dakhani Urdu-Origin and development, its significant linguistic features.

Section-B

a) Genres and their development : (i) Poetry : Ghazal, Masnavi, Qasida, Marsia, Rubai, Jadid Nazm,

(ii) Prose : Dastan, Novel, Short Story, Drama, Inshaiya, Khutoot, Biography.

b) Significant features of : (i) Deccani, Delhi and Lucknow schools (ii) Sir Syed movement, Romantic movement, Progressive movement, Modernism (iii) Development of Urdu prose and poetry in Orissa

c) Literary Criticism and its development with reference to Hali, Shibli, Kaleemuddin Ahmad, Ehtisham Hussain, Ale-Ahmad Suroor.

d) Essay writing (covering literary and imaginative topics)
Paper-II

Answers must be written in Urdu.

This paper will require first hand reading of the texts prescribed and will be designed to test the candidate's critical ability.

**Section-A**

1. Mir Amman - Bagho-Babar
2. Ghalib - Intikhab-e-Khutoot-e Ghalib
4. Prem Chand - Godan
5. Krishan Chander - Ann Data
6. Abul Kalam Azad - Ghubar-e-Khatir

**Section-B**

2. Mir Hasan - Sahrul Bayan
3. Ghalib - Diwan-e-Ghalib
4. Iqbal - Bal-e-Jibrail
5. Firaq - Gul-e-Naghma
6. Faiz - Dast-e-Saba
7. Ali Sardar Jafri - Patthar-ki-Diwar
The candidate should make a study of the concept and development of management as science and art drawing upon the contributions of leading thinkers of management and apply the concepts to the real life of government and business decision making keeping in view the changes in the strategic and operative environment.

Section-A

II. Organisational Behaviour and Design: Classical and Neoclassical Systems, Delegation of Authority, Design of Strategic Business Units. Theories of motivation and their relevance: Hierarchy of need model, Factor theory, Sources of motivation, Achievement, Power, Money, Affiliation, Communication: Barriers and gateways. Leadership: characteristics, transformational leader and transactional leader, Leader as change agents Understanding group behaviour and group dynamics. Behaviour in small groups, Conflict Management, Managing Change, Innovation in Organizational Design such as Networks, Knowledge Based Enterprises-Systems and Processes.

**Section-B**

Paper-II

Section-A

Section-B

MATHEMATICS

Paper-I

Section – A

1. Abstract Algebra :
   (i) Integers, Congruences.
   (iii) Rings, Integral Domain, Field, Subring, Homomorphism, Ideal, Principal Ideal Ring, Maximal Ideal, Polynomial rings, Unique Factorization Theorem.

2. Linear Algebra :
   (i) Vector space, Linear dependence, Independence, Subspaces, Basis, Dimension, Finite Dimensional Vector space, Linear Transformation, Rank-nullity Theorem.

3. Analytic Geometry :
   (i) 2-D Geometry : Straight lines, Pairs of lines, Circle, System of Circles, Conic sections.
   (ii) 3-D Geometry : Planes, Lines, Skew-lines, Sphere, Intersection of Plane and sphere, Cone, Cylinder, Conicoids, Tangent plane to conicoids .

Section - B

1. Real and Complex Analysis :
   (i) Real Analysis : Real number system, Order relation, Bounds, l.u.b. g.l.b., Cauchy sequence, Completeness, Compactness, Continuity, Uniform Continuity of functions, Riemann-Theory of Integration, Fundamental Theorem of calculus, Convergence of sequence and series, Uniform convergence.
   (ii) Complex Analysis : Analytic function, Cauchy Riemann Equation, Cauchy Integral Formula, Taylor, Laurent’s series, Singuralities, Poles, residues, Contour Integral.
2. **Calculus**

(i) Functions of one variable: Limit, Continuity, Differentiability, Mean-value theorem, Maxima, Minima.
(ii) Asymptotes and Curvatures: Rectification, Area, Volume and Surface area of revolution (Equations in Cartesian and Parametric forms only)
(iii) Functions of several variables: Limit, Continuity, Differentiability, Jacobians, Euler’s theorem.
(iv) Improper integrals: Convergence, Gamma and Beta functions./
(v) Multiple integrals: Double and Triple integrals and their Evaluations.

3. **Vector Analysis**

(i) Dot and Vector products, Vector and scalar Triple Products.
(ii) Differentiation of Vector functions, Divergence, Gradient, Curl of Vectors (in Cartesian forms only).
(iii) Green, Gauss and Stokes theorems and applications.
(iv) Tangent, normal and binormal of curves in space, serret-frenet formulas.

**Paper – II**

**Section – A**

1. **Numerical Analysis**

(i) Interpolation: Lagrange, Newton divided difference forms, Forward and backward interpolation polynomials.
(ii) Approximations: Least squares approximations and curve fitting.
(iii) Numerical solution of non-linear equations: Bisection, Secant, Newton-Raphson and fixed point iteration techniques.
(v) Numerical solution of I.V.P.: Euler method, Taylor’s method, Runge-Kutta Method of order two

2. **Graph Theory**

3. **Ordinary and Partial differential equations.**

(i) Linear first order O.D.E.
(ii) Higher order linear differential equations with constant and variable coefficients.
(iii) Series solution of O.D.E.
(iv) Solution of O.D.E. by Laplace transformation techniques.
(v) Solution of equations \( Pdx + Qdy + Rdz = 0 \) and \( dx/P = dy/Q = dz/R \)
(vi) Char pits method for partial differential equations.
(vii) Linear second order P.D.E. and solutions.

---

**Section – B**

1. **Computer programming :**

(i) Flow charting and algorithms.
(ii) Basics of Fortran language, arithmetic and logical operations, Arithmetic and Logical Statements.
(iii) GO TO and Computed GO TO Statements, Arithmetic and Logical IF, IF... THEN....ELSE Statements, DO Loops.
(iv) Arrays and subscripted variables.
(v) Functions, Subprograms and Subroutines.
(vi) Programme writing in Fortran.

2. **Mechanics and Hydrodynamics.**

(i) Statics : Law of parallelogram of forces, Equilibrium of forces, Couple and Moments, Frictions.
(ii) Dynamics : Laws of motion, D’ Alemberts principle, Motion of a particle in a plane, Projectiles, Motion of rigid bodies, Moment of inertia.

3. **Operations Research :**

(i) Formulation of L.P.P., Graphical solution.
(ii) Simplex method and Duality.
(iii) Transportation and Assignment problems.
1. **Theory of Machines**

2. **Mechanics of Solids:**

3. **Engineering Materials:**

4. **Manufacturing Science**:

Pattern, Gating and risering system, casting defects, special casting process, welding:- Gas welding, arc welding, resistance welding, thermit welding, Tool geometry and nomenclature ASA, ORS and NRS, types of chips, cutting variable, Chip reduction coefficient, Merchant’s force diagram, velocity relationship and Kronenberg’s relationship. Ernest & Merchant angle relationship, Lee-shafer relationship-cutting fluid, Tool wear, Taylor’s tool life equation, Economics of metal machining, Jigs and fixtures.

NC, CNC, ECM, EDM, AJM, USM; LBM, Plasma machining, High energy rate forming.

5. **Manufacturing management**:

Production Planning and Control, Forecasting-Moving average, exponential smoothing, Operations sheduling; assembly line balancing. Product development. Breakeven analysis, Capacity planning. PERT and CPM.

Value Engineering : Value analysis, for cost/value. Total quality management and forecasting techniques. Project management.

6. **Elements of computation**:

---

**Paper-II**

1. **Thermodynamics**:

Basic concept. Open and closed systems, Applications of Thermodynamic Laws, (Zeroth, First and Second Laws), Gas equations, Clapeyron equation, Availability, Irreversibility and Tds relations, reciprocating air compressors.
2. **I.C. Engines, Fuels and Combustion:**

Spark ignition and compression ignition engines, Four stroke engines and Two stroke engines, mechanical, thermal and volumetric efficiency, Heat balance.

3. **Heat Transfer, Refrigeration and Air Conditioning**

4. **Turbo-Machines and Power Plants**

Continuity, Momentum and Energy Equations. Adiabatic and Isentropic flow, fanno lines, Rayleigh lines. Theory and design of axial flow turbines and compressors, Flow through turbo-machine balde, cascades, centrifugal compressor. Dimensional analysis and modelling. Selection of site for steam, hydro, nuclear and stand-by power plants, Selection base and peak load power plants, Modern High pressure, High duty boilers, Draft and dust removal equipment, Fuel and cooling water systems, heat balance, station and plant heat rates, operation and maintenance of various power plants, preventive maintenance, economics of power generation.
PHILOSOPHY

PAPER – I

Section-A

History of Philosophy (Western)

4. Spinoza : Substance, Attribute, Modes, Pantheism.
5. Leibnitz : Monads, Pre-established Harmony.
<table>
<thead>
<tr>

</table>
Paper – II

Section-A

Socio-Political Philosophy

1. Political Ideals : Equality, Justice, Liberty,
2. Individual and State.
3. Democracy : Concept and Forms.
4. Socialism and Marxism.
5. Humanism.
8. Theories of Punishment.
10. Gender Equality.
Section – B

Philosophy of Religion

3. Grounds for Disbelief in God and their criticisms.
7. Soul, Disembodied Existence and Immortality.
1. Classical Mechanics

(a) Particle dynamics

Centre of mass and laboratory coordinates, conservation of linear and angular momentum. The rocket equation. Rutherford scattering, Galilean transformation, inertial and non-inertial frames, rotating frames, centrifugal and Coriolis forces, Foucault pendulum.

(b) System of particles

Holonomic and non-holonomic constraints, degrees of freedom, generalised coordinates and momenta. Lagrange's equation and applications to linear harmonic oscillator, simple pendulum and central force problems. Cyclic coordinates, Hamiltonian, Lagrange's equation from Hamilton's principle.

(c) Rigid body dynamics

Eulerian angles, inertia tensor, principal moments of inertia. Euler's equation of motion of a rigid body, force-free motion of a rigid body. Gyroscope.

2. Special Relativity, Waves & Geometrical Optics

(a) Special Relativity

Michelson-Morley experiment and its implications. Lorentz transformations-length contraction, time dilation, addition of velocities and Doppler effect, mass-energy relation and its simple application to decay process. Minkowski diagram, four dimensional momentum vector.

(b) Waves

(c) **Geometrical Optics**

3. **Physical Optics**

(a) **Interference**

Interference of light-Young's experiment, Newton's rings, interference by thin films, Michelson interferometer. Multiple beam interference and Fabry-Perot interferometer. Holography and simple applications.

(b) **Diffraction**

Fraunhofer diffraction-single slit, double slit, diffraction grating, resolving power. Fresnel diffraction - half-period zones and zones plates. Fresnel integrals. Application of Cornu's spiral to the analysis of diffraction at a straight edge and by a long narrow slit. Diffraction by a circular aperture and the Airy pattern.

(c) **Polarisation and Modern Optics**

**Section-B**

4. **Electricity and Magnetism**

(a) **Electrostatics and Magnetostatics**

(b) **Current Electricity**

5. **Electromagnetic Theory & Black Body Radiation**

(a) **Electromagnetic Theory**

(b) **Blackbody radiation**

6. **Thermal and Statistical Physics**

(a) **Thermodynamics**

(b) **Statistical Physics**

Paper-II

Section-A

1. Quantum Mechanics I

2. Quantum Mechanics II & Atomic Physics

(a) Quantum Mechanics II

Particle in a three dimensional box, Eigen values and eigen functions of angular momentum operators, spherical harmonics. The hydrogen atom. Half angular momentum and spin.

(b) Atomic Physics

3. Molecular Physics

Section-B

4. Nuclear Physics

5. **Particle Physics & Solid State Physics**

(a) **Particle Physics**

Classification of elementary particles and their interactions. Conservation laws. Quark structure of hadrons. Field quanta of electroweak and strong interactions. Elementary ideas about Unification of Forces, Planck mass, Planck length, Planck time, Planck temperature and Planck energy.

(b) **Solid State Physics**

Cubic crystal structure. Band theory of solids—conductors, insulators and semiconductors. Elements of superconductivity, Meissner effect, Josephson junctions and applications. Elementary ideas about high temperature superconductivity.

6. **Electronics**

POLITICAL SCIENCE AND INTERNATIONAL RELATIONS

Paper-I

Political Theory

Section-A

1. Approaches to the study of political theory: historical, normative and empirical.

2. Theories of state: Liberal, , Marxist, , Post-colonial.

4. Democracy: Democratic theory-classical and contemporary

5. Human Rights: Theories of Human Rights; Theories of Justice, Equality and Revolution, Political obligation;

6. Theories of Political Culture and Political Economy.

7. Political Ideologies: Nature of Ideology; Liberalism, Socialism, Marxism, Fascism and Gandhism.

8. Theories of Power and Hegemony: Pareto, Mosca, Mitchels, C. Wright Mills, Weber and Gramsci.

9. Indian Political Thought: Manu, Kautilya, M.N. Roy, Gandhi and Ambedkar

Section-B

Indian Government and Politics

1. Indian Nationalism: Raja Ram Mohan Roy, Dadabhai Naoroji, Tilak, Gandhi, Nehru, Subhas Bose and Ambedkar.

2. Indian freedom struggle: Constitutionalism, Revolutionary movements Non Co-operation, Civil Disobedience and Quit India, Role of women in freedom struggle.

4. Socio-economic dimensions of the nationalist movement: The communal question and the demand for partition; backward caste movements, Trade union and Peasant movements, Civil rights movement.

6. The Executive System: President, Prime Minister and the Council of Ministers; Governor, Chief Minister and the State Council of Ministers. The Bureaucracy.

8. Judiciary: The Supreme Court and the High Courts; Judicial Activism;

10. Party System: ideology and social base of parties; fragmentation and regionalization; patterns of coalition politics; trends in electoral behaviour; Pressure groups;

11. Class, caste, backward class and Dalit movements; Tribal people’s movements, gender in Indian politics and women’s movements; ethnicity; communalism, and politics of regionalism.
12. Planning and Socio- Economic Development: Role of the Planning Commission; Socio- political dimensions of economic reforms.

14. State Politics in Orissa: Social bases of Oriya Nationalism; Freedom Movement and Praja Mandal Movements, in Orissa; Integration of Princely States in Orissa; Coalition Politics, People’s Movement and Women’s Movement.

**Paper - II**

**International Politics**

**Section-A**

**International Politics**

1. International System: Evolution; The Modern State and Sovereign State System

3. Theories of International politics: Idealist, Realist, Systems, Decision-making and Game Theory.

5. Origin and decline of Cold War, New World Order.

6. Major issues of world politics: Cuban Missile Crisis; Vietnam War, Oil Crisis, Collapse of the Soviet Union, Yugoslav Crisis Afghan Crisis, Iraq War,.

7. Non-alignment: Nonaligned Movement; Its relevance in the post cold war era.

8. Disarmament and Arms Control;

9. The evolution of the international economic order-from Bretton woods to WTO, the North-South dimension.

10. UN and its specialized agencies

11. Regional organizations: ASEAN, EU, SAARC

Section-B

India and the World

1. Indian Foreign Policy: Historical origins, determinants; the institutions of policy-making; continuity and change.

2. The Non-Alignment Movement: India’s Contribution to NAM; Its contemporary relevance.

3. India and the major powers: USA, EU, China, and Russia.

5. Conflict and co-operation in South and South East Asia: Kashmir, SAARC, ASEAN

6. India’s Nuclear Policy: PNE, NPT, CTBT

7. India and the UN System: India’s role in UN Peace Keeping and global disarmament.

8. India and the international economic order; WTO, IMF, IBRD, Globalization
Paper-I

Foundations of Psychology

Section-A

1. Introduction: Psychology as a Science: Definitions and perspective. Psychology in relation to other social and natural sciences. Use of interdisciplinary approach.

3. Research methods and quantitative analysis: Major steps in psychological research (problem statement, hypothesis formulation, research design, sampling, tools of data collection, analysis and interpretation and report writing). Methods of data collection (interview, observation, questionnaire and case study). Application of statistical techniques (t-test, one-way ANOVA, correlation and chi-square tests).

5. Attention and perception: Attention – Determinants of attention including set and characteristics of stimulus. Definition and concept of perception, biological and cultural factors in perception. Perceptual organisation-influence of past experiences, Perceptual defence Space and depth perception, size estimation and perceptual readiness.

7. Memory: Concepts and definition of memory and forgetting, 7+/-2 concept and chunking; Encoding, storage and retrieval. Factors influencing retention and forgetting. Theories of forgetting (Repression, Decay and Interference theories).
Section-B

9. **Intelligence and Aptitude**: Concept and definition of Intelligence and aptitude, Nature and theories of intelligence. Measurement of Intelligence and aptitude. Concepts and measurement of emotional and multiple intelligence.

11. **Personality**: Concept and definition of personality. Theories of personality (psychoanalytical, humanistic, behaviouristic, trait and type approaches). Measurement of personality (projective tests, self-report measures). The Indian approach to Personality. Training for personality development.

12. **Language and Communication**: Human language-properties, structure and linguistic hierarchy, Language acquisition-predisposition, critical period hypothesis. Theories of language development (Skinner, Chomsky). Process and types of communication. Effective communication and training.

13. **Attitudes, Values and Interests**: Definitions, concepts of attitudes, values and interests. Formation and maintenance of attitudes. Measurement of attitudes, values and interests. Techniques of attitude change, strategies for fostering values.

---

**Paper-II**

**Psychology : Issues and Applications**

**Section-A**

2. **Well being and Mental Disorders** : Concept of health, positive health, well being and ill health. Mental disorders (Anxiety disorders, mood disorders, schizophrenia and delusional disorders; personality disorders, substance abuse disorders). Causal factors in mental disorders. Factors influencing positive health, well being, life style and quality of life.

6. **Community Psychology** : Definition and concept of Community Psychology. Role of community psychologists in social change. Use of small groups in social action. Arousing community consciousness and action for handling social problems. Group decision making and leadership for social change.

**Section-B**

8. **Application of Psychology to disadvantaged groups** : The concepts of disadvantaged, deprivation and socially deprived. Social, physical, cultural and economic consequences of disadvantaged and deprived groups. Educating and motivating the disadvantaged towards development.

10. **Application of psychology in Information Technology and Mass media**

The present scenario of information technology and the mass media boom and the role of psychologists. Selection and training of psychology professionals to work in the field of IT and mass media. Multilevel marketing. Impact of TV and fostering value through IT and mass media. Psychological consequences of recent developments in Information Technology.

11. **Application of Psychology in the field of Defence**

The concept of Military psychology, Aviation psychology and Psychological warfare. Role of Military psychologists in the defence. Selection, recruitment and training of personnel. Facilitating the process of adjustment of personnel to military life. Role of Counselling. Devising Psychological tests for defence personnel. Psychological disorders due to war. Human engineering in Defence.

12. **Psychology and Economic development**

13. **Application of psychology to environment and related fields**

Environmental psychology-effects of noise, pollution and crowding. Population psychology-psychological consequences of population explosion and high population density. Motivating for small family norms. Impact of rapid scientific and technological growth on degradation of environment.

14. **Other applications of psychology**

PUBLIC ADMINISTRATION

Paper-I

Administrative theory

Section-A

1. **Basic Concepts**: Meaning, Scope and Significance of Public Administration; Public and Private Administration; Evolution of the discipline; New Public Administration; Public Choice Approach; State versus Market; New Public Management Perspective; Good Governance.

3. **Structure of Public Organisations**: Chief Executives – types, functions; Forms of Public Organisations – Ministries and Departments, Corporations, Companies, Boards, Commissions; Headquarters and Field Relationship; Line and Staff.

4. **Administrative Behaviour**: Leadership, Policy Formulation, Decision Making, Communication, Motivation, Morale.

5. **Accountability and Control**: Concepts; Legislative, Executive and Judicial Control; Citizen and Administration; Civil Society, People’s Participation, Right to Information; Corruption in Administration, Machinery for redressal of Citizens’ grievances, Citizens’ Charter.
Section – B

6. **Administrative Law and Administrative Reforms**: Delegated Legislation; Administrative Adjudication; Administrative Reforms – Process, Techniques, O & M, Work study, Work management, Information Technology.;

7. **Comparative Public Administration and Development Administration**: Comparative Public Administration – Meaning, Nature, Scope; Models – Bureaucratic and Ecological; Development Administration – Meaning, Nature and Scope; Bureaucracy and Development; Development Administration and Administrative Development.

8. **Public Policy**: Relevance of Public Policy; Process of Policy Formulation; Policy Implementation; Evaluation.

9. **Personnel Administration**: Objectives; Recruitment, Training, Position Classification, Performance Appraisal, Promotion, Pay and Service Conditions, Employer-employee relations, Grievance redressal mechanisms, Integrity; Code of Conduct.

10. **Financial Administration**: Budget – Concepts, Forms, Formulation, Execution; Performance Budgeting; Accounts; Audit.
1. **Evolution of Indian Administration**: Ancient Period, Medieval Period, Modern Period up to 1947.

3. **Central Administration in India**: President; Prime Minister, Council of Ministers; Central Secretariat; Cabinet Secretariat; Prime Minister’s Office; Ministries and Departments, Advisory Bodies, Boards and Commissions, Field Organisations, Planning Commission, Finance Commission, Election Commission.

4. **State Administration with special reference to Orissa**: Governor, Chief Minister, Secretariat, Chief Secretary, Directorate, District Administration, Block Administration.

5. **Local Government**: Evolution; 73rd and 74th Constitutional Amendments; Rural and Urban Local Governments in Orissa – Structures, Functions, Finances, Problems and Prospects; Major Rural and Urban Development Programmes and their management.
Section – B

6. **Public Services**: All India Services – Constitutional Provision, Role, Functions; Central Services – Nature, Functions; Recruitment, Training, Promotion, Union Public Service Commission; State Services; Orissa Public Service Commission.

7. **Control of Public Expenditure**: Parliamentary Control, Estimates Committee, Public Accounts Committee, Committee on Public Undertakings, Comptroller and Auditor General of India, Ministry of Finance.

10. **Major Issues in Indian Administration**: Centre-State Relations; Political and Permanent Executive Relations; Administrative Culture and Ethics; Corruption in Indian Administration – Lok Pal and Lok Ayuktas; Environmental Issues – Disaster Management; Criminalisation of Politics and Administration; New Economic Policy and Public Undertakings; IT and Indian Administration.
Foundations of Sociology

1. Sociology - The Discipline: Sociology as a science and as an interpretative discipline; impact of Industrial and French Revolution on the emergence of sociology; sociology and its relationship with history, economics, political science, psychology and anthropology.

2. Scientific Study of Social Phenomena: Problem of objectivity and value neutrality; issue of measurement in social science; elements of scientific method - concepts, theory and fact, hypothesis; research designs - descriptive, exploratory and experimental, content analysis.

3. Techniques of data collection and analysis: Participant and quasi-participant observation; interview, questionnaire and schedule case study, sampling - size, reliability and validity, scaling techniques - social distance and Likert scale.

4. Pioneering contributions to Sociology:

   a) Karl Marx: Historical materialism, alienation and class struggle.

   b) Emile Durkheim: Division of labour, social fact, religion and society, suicide.

   c) Max Weber: Social action, ideal types, authority, bureaucracy, protestant ethic and the spirit of capitalism.

   d) Talcott Parsons: Social system, pattern variables.

   e) Robert K. Merton: Latent and manifest functions, anomie, conformity and deviance, reference groups.

5. Marriage and Family: Types and forms of marriage; family-structure and function; personality and socialization; Social control; family, lineage, descent and property; changing structure of family and marriage in modern society; divorce and its implications; role conflicts.

6. Social Stratification: Concepts - hierarchy, inequality and stratification; theories of stratification - Marx, Davis and Moore and Melvin Tumin’s critique; forms and functions; class - different conceptions of class; class-in-itself and class-for-itself; caste and class; caste as a class.
7. **Social Mobility**: Types of mobility-open and closed models; intra-and inter-generational mobility; vertical and horizontal mobility; social mobility and social change.

8. **Economic System**: Sociological dimensions of economic life; the impact of economic processes on the larger society; social aspects of division of labour and types of exchange; features of pre-industrial and industrial economic system; industrialisation and social change; social determinants of economic development.

9. **Political System**: The nature of power-personal power, community power, power of the elite, class power, organisational power, power of the un-organised masses; authority and legitimacy; pressure groups and political parties; voting behaviour; modes of political participation-democratic and authoritarian forms.

10. **Educational System**: Education and Culture; equality of educational opportunity; social aspects of mass education; problems of universalisation of primary education; role of community and state intervention in education; education as an instrument of social control and social change; education and modernisation.

11. **Religion**: Origins of religious beliefs in pre-modern societies; the sacred and the profane; social functions and dysfunctions of religion; monistic and pluralistic religion; organised and unorganised religions; semitism and antisemitism; religion, sect and cults; magic, religion and science.

12. **Social Change and Gender Issues**: Social construction of gender, Equality vs. Differences, impact of globalization on women, emergence of feminist thought, gender issues.
1. Historical Moorings of the Indian Society:

Traditional Hindu social organisation; socio-cultural dynamics through the ages; impact of Buddhism, Islam, and the West, factors in continuity and change.

2. Caste System:

Origin of the caste system; cultural and structural views about caste; mobility in caste; caste among Muslims and Christians; change and persistence of caste in modern India; issues of equality and social justice; views of Gandhi and Ambedkar on caste; caste on and Indian polity; Backward Classes Movement; Mandal Commission Report and issues of social backwardness and social justice; emergence of Dalit consciousness, backward caste movement.

3. Class Structure:

Class structure in India, agrarian and industrial class structure; emergence of middle class; emergence of classes among tribes; elite formation in India.

4. Marriage, Family and Kinship:

Marriage among different religious and tribal groups, its changing trends and its future; family-its structural and functional aspects-its changing forms; regional variations in kinship systems and its socio-cultural correlates; impact of legislation and socio-economic change on marriage and family; generation gap.

5. Agrarian Social Structure:

Peasant society and agrarian systems; land tenure systems-historical perspectives, social consequences of land reforms and green revolution; feudalism-semi-feudalism debates; emerging agrarian class structure; peasant movements.

6. Industry and Society:

Path of industrialisation, occupational diversification, trade unions and human relations; market economy and its social consequences; economic reforms liberalisation, privatisation and globalisation.
7. Political Processes:

Working of the democratic political system in a traditional society; political parties and their social base; social structural origins of political elites and their orientations; regionalism, pluralism and national unity; decentralisation of power; panchayati raj and nagarpalikas and 73rd and 74th constitutional amendments.

8. Education:

Directive Principles of State Policy and primary education; educational inequality and change; education and social mobility; the role of community and state intervention in education; universalisation of primary education; Total Literacy Campaigns; educational problems of disadvantaged groups.

9. Religion and Society:

Size, growth and regional distribution of different religious groups; educational levels of different groups; problems of religious minorities; communal tensions; secularism; conversions; religious fundamentalism, religious reform movements.

10. Tribal Societies:

Distinctive features of tribal communities and their geographical spread; problems of tribal communities—land alienation, health and nutrition, education; tribal development efforts after independence; tribal policy-isolation, assimilation and integration; issues of tribal identity.

11. Social Change and Development:

Endogenous and exogenous sources of change and resistance to change; processes of change-sanskritisation and modernisation; agents of change-mass media, education and communication; problems of change and modernisation; structural contradictions and breakdowns; Migration, Determinants and consequences of population growth, population policy and family welfare programmes, child welfare programmes.

12. Major Social Issues:

Poverty, indebtedness, bonded labour, unemployment, depletion of forests, development related displacement, corruption, alcoholism, AIDS, drug addiction, violence against women, dowry. Child labour; Maternal and infant mortality rate in Orissa.
STATISTICS

PAPER - I

Section – A

Probability :

Unit - I

Sample space and events, probability measure and probability space, random variable as a measurable function, distribution function of a random variable, discrete and continuous-type random variable, probability mass function, probability density function, vector-valued random variable, marginal and conditional distributions, stochastic independence of events and of random variables, expectation and moments of a random variable, conditional expectation, convergence of a sequence of random variables in distribution and in probability almost everywhere, their criteria and inter-relations, Borel-Cantelli lemma, Chebyshev’s and Khinchine’s weak law of large numbers, strong law of large numbers and Kolmogorov’s theorem, Glivenko-Cantelli theorem.

Unit - II

Probability generating function, characteristic function, inversion theorem, Laplace transform, determination of distribution by its characteristic function, Lindberg and Levy forms of central limit theorem, standard discrete and continuous probability distributions, their inter-relations and limiting cases. (Bernoulli, Binomial, Negative binomial, Poisson, Normal, Cauchy, Beta and Gamma), Exponential family of distributions and their properties.

Linear Models and Multivariate Analysis

Unit – III

Linear statistical models, theory of least squares and analysis of variance, Gauss-Markov theorem, normal equations, least squares estimates and their properties, test of significance and interval estimates based on least squares theory in one-way, two-way and three-way classified data, regression analysis, linear regression, curvilinear regression and orthogonal polynomials, multiple regression, multiple and partial correlations, estimation of variance and covariance components, MINQUE theory.
Unit - IV

Multivariate normal distribution, Marginal and conditional distributions, Distributions of linear and quadratic functions of multivariate normal, Independence of the distribution of quadratic functions. Wishart’s distribution, Mahalanobis $D^2$ and Hotelling’s $T^2$ statistics and their applications and properties, discriminant analysis, canonical correlations, principal component analysis, elements of factor analysis.

Section – B

Statistical Inference

Unit-I

Unit - II

Non-randomised and randomised tests, critical functions, MP tests, Neyman-Pearson lemma, UMP tests, monotone likelihood ratio, generalised Neyman-Pearson lemma, similar regions and unbiased tests, UMPU tests for single and several-parameter families of distributions, likelihood ratio and its large sample properties, chi-square goodness of fit test and its asymptotic distribution. Confidence bounds and its relation with tests. Kolmogorov’s test for goodness of fit and its consistency, sign test, Wilcoxon signed-rank test and their consistency, Kolmogorov-Smirnov two-sample test, run test, Wilcoxon-Mann-Whitney U-test and median test, their consistency and asymptotic normality. Wald’s SPRT and its properties, OC and ASN functions, Wald’s fundamental identity, application to Binomial, Poisson and Normal distributions only.
Sampling Theory and Design of Experiments

Unit - III

An outline of fixed-population and super-population approaches, distinctive features of finite population sampling, sampling designs, simple random sampling with and without replacement, stratified random sampling, systematic sampling and its efficiency for structural populations, cluster sampling, two-stage and three-stage sampling, ratio, product and regression methods of estimation involving one or more auxiliary variables, two-phase sampling, probability proportional to size sampling with and without replacement, the Hansen-Hurwitz and the Horvitz-Thompson estimators, non-negative variance estimation with reference to the Horvitz-Thompson estimator, non-sampling errors, Warner’s randomised response technique.

Unit - IV

Fixed effect model (one-way and two-way classification), random and mixed effect models (one-way and two-way classification), Basic principles of design, CRD, RBD, LSD and their analyses and efficiencies, missing plot technique, factorial designs : $2^a$, $3^2$ and $3^3$, confounding in factorial experiments, split-plot, strip-plot and simple lattice designs, incomplete block designs, concepts of orthogonality and balance, BIBD.
PAPER – II

Section - A

Industrial Statistics

Unit – I

Process and product control, general theory of control charts, different types of control charts for variables and attributes, concept of 3σ limits, \( \bar{X} \), \( R \), \( s \), \( p \), \( np \) and \( c \) charts, cumulative sum chart, V-mask. Single, double, multiple and sequential sampling plans for attributes, OC, ASN, AOQ and ATI curves, concepts of producer’s and consumer’s risks, AQL, LTPD and AOQL, sampling plans for variables, use of Dodge-Romig table.

Unit – II

Quantitative Economics and Official Statistics

Unit – III

Concept of time series, additive and multiplicative models, Determination of trend, seasonal, cyclical and random components, Box-Jenkins method, tests for stationery of series, ARIMA models and determination of orders of autoregressive and moving average components, forecasting.

Commonly used index numbers:- Laspeyre's, Paasche's and Fisher's ideal index numbers, chain-base index number, uses and limitations of index numbers, index number of wholesale prices, consumer price index number, index numbers of agricultural and industrial production, test for index numbers like proportionality test, time-reversal test, factor-reversal test, circular test and dimensional invariance test.

General linear model, ordinary least squares and generalised least squares methods of estimation, problem of multicollinearity, consequences and solutions of multicollinearity, autocorrelation and its consequences, heteroscedasticity of disturbances and its testing, test for independence of disturbances.
Unit – IV

Present official statistical system in India relating to population, agriculture, industrial production, trade and prices, methods of collection of official statistics, their reliability and limitation and the principal publications containing such statistics, various official agencies responsible for data collection and their main functions.

Section – B :

Optimization Techniques

Unit – I

Different types of models in Operational Research, their construction and general methods of solution, simulation and Monte-Carlo methods, the structure and formulation of linear programming (LP) problem, simple LP model and its graphical solution, the simplex procedure, the two-phase method and the M-technique with artificial variables, the duality theory of LP and its economic interpretation, sensitivity analysis, transportation and assignment problems, rectangular games, two-person zero-sum games, methods of solution (graphical and algebraic). Replacement of failing or deteriorating items, group and individual replacement policies, concept of scientific inventory management and analytical structure of inventory policies.

Unit – II

Simple models with deterministic and stochastic demand with and without lead time, storage models with particular reference to dam type. Homogeneous discrete-time Markov chains, simple properties of finite Markov chains, transition probability matrix, classification of states and ergodic theorems, homogeneous continuous-time Markov chains, Poisson process, elements of queueing theory, M/M/1, G/M/1 and M/G/1 queues.

Demography and Psychometry

Unit – III

Demographic data from census, registration, NSS and other surveys, and their limitations and uses; definition, construction and uses of vital rates and ratios, measures of fertility, reproduction rates, morbidity rate, standardized death rate, Infant mortality rate, nuptiality, complete and abridged life tables, construction of life tables from vital statistics and census returns, uses of life tables, logistic and other population growth curves, fitting of a logistic curve, population projection, stable population quasi-stable population techniques in estimation of demographic parameters, morbidity and its
measurement, standard classification by cause of death, health surveys and use of hospital statistics, health statistics.

Unit - IV

Methods of standardization of scales and tests, Z-scores, standard scores, T-scores, percentile scores, intelligence quotient and its measurement and uses, validity of test scores and its determination, use of factor analysis and path analysis in psychometry.
UNIT – I - Non-chordata:

General features: General organization and classification if invertebrates (up to order); Origin of metazoa; Origin of coelom-acoeolomata, pseudocoelomata and eucelomata, protostomes and deuterostomes; Symmetry in animals.

Protozoa: Locomotion, nutrition and reproduction in protozoa; Parasitic protozoa; Life history of *Paramaecium*, *Monocystis*, *Plasmodium* and *Trypanosoma*.

Porifera: Canal system; Skeleton; Reproduction in sponges.

Coeleenterata: Polymorphism in coelenterata; Coral and coral reefs; Structure and life history of *Obelia* and *Aurelia*.

Helminthes: Structure and life history of *Fasciola*, *Taenia* and *Ascaris*; Parasitic adaptations.

UNIT – II - Non chordata

Annelida: Metamerism; Coelom; Segmental organs; Structure and life history of *Nereis*, earthworm and leech; Excretory and nervous system of annelida.

Arthropoda: Structure and affinities of Peripatus; Structure and life history of Palaemon, scorpion and cockroach; Larval forms and parasitism in crustacea; Vision in insects; Respiration in arthropoda; Mouth parts of insects.

Mollusca: Foot and respiration in mollusca; Torsion and detorsion in gastropoda; Structure and life history of *Pila*, *Sepia*, *Unio*. 
**UNIT - III**  
**Chordata**

**General features**: General organization and classification of chordata up to order; Origin of chordata.

**Protochordata**: Salient features and affinities of protochordate groups (hemichordata, cephalochordata and urochordata).

**Cyclostomes and Pisces**: Structure and affinities of cyclostomes and Dipnoi; Lateral line receptors; Accessory respiratory structures; Scales; Migration in fishes; General features of *Scoliodon* and *Anabas*.

**Amphibia**: Origin and evolution of amphibia; Neoteny; Parental care; Structural peculiarities and affinities of Urodela and Apoda.

**UNIT – IV**  
**Chordata**

**Reptiles**: Origin of reptiles; Adaptive radiation; Skull types; Poisonous and non-poisonous snakes of India; Mechanism of snake bite; Venom composition and mode of action; *Sphenodon*.

**Aves**: Origin of birds; Flight adaptation; Migration; Palate; Flightless birds.

**Mammals**: Origin of mammals; Dentition; Aquatic mammals; Prototheria and Metatheria.

**Comparative anatomy**: Origin and evolution of aortic arches, heart, brain, kidney, skin and endocrine glands (Pituitary, thyroid, parathyroid, adrenal and gonads) in different vertebrate groups.

**Section – B**

(Ecology, Ethology, Bio-statistics and Economic Zoology)

**UNIT – I**

**Ecology**: Concept and components of ecosystem (energy flow, food chain, food web, ecological pyramids and productivity); Abiotic factors (soil, light and temperature); Biotic factors; Biogeochemical cycles (carbon, nitrogen and sulphur); Ecological niche; Biotic community; Concept of population,
Ecological succession; Pollution of air, water and soil, Global warming; Ozone layer depletion; Acid rain.

**Biodiversity**: Types of biodiversity (α, β and γ); Mega biodiversity countries; Biodiversity indices; Key stone species; Biodiversity conservation (*in situ* and *ex situ*); Germplasm conservation; Intellectual property rights and patents; Biodiversity hot spots in India; Resource management; Wildlife and its management; Endangered species; Wildlife in Orissa.

**UNIT – II**

**Ethology**: Concept and method of studying animal behavior; Role of hypothalamus, hormones and pheromones in regulation of behavior; Physiological basis of behavior; Types and Mechanism of learning; Biochemical basis of memory; Social behavior in insects and primates; Biological clock; Courtship, mating and parental care; Orientation; Navigation; Homing and migration; Tidal, seasonal and circadian systems.

**UNIT – III**

**Economic Zoology** : Apiculture; Sericulture; Lac culture; Induced breeding and carp culture; Pearl culture; Fresh water prawn culture; Insect and rodent pests of crops and stored grains and their control; Major infectious and communicable diseases (malaria, tuberculosis, cholera, plague, AIDS), their vectors, pathogens and prevention; Helminth parasites in man.

**UNIT – IV**

**Bio-statistics**: Methods of sampling; Graphical representation of data; Measurement of central tendency; Standard deviation; Standard error; Probability distributions (Binomial, Poisson and Normal); Null hypothesis; Tests of significance ($\chi^2$, *t*- and *F*-test); Simple correlation; Regression.

**Instrumentation**: Basic principles and applications of light microscope and electron microscope (TEM and SEM) Electrophoresis; Chromatography; Colorimetry; Autoradiography, Flame photometry, G.M. counter, Scintillation counter; Immuno electrophoresis and Immunoblotting.

**PAPER – II**

**Section – A**
UNIT – I

**Cell Biology** : Ultra structure of animal cell; Cell cycle; Ultra structure and function of cell organelles (plasma membrane, mitochondria, Golgi complex, endoplasmic reticulum, ribosome, lysosome and nucleus); Organisation of eukaryotic chromosomes; Cell division- mitosis and meiosis; Spindle and mitotic apparatus; Chromosome movement; Cancer cells.

UNIT – II

**Genetics** : Gene structure and function; Watson-Crick model; DNA replication; Mechanism of gene regulation in prokaryotes and eukaryotes; Types of RNA; Genetic code and Wobble hypothesis; Protein synthesis; Molecular basis of mutation; Mendel’s laws of inheritance; Linkage and linkage maps; Crossing over; Sex chromosomes; Sex determination, Sex-linked inheritance; Structural rearrangements; Interaction of genes; Multiple factor inheritance; Human genetics- normal and abnormal karyotypes; Genes and diseases.

UNIT – III

**Evolution** : Origin of life; Evidences and theories of organic evolution (Darwinism, Lamarckism); Natural selection; Synthetic theory of Evolution; Hardy-Weinberg law; Genetic drift; Mimicry, Role of mutation and isolation in evolution; Fossilization and dating of fossils; Evolution of horse, elephant and camel; Ancestry of man.

**Systematics** : Species concept; Principles of classification; Biological nomenclature; International code of Zoological Nomenclature(ICZN); Importance of anatomy, cytology, biochemistry and physiology in taxonomy; Molecular taxonomy and Numerical taxonomy; Theories of distribution of animals; Zoogeographical realms of the world.

UNIT – IV

**Molecular Biology and Biotechnology** : Recombinant DNA, Restriction endonucleases, cloning technology : Plasmids, cosmids and Phagemids as cloning vectors; c-DNA; DNA
sequencing, RAPD, RFLP analysis and Human genome project; Polymerase chain reaction and DNA fingerprinting; Signal transduction.

Biotechnology in the Welfare of human race; Gene library; Production of transgenic animals and genetically modified organisms; Application of biotechnology in medicine, waste management and food production; Industrial biotechnology and production of biopharmaceuticals; Gene therapy and new age medicines.

Section – B

UNIT – I

Biochemistry: Structure of carbohydrates, lipids, amino acids, proteins and nucleic acids; Saturated and unsaturated fatty acids; Cholesterol; Glycolysis; Krebs cycle; Electron transport and oxidative phosphorylation; Cyclic AMP, its structure and role; Classification of enzymes, enzyme action and kinetics; Vitamins; Coenzymes; Membrane structure and function, pH and buffers, Henderson-Hasselbach equation; Thermodynamics and living processes, ATP and Bioenergetics.

UNIT – II

Physiology and Endocrinology: Composition of blood; Pigments of respiration; Blood coagulation; Blood groups; \( \text{O}_2 \) and \( \text{CO}_2 \) transport; Cardiac cycle; Breathing and its regulation; Structure of nephron; Urine formation; Acid-base balance; Structure of neuron; Conduction of impulse through the axon and synapse; Neurotransmitters; Mechanism of vision and hearing; Structure and mechanism of contraction of skeletal muscles; Digestion and absorption of principal food stuff; Function of pituitary, thyroid, parathyroid, adrenal, pancreas, and gonads; Pheromones in insects and mammals; Biosynthesis, regulation of secretion and mechanism of action of steroid and peptide hormones, Hormones of G-I tract; neuropeptides; Physiology of reproduction and artificial insemination; Homeostasis.

UNIT – III
**Developmental Biology**: Ultra structure of gametes; Gametogenesis; Types of eggs; Fertilization; Cleavage; Gastrulation and fate maps of frog and chick; Mammalian placenta and its function. Organizer concept, Organogenesis of central nervous system, heart and kidney in vertebrates; Stem cells and mechanism of differentiation; Morphogenesis and morphogen, Genetic regulation of development; Homeotic genes; ageing, cell death and programmed cell death; Metamorphosis in frog and insects—Cellular, Biochemical and Physiological features; Regeneration; Blastogenesis; *in vitro* fertilization and embryo transfer.

**UNIT – IV**

**Microbiology**: Structure of prokaryotes, Cellular organization of bacteria; Bacterial cell wall; Classification of bacteria; Bacterial transformation, transduction, conjugation, transfection; Antibiotics and their mode of action; Structure, classification, molecular architecture of virus(TMV, T₄ and λ virus); lysogeny and lytic phages; Bacterial and viral diseases.

**Immunology**: Innate and acquired immunity; Antigen antibody interaction; Types of antibody; Primary and secondary immunity, B and T cells, Humoral and cell-mediated immune response; Hypersensitivity, Autoimmunity and auto immune diseases, Transplantation immunology; Vaccines and their preparation; Immunobiology of cancer.
